Journal of Islamic Philosophy

## Mission Statement

The Journal of Islamic Philosophy encourages the academic study of Islamic philosophy. The journal provides a unique peer-reviewed forum for scholars interested in the philosophical study of diverse topics in Islamic philosophy. Classical Islamic philosophy of past masters will be re-examined with a new focus. The underlying issues regarding the many ethical, metaphysical, existential, and epistemological challenges posed by western philosophy will be explored in comparison to Islamic philosophy. We hope to serve as an impetus toward the renewal of the rich and dynamic spirit of Islamic philosophical discourse in the current era.

Mohammed Rustom

It is now safe to say that Mullā Ṣadrā no longer needs an introduction to students of Islamic philosophy. This is a relatively recent phenomenon, thanks to the efforts of a number of scholars over the past five decades. Today, almost all of Ṣadrā's works are available in print, and many of these titles have found their way into critical editions, courtesy by and large of the Tehran-based Sadrā Islamic Philosophy Research Institute (SIPRIn). SIPRIn also continues to publish, in Persian, monographs on Șadrā as well as a journal dedicated almost exclusively to him. In terms of works on Șadrā in European languages, there are a plethora of books and articles. In English alone, we have some eighteen books on him, ${ }^{1}$ and at least eleven of his works are available in translation. ${ }^{2}$

Despite the vast amount of research that has already been done, there are many facets of Ṣadräs thought that are as yet unexplored, or concerning which we still do not have a complete picture. These often have to do with aspects of what can be called his "religious thought."

[^0]While some important studies have been carried out in this regard, particularly with respect to his eschatology, many crucial questions remain unaddressed. What, for example, is the relationship between Ṣadrä's philosophy and his numerous writings on the Qurān and Hadith? What is his attitude toward Islamic law, one of the many disciplines in which he was thoroughly conversant? How indebted is he to his Sufi predecessors, such as 'Ayn al-Quḍāt Hamadānī, Ibn 'Arabī, Ṣadr al-Dīn al-Qūnawī, and Dāwūd al-Qayṣarī? What, precisely, is his relationship to the other giants of $\operatorname{Shi}_{i}^{-}$i thought, namely Nașīr al-Dīn al-Ṭūsī, Sayyid Haydar Āmulī, Ibn Turka Iṣfahānī, and Ibn Abī Jumhūr Aḥsā̄̄̄? How have Ṣadrā’s works influenced the religious worldview of his "opponents," particularly Shaykh Aḥmad Aḥsā̄̄̄?

The articles presented here seek to investigate some of these and other cognate questions. Maria Dakake's piece presents us with the most in-depth investigation into Șadräs understanding of walāya, or sanctity, which emerges amidst the broader context of a discussion of the hierarchical nature of his ontology and epistemology.

David Burrell's essay navigates its way through Șadrä's ontology, offering translations of some key passages from al-Hikma al-mutáāliya fi l-asfār al-‘aqilyya al-arbaca in order to demonstrate Sadrä's concern with being vis-à-vis the God-creature relationship. Thus, Burrell's article can be seen as a useful exploration into the importance of Șadrā’s ontology not just for philosophy, but also for philosophical theology.

Turning again to the theme of walāya, Shigeru Kamada inquires into the manner in which Ibn 'Arabī influenced Ṣadrä’s treatment of "sainthood." Yanis Eshots' article also brings Ṣadrā and Ibn 'Arabī into conversation with one another, this time treating, in comparative perspective, two key concepts in their thought-"substantial motion" and "new creation" respectively. Zailan Moris's paper examines Sadrä's eschatological teachings as presented in one of his later and certainly more "popular" works, al-Hikma al-‘arshiyya. It also seeks to clarify the links between Sadrä’s eschatological ideas and those of Suhrawardī and Ibn 'Arabī.

My article offers a comprehensive inquiry into the structure and content of Sadräs Qurānic writings. The annotations on these works illustrate how significant Ṣadräs tafsīr writings and theoretical
compositions are in terms of their treatment of key ideas, range of sources employed, and complex chronology.

Following the articles are reviews of four of the more recent books in the field of Șadrā studies. Among the reviewers of these works we have not only scholars of Islamic philosophy, but also specialists in analytic philosophy and comparative Western philosophy-surely a positive indicator of Ṣadräs broad appeal.

We are hopeful that the Journal of Islamic Philosophy's special issue on Mullā Ṣadrā will spawn further interest in his work, particularly the relatively understudied dimension of his religious thought. But, just as important, we also hope that the questions raised here will help draw the attention of students of philosophy and intellectual history to the vast riches of the later period of Islamic thought.

# Hierarchies of Knowing in Mullā Ṣadrā's <br> Commentary on the Ușūl al-kāfī 

Maria Massi Dakake

Sadr al-Dīn al-Shīrāzī was one of the most intellectually independent philosophers of his time. Though influenced by many well-developed strands of thought in Islamic intellectual his-tory-the Peripatetic and Illuminationist schools of philosophy, as well as a number of different mystical traditions, including those of Abū Ḥāmid al-Ghazālī and Ibn al-'Arabī-he was able to create a synthetic whole that did not merely reconcile these divergent perspectives, but rather used them as reference points for his own mystico-philosophical perspective. Mullā Șadrā, however, unlike most of the mystical and philosophical thinkers who influenced his thought, was an Imāmī Shīíl. Despite the struggles he may have had with some of the Shíl authorities of his day, the nature of which continue to be a matter of scholarly debate, ${ }^{1}$ he embraced the principal doctrines of the Imāmī school of thought, and revered the Imāms as infallible sources of spiritual guidance. In this article, I explore the relationship between Mullā Ṣadrảs metaphysics of knowledge and his own Shíi confessional views through an analysis of his commentary on a major work of Shîí canonical tradition-Kulaynīs Ușūl al-käfi-with a particular emphasis on his commentary on the chapter entitled, "The Superiority of Knowledge" (Fadl al--ilm). Before turning to his commentary, however, it is useful to present some of the key questions about Ṣadräs life and thought that complicate our understanding of his adherence to the Imāmī $\operatorname{Shi}_{1}^{-1}$ school, and explain how our reading of his commentary on the Ușūl al-käfi might help us answer them.

Throughout his writing, Șadrā consciously strives to reconcile his own philosophical insights, and those of some of his predecessors, with the "scriptural" sources of Islam-the Qur'ān and, occasionally, the hadith literature-the latter of which, for a Shīa, include the

[^1]sayings of the Prophet and the Shīi Imāms. Yet while the centrality of the Qur'ān to Ṣadräs mystical philosophy can hardly be denied, the influence of the Imams' teachings on his thought is a harder case to make. The Imāms are mentioned somewhat rarely, relative to other important thinkers dealt with in Șadräs philosophical works. Even in Ṣadräs many works of Qurānic commentary, the teachings of the Imāms are invoked much less than one might expect. ${ }^{2}$ When he does cite the traditions of the Imāms, it is often as part of a concluding section to a metaphysical discussion in which he provides a set of transmitted or scriptural (sam'i) proof texts to support his philosophical point. ${ }^{3}$ Even in such cases, however, Șadrā does not necessarily privilege Shīíl traditions over Sunnī ones; and at times, this gives the impression that the Imāms' teachings have been mentioned as a matter of expected formality, almost as an addendum to a philosophical point. Yet, near the end of his life, Șadrā wrote his lengthy commentary on Kulayni’s canonical collection of Imāmī Shīَa traditions. The devotion of time and effort to such an endeavor seems to indicate a reverence for the traditions of the Imāms as a rich source of spiritual and religious knowledge. But if this is the case, then why do these traditions, unlike the Qurān and the works of other Islamic thinkers, have relatively little place in his philosophical works?

Perhaps more problematic, however, is the degree to which Sadrä’s gradated and fluid ontology and epistemology implicitly

2 On Șadrä's relatively limited use of Shīi hadith and tafsir literature as sources for his exegetical writing, see Mohammed Rustom, The Triumph of Mercy: Philosophy and Scripture in Mullā Ṣadrā (Albany: State University of New York Press, forthcoming), ch. 2.
3 See, e.g., Mullā Ṣadrā, al-Hikma al-mutaćāliya fil-asfär al-‘aqilyya al-arbáa, ed. Muḥammad Riḍā Muẓaffar, et al., 9 vols. (Beirut, 1981), 8:303-324 (esp. 316-317, where several traditions from the Imāms are cited); Kitäb al-mashä́cir, ed. with French translation, Henry Corbin (Tehran: Institut Français d'Iranologie de Téhéran, 1982), 58-63, where he quotes from the works of several Imāmī traditionists, including al-Ṣaffār al-Qummi’s Baṣäir al-darajāt and Kulaynỉs Ușūl al-käfi, as well as from some prominent Imāmi theologians near the conclusion of this treatise. See also James Morris, Wisdom of the Throne (Princeton, NJ: Princeton University Press, 1981), 141, where he lists some traditions from the Imāms to support his views of the pre-existence of the soul; and 'Irfän va'ārif namāyān (Kasr așnām al-jāhiliyya), trans. M. Bīdārfar (Tehran: Intishārāt-i Zahrä ${ }^{\overrightarrow{ }}, 1992$ ), 150-157, where this treatise concludes with a series of ahādìth from the Prophet and the Imāms.
contradict Twelver Shici hadith narrations on the status of the Imāms. For Twelver Shī́a, the Imāms occupy an ontological category all their own; one that exists below that of the prophets, but transcends that of ordinary human beings. This hierarchy is clearly articulated in Shīc hadith literature, which also represents this spiritual hierarchy as fixed from pre-temporal times. In Shici hadith literature, the Imām's biological connection to the Prophet was mythologized to mean that he was created from pure Muḥammadan light ( $n \bar{u} r$ Muhammadī), ${ }^{4}$ or in an alternative formulation, from a pure clay, superior to that from which other human beings were crafted. ${ }^{5}$ Thus, no matter how pious, learned, or spiritually pure an individual might be, he could never ascend to the level of the Imāms. Even if many Shīi scholars have rejected some of these mythological traditions as exaggerations, at least with regard to their literal meaning, the doctrine of the unique and superior knowledge of the Imām has continued to fund Shici conceptions of their own unique claim to religious knowledge as the community of their followers. Imāmī hadith literature indicates that the Imāms surpassed all others in knowledge, even, perhaps, the pre-Muhammadan prophets. For just as the Prophet had inherited the knowledge of all previous prophets, the Imāms were believed to have inherited the knowledge of the Prophet Muhammad, and thus the knowledge of all pre-Islamic prophets as well. ${ }^{6}$ Moreover, the Imāms were considered to be in sole possession of the true interpretation of the Qur'ān, as recorded by 'Alī b. Abī Ṭàlib from the Prophet himself, and as passed down from Imām to Imām. Beyond this, the Imāms were said to receive a form of divine knowledge and inspiration on a continuous basis. ${ }^{7}$

[^2]These traditions about the superior knowledge of the Imāms, many of which crossed the line into obvious exaggeration (ghuluww), nonetheless made it clear that the epistemological stature of the Imāms was as eternally unreachable as their ontological status. Even if we were to put aside the more exaggerated claims of the Shiri hadith literature, the epistemological superiority of the Imāms is sufficiently established in the Imāmī doctrine of the Imāms' inerrancy ('isma) in matters of religious knowledge, a quality otherwise attributed only to the prophets. The hierarchical categories of knowledge in $\mathrm{Shi}^{-}{ }^{-} 1$ thought continued below the level of the Imām, with those scholars well-versed in the teachings of the Imāms holding the highest status, followed by other devoted Shīīs, non-Shī̄ī Muslims, and everyone else. Moreover, Shīí tradition developed these hierarchical categories of knowledge in the context of an early Shici electionist perspective-well-attested in the Shīi hadith literature-according to which one's status as a Shici or a non-Shíi was considered to have been determined by God, or at least to have been established from pre-temporal times, indicating the futility of changing one's status in this life. ${ }^{8}$

Mullā Ṣadrās ontology and epistemology is also clearly hierarchical in nature, but it differs from the Imāmī Shīī perspective, particularly as found in canonical books of Shīí hadìth, in two fundamental and interrelated ways. First, the establishment of a hierarchy among men takes place in the course of earthly life, not prior to it. From Ṣadräs point of view, all human beings begin in the same place, originated in the common human mold, or fitra, and as a single "species," and are only differentiated ontologically and epistemologically through their actions and acquired knowledge in earthly life. They undergo a second "origination" after death, whereby the inner hierarchy of spiritual states acquired in this life becomes a manifest hierarchy of corresponding psychic bodies of different species. ${ }^{9}$ Second, S Sadrảs conception of a human epistemological and

8 For a discussion of this, see Maria Dakake, The Charismatic Community: Shi'ite Identity in Early Islam (Albany: State University of New York Press, 2007), 212-218.
9 Asfär, 9:19-22, where Ṣadrā claims to have obtained knowledge of these different originations through inspiration, but also considers this to be the esoteric meaning of Qur'ān 10:19: Mankind was but one community, then they differed and 59:14: . . You suppose that they are together, yet their hearts are divided. See also, Wisdom of the Throne, 144-145; S. Sadrā, Ta 'īqāt' 'alā Hikmat al-ishrāq
ontological hierarchy is predicated upon the gradated and constantly changing nature of both existence ( $w u j \bar{u} \bar{d}$ ) and spiritual knowledge, allowing for innumerable ontological levels; ${ }^{10}$ and unlike traditional Shici conceptions of spiritual hierarchy as static and fixed, Ṣadräs system assumes the possibility of a fluid and continuous movement from lower to higher states.

Given the questions discussed above, Șadräs commentary on the earliest and most comprehensive canonical collection of Shí ${ }^{-}$ hadith, Kulaynī’s Ușūl al-käfi, would seem an obvious place to look for answers. While this commentary is not complete in its extant form, what does remain offers a window onto the way in which Ṣadrā attempted to understand his lifelong religious affiliation with the Shīi school and his devotion to the Imāms in the context of his now fully developed philosophical perspective. Șadräs commentary on the first chapter of Kulayni’s collection, entitled Kitāb al-aql wa-l-jahl (The book of intellect and ignorance), contains an extensive philosophical and mystical discussion of the intellect which, of course, is foundational to his own metaphysics, as well as to that of his philosophical predecessors, and, some would argue, to the spiritual worldview of Twelver Shī ism as a whole. ${ }^{11}$

In this article, however, I have chosen to focus on Sadrās commentary on Kulaynī's chapter on the Kitäb fadl al-ilm (Superiority of knowledge). Sadrā’s commentary on this section is complete, in that he treats every hadith found in Kulayni's chapter, and it comprises nearly 400 pages of the extant Sharh. Sadrā’s commentary on this chapter is particularly relevant because, for Ṣadrā, knowledge represents the purpose and ultimate end of all human creation; it is the source and the consequence of all worthwhile human endeavor and virtue, and it alone saves. Thus Kulaynỉ's chapter offers Ṣadrā a platform from which he can address some of the epistemological issues he wrestles with in his philosophical works, as they relate to the teachings of the Shīī Imāms. Moreover, because the chapter is concerned with "knowledge" in general, rather than with the more

[^3]abstract, philosophical concept of the intellect ('aql), it provides Sadrā an opportunity to comment on some of the more mundane aspects of the role of knowledge in Islamic social life, and to offer, at times, stinging criticism of the ways in which religious knowledge was defined, measured, valued and peddled in the Safavid Shī ${ }^{-}$ society of his time.

In what follows, I begin with an overview of the key aspects of Șadrä’s philosophy of knowledge as they are represented in this commentary, including the ontological and eschatological function of knowledge in Ṣadrảs thought. From there, I discuss the implications of this theory of knowledge for the recognition of an ontological and epistemological hierarchy among human beings-a "hierarchy of knowers." In this second section I begin with an examination of Sadrä's views on various approaches to religious knowledge and his criticism of the common understanding and assessment of religious knowledge among the scholars of his own time. His criticism of these scholars is well embedded in his commentary on this chapter, and they serve as an important foil for his own philosophical claims about the significance of knowledge in religious life and in human eschatology, and for his conception of an epistemological hierarchy among human beings. From there I discuss Ṣadräs conception of spiritual knowledge among the upper echelons of the epistemological hierarchy, a conception that embraces some elements of the traditional Shīic view of spiritual hierarchy, but also departs from it in subtle, but ultimately radical, ways.

## Ṣadrä's Philosophy of Knowledge in the Sharh kitāb fadl al-ilm

 Sadrä’s epistemology as systematically formulated in his philosophical writing clearly undergirds his commentary on the Kitab fadl al-ilm. As with most aspects of his thought, Mullā Ṣadrā presents his perspective on knowledge and its significance for the human state as rooted in the Qurān and his own mystico-philosophical interpretation of the sacred text. While the Qur'ān sets out an egalitarian principle-all human beings are created according to the same primordial norm $(\text { fitra })^{12}$ and all human actions are weighed on the same scale and entail the same recompense ${ }^{13}$-it also establishes a hierarchical principle. If all human beings begin in the same[^4]place, they do not all end in the same place, and the twin bases of this teleological differentiation, as expressed in the Qurān, are the qualities of reverential piety $(\text { taqw } \bar{a})^{14}$ and knowledge. ${ }^{15}$ Are those who know and those who do not know equal? (39:9) ${ }^{16}$ the Qur'ān asks rhetorically. The answer is meant to be clear, as the Qurān directly links faith with knowledge and intellect, ${ }^{17}$ while connecting unbelief to ignorance and short-sightedness. ${ }^{18}$ The believers are those who reflect on and contemplate God's revelation in scripture and in the world around them, those who use their intellects and seek to understand. ${ }^{19}$ The unbelievers are those who refuse to see and to reflect, those who are heedless-willfully ignorant-of what is before them and what is to come. ${ }^{20}$

The role that Ṣadrā assigns to knowledge in the human spiritual vocation and spiritual destiny goes somewhat beyond the Qur'ān's explicit teachings on this matter. While the Qur'än establishes a relationship between faith and knowledge, it is nonetheless faith and good works that are specifically associated with salvation in the scriptural text, although in Islamic doctrinal formulations, true faith had to be based upon knowledge ( $m a^{〔} r i f a$ ). For Ṣadrā, however, both faith and good works are only "good" (and thus spiritually efficacious) because they are forms of knowledge. ${ }^{21}$ It is knowledge alone that is spiritually transformative and that ultimately saves. As Ṣadrā writes in his commentary:

> You know from what has come before, that religious acts, such as prayer, fasting and so on, are only for the purpose of [attaining] states, [by which] I mean, the cleansing and purification of the heart from evils, earthly desires, and attachments. The purpose of states is the [acquisition]

[^5]of the sciences ('ulum), and this is the meaning of [the Imam's] words (a.s.): "the perfection of religion is the seeking of knowledge." ${ }^{22}$ That is, the ultimate objective of religious acts and the obligations of the shari ${ }^{-} a$ is the seeking of knowledge.
Knowledge, then, is of two types: the knowledge of unveiling ('ilm mukāshafa), that is: knowledge of the Essence of God and of His Attributes and Actions; and knowledge of daily actions, that is: knowledge that pertains to the manner in which one should accomplish the acts of obedience and refrain from disobedient and evil actions. The objective of the first type is knowledge for its own sake, and the objective of the second is [so that one may] act in accordance with it. But the objective of action is also knowledge. Knowledge is the first and the last, the origin and the end.
Thus one kind of knowledge is a means and the other is an end; [the latter] being the more noble and lofty. Action is only a means, since it belongs to this world, and this world is only a means to the next, and likewise all that belongs to it. There is no benefit in obedience that is not a means to knowledge, and likewise, [there is no benefit] in knowledge that pertains to [obedience], if it is not a means to action which leads to the state, which leads to pure knowledge (iilm) and sincere knowledge (ma'rifa) of the Face of God. ${ }^{23}$
While some knowledge can be a means to other knowledge, knowledge is the true end in itself. Even knowledge whose immediate benefit is a proper understanding of religious practice and obedience to divine law is ultimately a means of acquiring more knowledge, since religious practice has no meaningful purpose other than to grant increased spiritual knowledge. If "the objective of action is knowledge," the objective of knowledge is not merely proper action. Rather knowledge must be sought for its own sake. ${ }^{24}$

[^6]
## The Analogous Nature of Being ( $w u j \bar{u} d$ ) and Knowledge

When examining Șadrä's views on knowledge, it should be noted that while knowledge is, ultimately, the only means by which a person may advance along the spiritual and ontological ladder, and thus is part and parcel of Ṣadräs ontological theory, knowledge and being (wujūd) are also construed, independently, in analogous ways. Șadräs theory of tashkikk al-wujūd (ambiguity or gradation of being) posits Being ( $w u j \bar{u} \bar{d}$ ) as a single, unified reality that underlies and is the source of all existent things, not as something divided and apportioned among them. Rather existent things are differentiated by their varying degrees of participation in wujūd as such, resulting in differing levels of "intensity" of being ( $w u j \bar{u} d$ ). An individual's "intensity" of being can increase, raising that individual to higher, nobler and more intellectual levels of existence, without the occurrence of ontological disjuncture-every lower level of being is subsumed within the higher, as all being is essentially one, ${ }^{25}$ with God (the "Necessary Being," wājib al-wujūd) alone possessing wujūd as such. ${ }^{26}$ Mulla Ṣadrā understands knowledge in precisely the same way:

> .. the word "knowledge" (ilm) like the word "being" (wujūd) is one of those ambiguous (mushakkak) words that has a single common meaning, but differs in the degree of perfection or imperfection, intensity or weakness, with which it obtains. . .

Despite its "single common meaning," Ṣadrā explains elsewhere that the word "knowledge" may refer to three different, but related things: 1) "a connection between the knower and that which is known" (idāafa bayna al-älim wa-l-mačùm), which is similar to the principle of the union of the intellecting subject and the object of his intellection (ittihād al-āqil wa-l-máqūl), a fundamental theme in all of Sadräs writing; 2) "the image that obtains in the soul" of a concrete reality that it knows, be it knowledge of a universal reality or a particular one; and 3) the faculty rooted in the human soul (al-malaka al-rāsikha) through which things come to be known

[^7]and truths are manifested. ${ }^{28}$ For Ṣadrā, knowledge exists in itself and for its own sake, while it also denotes that faculty by which all things come to be known and a mode of relation between knower and known. Analogously, "being" (wujūd) exists in and of itself, and is also that by which all other existent things have their being, just as light exists and can be seen in itself, but is also that by which all other things are seen. ${ }^{29}$

If knowledge is analogous to being in its gradated existence, it is also, from another perspective, a reality possessing being or $w u j \bar{u} d$-and indeed, possessing being in the highest degree. This is because, for Șadrā, the highest echelons of being are occupied by those existents that are immaterial in nature. Knowledge-both as a faculty and as the final end of this faculty-represents purely immaterial reality: "Knowledge, for the intellect, is a conveyor of the presence of immaterial form to the exclusion of materials and bodies, and there is no doubt that the noblest of possible existents and the highest and the most radiant of them is that existent that is not attached to bodily things. ${ }^{130}$ Being immaterial in its own nature, the acquisition and possession of knowledge advances an individual toward increasingly intellectual and immaterial modes of his own existence. For Ṣadrā, knowledge plays the most important role in the final entelechy of every human being, given that it represents the faculty and the means by which an individual proceeds from one ontological level to the next. ${ }^{31}$ Knowledge nourishes the intellectual faculty, whose increasing maturation and intensification in turn yields the possibility of acquiring higher levels of spiritual-indeed salvific-knowledge. Both pure knowledge itself and the faculty for acquiring that knowledge, the intellect ( ${ }^{(a q l}$ ), are immaterial realities. The more one strengthens the faculty of intellect, the more one grasps the true knowledge of things-that is, in their immaterial reality-for the like can only know the like.

[^8]The more one knows the reality of things, and is able to extract their immaterial reality from their bodily and imaginal manifestations, the more one extracts one's own spiritual reality from its bodily form, thereby making "epistemology an exercise in ontology."32 Ṣadrā writes:
. . . the intellect ('aql) is a form (s $\bar{u} \bar{r} a)$ which is separate from matter, change, deficiency, nothingness, and evil. [It is] the closest of all created things to Him, the AllHigh, and the noblest of all existentiated things in His sight. Man, in his first mode of being, is potential in intellect ('aql bi-l-quwwa) and actual in corporeality (jismānī bi-l-fil) and it is part of his vocation to move from potentiality to actuality and from darkness to light, and thus to become actual intellect after having been potential intellect and actual soul. And it is only through knowledge that one becomes an illuminated substance (jawhar n $\bar{u} r a \bar{a} n \bar{i})$, that is to say, through that faculty which is established and obtained in the human soul subsequent to repeated intellectual perceptions and insights and through prolonged, intelligent thought and contemplation. .
And this intellectual faculty is the source of all happiness and goodness and the repulsion of all misery and evil, and it is the goal of all effort and movement and the end of all right action and obedience. And what virtue or good quality is better and nobler than that through which the human animal is transformed into an angel drawn nigh, and the dark substance into an intellectual light, and blindness into vision and the one who was in error into one who is rightly guided and rightly guiding, and the lowest into the highest and the one who had been imprisoned in the lowest depths ( $s i j j i \mathrm{i} n$ ) into one who soars to the the most exalted heights ('illiyin). ${ }^{33}$

[^9]Thus knowledge is the great elixir, since through it the black and stagnant heart becomes valuable currency in the market of the hereafter and hard and rigid iron becomes a white pearl, indeed a luminous star ${ }^{34}$ which gives light to the inhabitants of heaven and earth. And it is the antidote through which one discerns truth from falsehood and through which one is able to distinguish wickedness from goodness, and it is the light which brings the dead back to life and which advances before and to the right of the believers ${ }^{35}$ on the Day on which good and evil deeds are recompensed, and it is the capability through which one is able to ascend to the realm of the Throne. ${ }^{36}$

Knowledge is the sole means through which human beings can fulfill their ultimate, and indeed, only vocation. Therefore, the continuous acquisition of knowledge is incumbent upon all people, regardless of the level of knowledge they may have already attained. ${ }^{37}$

If the concepts of being and knowledge are parallel in their unified and gradated natures, and linked in their teleological orientation toward immateriality, Șadrā also posits the unfolding of knowledge from one level to the next in a way that parallels his conception of ontological movement, which he refers to as "substantial motion" (al-haraka al-jawhariyya). According to Ṣadrā, human ontological development occurs initially through a divine overflowing or effusion (ifäda) of being until it reaches the level of the human form. Once having reached this form, a human being becomes responsible for using his own faculty of intellect to move upward toward greater degrees of ontological perfection. This view approximates the Avicennan emanationist scheme in a general way, but as Ibrahim Kalin has recently argued, Ṣadräs formulation places much less emphasis than Ibn Sīnā does on the role of the "active intellect" (al-‘aql al-fa'āl), and union therewith, as a means of intellectual advancement and realization, seeing the process as one that is primarily driven by the individual's own effort, and his

[^10]own internal, if potential, intellectual faculties. ${ }^{38}$ For example, in a commentary on a hadìth attributed to 'Alī b. Abī Ṭạlib which states that seeking knowledge is more incumbent on men than the seeking of wealth, Șadrā contrasts wealth, which is divided and apportioned by divine decree, with knowledge, which is acquired only through an individual's concerted effort to acquire it. ${ }^{39}$

While Sadrā may not assign a central role to the active intellect in a human being's movement from one level of existence to another, he does acknowledge the role that human "knowers," or teachers, play in assisting the downward flow of knowledge from the divine principle of all knowledge to its human seekers. ${ }^{40}$ These advanced knowers absorb divine knowledge into their own being, such that they are transformed into the very "coffers of God," that is, the storehouses of His knowledge in the earthly realm:
. . . verily knowledge is stored in the coffers of God, hidden from both lofty and base minds, and [these coffers] are the people of knowledge. Mankind, in his primordial state, is empty of [this knowledge] by virtue of his being far removed from [any] relationship to the lofty world of the malak $\bar{u} t$, and it is only possible for him to become one of the people of knowledge and to accumulate [it] if he seeks [it] and exercises contemplation and effort and devotes himself to the purification of the heart and its refinement until he comes to resemble the mines of knowledge and the coffers of true knowledge ( $m a^{\text {crifa }}$ ), like a piece of hot iron resembles fire through its proximity to it, and thus becomes like it in its properties of illumination and burning. Likewise, individual men, if they contemplate the malak $\bar{u} t$ and seek knowledge with perseverance in acquiring it, come to resemble an intellectual coffer and become like it. ${ }^{41}$
Here S adräs transformative view of knowledge is poetically conveyed as he compares the individual seeking knowledge to a piece of iron moving ever closer to the fire. When close enough to the fire, the iron
becomes red hot, and so acquires not only light and heat, but also properties of illumination and burning that originally belong to the fire itself. While remaining iron, it has nonetheless been transformed so that it possesses in a virtual but efficacious way the ontological qualities of fire, and is capable of actively transmitting those qualities to something other than itself. Having sought out the coffers of divine knowledge, the seekers have become coffers themselves. The knowing human soul, enlightened by divine knowledge, comes to possess perfection and luminosity in such fullness that it overflows and becomes, not only a passive recipient of knowledge and "light," but also an active illuminator of others. ${ }^{42}$

Thus the transformation of the learner into a teacher is not achieved by the mere quantitative accumulation of knowledge, but via a process of substantial transformation that makes him resemble the very divine source of knowledge he had been seeking. The teacher exists on a higher ontological level ${ }^{43}$-a level of greater intensity of being ( $w u j \bar{u} d$ )-able not merely to disseminate his acquired knowledge, but to assist others in their own ontological transformation. The ontologically transformative process of teaching and learning is discussed throughout his commentary on the Kitāb fadl al-ilm, and in one passage, Ṣadrā makes this point through an interesting reference to the Qurānic license to use hunting dogs. Although dogs are generally considered unclean in Islamic tradition, the Qurān allows people to consume the meat of animals caught by trained hunting dogs. The relevant verse reads, in part, Say, "Lawful unto you are all good things." And as for the hunting dogs you have taught, teaching them from that which God has taught you, eat of that which they catch for you (5:4). Șadrā does not quote the verse, but is clearly alluding to it when he says, "Indeed the prey of a 'taught' (mu'allam) dog is pure, purified by the blessing of knowledge, even though he was originally impure." ${ }^{44}$ The implication is that because the dog has been "taught" some of the knowledge that God had "taught" its master, the dog's original ontological state of impurity (najas) has been transformed.

[^11]Given the importance of human teachers in the acquisition of knowledge, and thus in human ontological transformation, Ṣadrā stresses the importance of seeking knowledge from qualified teachers and through interaction with learned men:

Verily, many religious as well as earthly aims cannot be obtained except by seeking the assistance of another and the greatest of all of these is the acquisition of knowledge and understanding in religion, for this is the greatest and most important of all acts of worship and obedience and this is impossible except through interacting (mukhälata) and conversing with teachers and learned men...
Thus the one who is in need of learning, inasmuch as it is a religious duty upon him, which he cannot fail to accomplish, for such a person, seclusion is forbidden. And he would be in disobedience to God were he to seclude himself in his home, unless it was the case that he was not capable of the discussion and examination of the sciences ('ulu$m$ ), and he would prefer to occupy himself with worship and content himself with following what he has heard, and with what he has believed from the outset. It is thus not unreasonable that seclusion in the case of such a man should be preferable. . . though in the worship of an ignorant man there is little good.
As for one who is capable of acquiring distinction in the sciences of religion and the principles of certitude, in his case, secluding himself before he acquires learning and understanding is clear profligacy. For this reason, someone said: "Acquire understanding, and then practice seclusion." ${ }^{45}$
Although Ṣadrā himself retired from public life for lengthy periods of time at least twice in his life, he insists that the practice of seclusion is only legitimate for one who is truly incapable of learning and thus of benefitting from learned company, or for one who has already acquired sufficient learning from others. ${ }^{46}$

45 Ibid., 34.
46 Ṣadrā elsewhere describes the true "friends of God" (dūstdārān-i khudāvand, likely a direct Perisan translation of the Arabic, awliy $\bar{a}$ Allāh) as those who prefer solitude to engaging too much in the world and the company of others;

## Knowledge and Eschatology

For Sadrā, salvation is dependent upon the progressive and inexhaustible seeking of knowledge, and upon the sincerity and faithfulness of the seeking. But knowledge is not only the path to a blissful life in the hereafter, it is also the essential content and ontological reality of that life, for "the hereafter is none other than the capacity for knowledge and perception (idrāk)." ${ }^{977}$ The Garden is pure knowledge, for
> verily the perfection of pleasure is in the perception of the Beloved and the perfection of pain is in remoteness from the Beloved. . . the deeper and more intense the perception, and the nobler, more perfect, more permanent and purer that which is perceived, the nobler and more intense will be the pleasure. ${ }^{48}$

Pleasure in the hereafter is not material in nature, nor can it be measured in physical terms; rather pleasure and pain in this context are measured by one's ability to perceive the divine realities of the hereafter. To the extent that one has cultivated the faculty for such perception in this life, one will be joyful in the next; to the extent that one has allowed this faculty to atrophy, one will be tortured by the eternal obscuration of these blessed realities. Most people, according to Sadrā, never reach the level of pure intellect, and remain at the level of the imaginal soul. Even these may be resurrected, however, since they have managed to reach an ontological degree that has some separation from pure matter. ${ }^{49}$ But because their capacity to perceive intellectual realities has not been fully developed, they are unable to fully enjoy the intellectual pleasures of Paradise. ${ }^{50}$

Those who reach the highest levels of spiritual knowledge and being are most removed from their physical nature, and have

[^12]thus virtually attained or approximated "immateriality." They are not only more capable of perceiving intellectual realities, but also more capable of being intellectually perceived themselves since they are more "intelligible." Thus when commenting upon the controversial issue of God's "gazing upon" the righteous in the next life as mentioned in the context of a hadith attributed to Jaffar al-Şādiq, Ṣadrā indicates that God, being perfectly immaterial, can only know, or "gaze upon," immaterial realities, that is, the inner, non-material aspect of things. Thus only those who possess an inner "heart illuminated by knowledge" will enjoy the otherworldly blessing of God's gaze. ${ }^{51}$

All acquisition of knowledge leads to ontological transformation, but it does not always lead to spiritual advancement or salvation. Knowledge must be sought out and acquired from human teachers, but one must use this knowledge in conjunction with various religious and spiritual practices to bring about a positive spiritual transformation. Șadrā often speaks of intellectual advancement in conjunction with the purification of the soul, tazkiyyat or tasfiyyat al-nafs, ${ }^{52}$ while also warning of the danger of seeking mystical insights without the intellectual preparation that sufficient knowledge provides. In his commentary on the Kitäb al-ḩujja[The book of proof] in Kulaynī’s Ușūll al-kāfi, Ṣadrā states that the true path to God is found at the juncture (barzakh) of intellectual contemplation (tafakkur) and spiritual purification (tasfiyya). This, he tells us, was the way of both al-Ghazālī and the Illuminationists (Ishrāqiyyīn). ${ }^{53}$ Thus there are those who acquire knowledge in this life, but perish in the next for lack of spiritual practice and sincerity. In fact, Ṣadrā asserts that their punishment will be even more intense than that of ordinary sinners, because of their heightened faculties of perception:
... for the changes brought about by the practice of the speculative sciences and educational exercises move

51 Ibid., 25.
52 See, for example, 47, where he states that God has favored mankind with two potential capabilities-one for knowledge and the other for patience and suppressing passions and vain desires; and when both are brought to fruition, they yield spiritual advancement. Șadrā frequently connects the acquisition of knowledge with the purification of the soul; see, e.g., Sharh, 17, 20, 46, 59, 83.
souls intensely, and bring whatever characteristics or actions were hidden in their essences from potentiality to actuality, regardless of whether these are good or evil in nature. And the soul, when it strengthens and intensifies and moves from potentiality to actuality, its experience of pain and loss. . . is stronger, and its experience of torture derived from its perception of torturous things and its attaining to hateful things is more intense, in contrast to more deficient souls who remain in potentiality regarding both evil and good [characteristics], such as the mentally deficient (bulh), children and others who are weak of soul, and the rest of the common people who are not capable of saving themselves (lā yastaticīuna hìla) and are not guided to any way (lā yahtadūna sabī). ${ }^{54}$ For these, because of the limitedness of their substances and the deficiency of their minds, when they are punished, their punishment is not intense, but likewise, when they are rewarded, their reward is not great. ${ }^{55}$
Here, as elsewhere, Ṣadrā indicates that acquiring knowledge hardly lets one off the hook, so to speak, in terms of the next world. In fact, he asserts that "the danger of knowledge is greater than the danger of ignorance, and God's argument against the people of knowledge is more certain, and He will tolerate from the ignorant that which He would not tolerate a tenth thereof from the knower." ${ }^{36}$ The corruption of the best is the worst.

[^13]
## The Hierarchy of True Knowers

It is clear that knowledge forms the basis of Șadrảs conception of ontological and spiritual hierarchy in this world and the next. However, this hierarchy is not based on the pure accumulation or quantity of knowledge, but rather on the quality of that knowledge, the purity and perfection of its source, and the reality and profundity of its transformative effect on the soul. One must begin the ontological journey by seeking knowledge from human teachers, as Sadrā makes clear, but which knowledge and which teachers? Are there certain religious sciences that should be preferred to others as a means of acquiring, or preparing oneself to receive, higher forms of knowledge, and who holds the keys to these sciences? These questions lead us to examine Șadrä's views on the nature of religious learning and the religious sciences of his time, which take up considerable space in his commentary on the Kitāb fadl al-ilm.

## Sadrā on the Religious Scholarship of His Time

Sadrä lived within the intellectually vibrant and contentious social context of the Safavid empire at its political peak. Both Sufi and Shici approaches to Islam flourished concurrently, and often competed with each other for political and social influence. Within Safavid Shī ism and Sufism, the intellectual approaches of the scholarly elite co-existed, sometimes uneasily, with popular and purely devotional manifestations. Șadrā stood, no doubt, with the scholarly elite, but the Shīil scholars were themselves divided into two approaches to religious knowledge: the Akhbārīs, who viewed the Qurān and the traditions of the Prophet and the Imāms as the most reliable sources of religious knowledge and religious law, and collectively as a sufficient source; and the Ușūlis, who felt that religious law had to be arrived at through an arduous process of ijtihād which included a careful weighing of the Qurān and traditions of the Prophet and the Imāms within a system of jurisprudential and rational principles (uṣūl). While the Akbāri/Ușūlī debate principally concerned Islamic law, it came to have implications for other fields as well. For example, since the Akhbārīs relied primarily upon "transmitted" (naqlī), rather than "intellectual" ('aqlī) sources of religious knowledge, they tended not to look favorably on the more ${ }^{\text {a }}$ qqlì sciences of philosophy and
certain forms of mysticism. ${ }^{57}$ Lying at the heart of the Akhbārī/Ușūlī debate was the fundamental issue of what should be considered the true source of religious knowledge and, by extension, who could claim religious authority on the basis of such knowledge. Ṣadrā has much to say about the provenance of true religious knowledge in his commentary, and is highly critical of those who claim status and authority on the basis of what he considers to be the mere pretense of scholarly attainment. So where do we locate Ṣadrā with regard to these two approaches to religious knowledge?

The very fact, noted above, that Ṣadrā devoted precious time during what is believed to be the last years of his life to this commentary on the transmitted traditions of the Imāms would suggest some sympathy for the Akhbārī view. This was the view ascendant in his own time, which held that such traditions represented an essential and reliable source of religious knowledge. Moreover, Sadrā devotes extensive space in this work to discussing the isnäds attached to the traditions he comments upon, providing sometimes voluminous notes on the transmitters as found in the rijäl literature. He thus gives the appearance of taking the transmitted (naqlī) science of hadith quite seriously, and he is careful to attend to the methodological concerns of this science before launching into his metaphysical commentary on the traditions.

At the same time, throughout the commentary, Șadrā is critical of those who limit themselves purely to the acquisition of the transmitted (naqlī) sciences. He derides and belittles those who memorize the words of dead men, ${ }^{58}$ and who collect reports, traditions, and scholarly opinions like trinkets, rather than concerning themselves with the divine sciences and the transcendent knowledge they need to transform themselves from lower ontological and epistemological states to higher ones. For example, he describes those who falsely claim knowledge, while being spiritually "ignorant":
[This is] the one who is ignorant of heart, deceived and deluded, claiming to possess knowledge because he has memorized opinions (aqwāl), and undertaken journeys, and because he is seated in the company of shaykhs

[^14]and learned men (rijall), when his true state is that he is ignorant and possesses no knowledge, and his heart is blind, without insight (baṣira), self-satisfied with what he possesses of the outward aspects of opinions, and the forms of ahädith, and theological disputations, and philosophical sophistries, or supposedly Sufi fantasies and distortions, or poetic orations through which he attracts common souls and the rest of the "worldly scholars" ('ulamā' al-duny $\bar{a}$ ) who are fooled by him, and [who is] drawn to money and high position and prestige and fame, and he is one whom the life of the world has deceived away from the hereafter. ${ }^{59}$
. . . Know that most of those in delusion and conceit are a group who are limited to the knowledge of fatwās and rules, and the memorization of issues of haläl and harām, and who claim that this is knowledge of religion and knowledge of the Book of God and knowledge of the sunna of the Lord of the Messengers [Muhammad], and who abandon knowledge of the path to the hereafter, and struggling against the soul, and purifying one's inner state of blameworthy qualities, and forbidding the soul from passions, and purifying the heart through ascetic practice. . . and who reject entirely the path of gnosis and religious understanding. . . ${ }^{60}$
One might be tempted to read Sadräs contempt for those who marked religious and intellectual status on the basis of an ability to reproduce the words of others as a stance against the Akhbārī school, which advocated reliance on transmitted teachings in the attainment of religious knowledge. Reading this and other passages carefully, however, we see that Șadrảs critique is not directed at any one school of thought, but is rather an attack on intellectual pretension, ${ }^{61}$ on worldly approaches to religious learning, ${ }^{62}$ and on small-mindedness in all its forms.

59 Ibid., 57
60 Ibid., 58-59; for similar criticism, see 50, 126-127.
61 For a lengthy hadith on intellectual pretension with Ṣadräs commentary, see Sharh, 297-301.
62 For criticism of those who use knowledge primarily for worldly gain, see Sharh, $57,135,139,211$. For similar criticism of worldly ' ulamä', see, e.g., Ṣadrā, Seh

In the passages quoted above, Șadrā is equally disparaging of those obsessed with other matters he considers petty and spiritually useless, even when they fall in the domain of the 'aqli sciences, including theological debates, "philosophical sophistries", and "Sufi fantasies." He is critical in general of those who spend their time in what his contemporaries might have considered "intellectual pursuits," but which bring one no closer to an understanding of spiritual reality. For example, he criticizes those who concern themselves with the legal minutiae of various hypothetical legal scenarios, ${ }^{63}$ or who engage in theological debate merely to prove their intellectual dominance. ${ }^{64}$ In fact, at times he compares the perspective of the naqli traditionists favorably with those who substitute their own individual opinion ( $r a^{3} y$ ) on a religious matter for the known teachings of the Prophet and the Imāms. ${ }^{65}$ In his commentary on the numerous ahādïth in Kulaynỉs chapter on the Imāms' strident rejection of the practice of qiyās in determining legal rulings, Șadrā follows the tone of the Imāms' antipathy to this practice. He asserts that qiyās offers "neither sound knowledge nor a strong opinion" (zann qawi), ${ }^{66}$ and in fact leads to a spiritually destructive pride and desire for worldly dominance that one does not find among those who limit themselves to the naqli sciences, which do not provide the same prestige. ${ }^{67}$ Of course, even the Ușūlīs did not engage in qiyās strictly speaking, given the Imāms' widely reported prohibition, but Șadrā’s commentary elsewhere suggests criticism of those who consider ijtihād, more generally, as a reliable method of arriving at truth. ${ }^{68}$
aṣl, ed. M. Khwājavī (Tehran: Intishārāt-i Mullā, 1997), 17-20.
63 Sharh, 214.
64 Ibid., 42.
65 Ibid., 294. See also Sharh, 39, where Șadrā recommends that regarding subjects that cannot be adequately apprehended by one's intellect, one must defer to the teachings of the Prophet.
66 Ibid., 315 .
67 Ibid., 303.
68 See Ibid., 108-109, where Adam's fall is said to result from an "error of ijtihād"; and 320 where true knowledge comes neither from "hearing," that is the naqli sciences, nor from ijtihād. On 97 the knowledge of the mujtahidin and those who practice the speculative sciences is likened to the light of flames and lamps, in contrast to the more "celestial" light of true knowers, because their knowledge does not come directly from the essential source of knowledge, just as the light of flames and lamps does not come directly from the sun.

Taken as a whole, his commentary indicates that he is not critical of any one school of thought or any one branch of the religious sciences; rather his criticism is directed against all who seek knowledge with worldly intention, as well as those who would limit necessary and worthwhile religious knowledge to any one form, be it theology, jurisprudence, Qurānic recitation, hadïth transmission, or the experiential knowledge of Sufism divorced from other forms of religious knowledge. ${ }^{69}$ For Ṣadrā, these sciences are a means to an ultimate end, which is access to the divine knowledge that transcends and is the source of them all. ${ }^{70} \mathrm{He}$ writes,
. . . every universal principle of knowledge has an opening onto the acquisition of this luminous faculty called guidance, since even if it is speculative, it has an essential effect on the illumination of the heart; and if it is practical , it has an effect through the intermediary of acting upon it, with regard to purifying the inward nature and refining the mind and purifying the soul. ${ }^{71}$
The truth may be accessed by many different paths, and all sound knowledge, when it is undertaken with proper intention, leads in the direction of "purifying" and "refining" the soul.

Whatever the political situation of Ṣadrā may have been at various points in his life-and the existing biographical evidence does not seem sufficient to determine his political position with any real certainty ${ }^{72}$-the virulence of his criticism of those who trafficked insincerely or ignorantly in the religious sciences can be sufficiently explained by his transcendent conception of knowledge itself, as the single path by which one might purify and save one's soul, and by which one reaches the very proximity of God. It seems clear that one who held such a view as consistently and, it appears, sincerely, as Ṣadrā did, would have little tolerance for those who peddled knowledge in the intellectual marketplace for worldly

[^15]gain. Furthermore, for Șadrā, knowledge, like being, was a unitive reality, differing only in intensity, and so there could be no tolerance for those who would divide knowledge into separate, isolated branches, or make them compete in importance. Most importantly, for Ṣadrā, the acquisition of knowledge was theorized, and meant to be experienced, as a purely vertical movement toward greater intensity of being and proximity to the divine. Those who considered knowledge to be the mere collecting of variant opinions would seem, by contrast, to be traversing a purely horizontal plane-and the "journey for knowledge," much celebrated in Islamic intellectual
 "horizontal" pursuit.

Perhaps a more important consideration when trying to situate Sadräs epistemology in the context of the intellectual politics of his day, particularly in relation to the Akhbārī/Ușūlī debate, was the extent to which those on both sides of this debate represent an epistemological break from the $\operatorname{Shi}^{-c} 1$ scholars of earlier times. While it might seem natural to view the Akhbārī/Ușūlī divide as a continuation of the traditionalist/rationalist scholarly divide of the fourth/tenth-fifth/eleventh centuries, Robert Gleave explains in two recent studies of the Akhbārī school that while the traditionalist and rationalist $\mathrm{Shï}^{-1}$ scholars of earlier times held that the attainment of certain religious knowledge was possible, albeit via competing scholarly methodologies, both the Akhbārīs and the Ușūlīs of the Safavid era accepted and worked with the assumption of varying degrees of "inevitable doubt" in religious knowledge, particularly as regards formulations of the law. ${ }^{74}$ Ṣadrā, by contrast, was clearly in pursuit of certain knowledge that approximated, or perhaps even reached, the knowledge of the prophets themselves. ${ }^{75}$ Given this, the Akhbārī/Ușūlī debate, with its competing strategies for managing uncertainty in matters of religious (particularly legal) knowledge, would have meant little to Șadrā, at least intellectually.

[^16]74 Robert Gleave, Inevitable Doubt: Two Theories of Shīī $\bar{i}$ Jurisprudence (Leiden: Brill, 2000), 28, 107-110; and Gleave, Scripturalist Islam: The History and Doctrines of the Akhbārī Shī̄̄̄i School (Leiden: Brill, 2007), 5-7, 77, 88.
75 See Sharh, 218, where he compares those whose knowledge is based on certitude with those whose faith is acquired "from the mouths of men" and from "blind imitation" (taqlid), and whose knowledge is therefore shaken by the slightest doubt.

Sadrā has a terminology and a set of metaphors that he repeatedly draws upon to distinguish between the spiritually and ontologically transformative knowledge that he considered to be the only real vocation of human life, and the various intellectual and transmitted sciences that passed for religious knowledge in the society of his time. He refers to those scholars who were masters of the traditional religious sciences as the "conventional knower(s)," using the phrases
 adopted from 'Abd al-Razzāq al-Qāshānī’s, Iștilahāat al-ṣūfiyya." He also makes widespread use of Ghazālī's division of religious knowledge into "knowledge of transactions" (ilm al-mu'ämalāt), which can be known through transmitted reports and through human reasoning, and "knowledge of unveiling" (ilm mukāshafa), ${ }^{78}$ which can only be attained through divine bestowal, usually after a long period of spiritual and intellectual preparation. Like Ghazālī, Sadrā maintains that only a tiny minority of people attain to the "knowledge of unveiling," and that such people are "rarer than red sulfur," ${ }^{39}$ although he criticizes Ghazālī for limiting the pursuit of this knowledge to those who are spiritually unsatisfied by the cilm al-mu'āmalāt..$^{80}$ In keeping with Ṣadrā’s continuous metaphorical association of knowledge (and being) with light, he also explains the

[^17]77 Ibid., 67. See 'Abd al-Razzāq Qāshānī, Laṭā̀ì al-i'lām fí ishārāt ahl al-ilhām: $m u$ 'jam al-mustalahāt wa-l-ishārät al-ṣūfiyya, 2 vols., ed. Sa 'id 'Abd al-Fattāḥ (Cairo: Dār al-Kutub al-Miṣriyya, 1995), 1:489, where rusūm is defined as all that pertains to the created world and all that is other than God.
78 Sharh, 5-6, 36-37. Şadrā opens his treatise, Iksir al-'ärifin with a similar distinction between ordinary religious knowledge and the "knowledge of unveiling"; see Șadrā, The Elixir of the Gnostics, trans. W. Chittick (Provo, UT: Brigham Young University Press, 2003), 4. Abū Ḥāmid al-Ghazālī presents this distinction in the introduction to his Ihyā̄${ }^{\prime}$ culum al-dīn, 5 vols. (Beirut: Dār al-Kutub al-Ilmiyya, 2005), $1: 12$, but says that the "knowledge of unveiling" is not something to be written in books, but only something to be attained by the true seekers, for even the prophets did not speak of this knowledge except in symbolic terms.
79 Sharh, 36-37. The phrase "rarer than red sulfur" seems to have been a common metaphor for rarity, employed in at least one Shici hadith to describe the rarity of the Imāms' true followers (Kulaynī, Kāfi,2:241-242, h. 1; Daylamī, A'lām al-dīn [Qum: Mu'assasat $\bar{A} l$ al-Bayt li-Ihyā̄ al-Turāth, 1408/1988], 123). For other references to the "knowledge of unveiling," see 16, and 20-21 (where he quotes Ghazäli's own discussion of these terms).
80 Sharh, 8-9.
differences between various kinds of knowers through an analogy to different intensities and sources of light. The knowledge of the prophets and the saints (awliy $\vec{a}$ ) is like the light of the sun, which illuminates by its own divinely-bestowed essence and nature, and is dependent upon no external source for its light; the light of the advanced and serious "knowers" who take their knowledge from the prophets and the saints is like the light of the moon and the fixed planets, which give off a less intense light that is nonetheless a reflection of the light of the sun, and on which they are dependent; the sincere worshippers, who do not possess or seek advanced knowledge, are like the stars, which give off even less light, and whose minimal light is effaced by the presence of the full moon. ${ }^{81}$ According to Sadrā, it was the ancient Persian philosophers who first realized this analogy, but it was later expounded by his Ishrāqī predecessor, Suhrawardī, whom he quotes in this context. ${ }^{82}$

If Sadrā borrows much of the terminology for his hierarchy of knowledge from his predecessors, his discussion of this hierarchy as it is found in the Sharh uṣūl al-kāfi also makes use, perhaps inevitably, of $\operatorname{Shi}^{-1} \mathrm{i}$ terminology and conceptual frameworks that would be deeply resonant to a learned $\operatorname{Shin}^{-c} 1$ audience; but he broadens and nuances those terms and frameworks in ways that simultaneously reinforce and undermine key Shīī $^{-1}$ notions of spiritual hierarchy. I will review some of these hierarchical conceptions of knowledge as found in Twelver Shīi modification of these ideas in his commentary.
Shīī Views of Ontological/Epistemological Hierarchy: The Fixed Status of the Imams
At the heart of Shīī notions regarding the spiritual authority of the Imāms is the belief that they possess extraordinary-even miracu-lous-knowledge. The term "a $\bar{a} l i m "$ is used in Shī $\bar{i}$ hadīth literature to refer to the Imām, ${ }^{83}$ and the Imāms are collectively identified with select groups of "knowers" in the Qur'ān. When the Qur"ān asks, "Are those who know and those who do not know equal?," ${ }^{84}$ a

[^18]Shīī hadīth attributed to Muhammad al-Bāqir reads this as a reference to the spiritual distinction of the Imāms. ${ }^{85}$ When the Qurā̄ declares that none knows the inner meaning of its verses except "those firmly-rooted in knowledge" (al-rāsikhuna fil-ilm), ${ }^{86}$ this is likewise understood as a reference to the Imāms. ${ }^{87}$ The Imāms were considered to be the referents of other Qurānic terms of nobility: they were, of course, the "People of the House" (ahl al-bayt), ${ }^{88}$ and the possessors of authority ( $\bar{u} l \bar{u} l-a m r)^{89}$ who had to be obeyed. ${ }^{90}$ They were also the awliy $\bar{a}$ (sing., wal $\bar{i}$ ), the true possessors of the spiritual station of walāya. This is based, in part, on an interpretation of Qur'ān 5:55 that identifies the $a w l i y \bar{a}$ of the believers as being God, the Prophet, and those who believe, who perform the prayer, and give the zakäh, while bowing down. Both Shī'i and Sunnī sources widely consider this verse to refer specifically to 'Alī b. Abī Taalib; thus 'Alī is the wali of the believers, a title that can then be extended to the Imāms among his descendants. The identification of 'Alī and the other Imāms as walī/awliya $\vec{a}$ is also based on the famous Ghadīr Khumm ḥadith, wherein the Prophet said, "For whomever I am their master (mawlā, var. walī), 'Alī is also their master; O God, befriend (wāl̄̄) the friend of 'Alī (man wälāhu) and be the enemy of his enemy." ${ }^{1}$

The Imāms were the true "heirs of the Prophet" and are believed to have exclusively inherited esoteric knowledge of the Quran and other spiritual teachings from the Prophet Muhammad through 'Alī. According to Shī'i hadìth literature, this exclusively "transmitted" knowledge was further enhanced by miraculous and divinely bestowed intellectual capabilities (for example, a knowledge of multiple sacred languages), ${ }^{92}$ by secret esoteric writings and books

in their possession, ${ }^{93}$ and by a form of indirect divine inspiration. ${ }^{94}$ No single technical term was definitively ascribed to the Imams' special mode of divine inspiration; ${ }^{95}$ rather, the Imāms were said to be those who were "spoken to" (muhaddath). ${ }^{96}$ The followers of the Imāms were similarly considered to enjoy access to a more elite spiritual and intellectual station by virtue of their attachment to the Imāms. A tradition attributed to Muḥammad al-Bāqir, for example, identifies his Shī $\overline{1}$ followers with the Qurānic $\bar{u} l \bar{u} l$-albāb, or "people of intellect;"97 and a widely reported tradition states that the teachings of the Imāms are difficult, and that only "an angel drawn nigh, or a sent prophet, or the heart of a believer that has been tested for faith" (understood to mean the learned among the Imāms' followers) can truly grasp them, ${ }^{98}$ thus placing learned Shicis in the company of angels and prophets as those who alone can bear the weight of the Imāms' teachings.

## A Ṣadrian View of the Hierarchy of Knowers: The Prophets and the Awliy $\vec{a}$

In his commentary, Sadrā frequently mentions "the prophets and the awliy $\bar{a}$ ", as those who together occupy the highest level of his ontological and spiritual hierarchy. He considers both to be analogous to the sun, radiating knowledge from their very essence, rather than passively transmitting the knowledge of others. However, the role of walāya in Ṣadrä’s formulation of ontological hierarchy,
93 Ibid., 1:283-285, 294-298.
94 Ibid., 1:298-309.
95 In a few places, it is referred to by the terms ilhäm, or more rarely, wahy, which is usually used for prophetic revelation, see Amir-Moezzi, Divine Guide in Early Shiisism, 72.
96 Kulaynī, al-Kāfi, 1:230-231; for a fuller discussion of this term in Imāmī Shī̄̄ thought, see Etan Kohlberg, "The Term Muhaddath in Twelver Shi'ism" in Belief and Law in Imami Shi'ism (Aldershot: Variorum, 1991), 5:39-47.
97 This is a Qurānic phrase used often to refer to those who piously "remember" [God] and who reflect on the signs of God around them. See, e.g., Qur'ān $2: 269,3: 7,13: 19,39: 9$. For Shií traditions that identify this phrase as a reference to the Shīī̀s, see Kulaynī, al-Käfi, 1:269; al-Baraqī, Kitāb al-mahāsin, 127-128.
98 Kulaynī, al-Käfi, 1:466-467; Muḥammad Bāqir Majlisī, Bihhār al-anwār, 110 vols. (Tehran: Dār al-Kutub al-Islāmiyya, 1957-), 2:183-197, 208-213; Jáfar b. Muhammad al-Haḍramī, Aṣl Jáfar al-Hadramī in al-Ușūl al-sittat'ashar (Tehran: Markaz-i Nashr-i Kitāb, 1951-2), 65 . Ṣadrā adduces this hadith in the Sharh (49) to indicate the essentiality of knowledge and its acquisition to the Shíi community.
coupled with his obvious reverence for the Imāms, has led some to overstate, perhaps, the importance of strictly Shi'i conceptions of walāya and imāma in his work. ${ }^{99}$ For it is clear, even in Șadrä's commentary on the sayings of the Imāms themselves, that the category of the awliy $\vec{a}$ includes not only the Imāms, or even the Imāms and their most learned followers, but rather extends to all who have been ontologically transformed through the acquisition of knowledge and the practices of spiritual purification. Ṣadrā describes this expanded category of saintly knowers using terms often associated with the Imāms in mainstream Twelver Shīí tradition: they are those "firmly-rooted in knowledge" (rāsikhūnafi l-ilm), ${ }^{100}$ they are the "People of the House," ${ }^{101}$ and they are the "possessors of authority" ( $\bar{u} l \bar{u} l$-amr). ${ }^{102}$ Sadrā bases his more inclusive view of the category of saintly knowers (awliyä) on a correspondingly broader interpretation of "descent" and "inheritance" from the Prophet.

If access to extraordinary sources of knowledge was an inheritance that Shīi tradition claims the Imāms received from the Prophet, for Ṣadrā they were not the only heirs. In Ṣadrā’s view, the Prophet and 'Alī had both genealogical descendants and "spiritual" descendants, such that it was possible to speak about a group of "spiritual heirs" to prophetic knowledge-a group that includes the Imāms, but was not limited to them. Șadrā writes, citing a "recent authority":

One of the contemporary, distinguished [thinkers] has said, with regard to [this issue], in brief: "The family of the Prophet (s.a.w.a.s.) are all those who descend from him, and of these there are two types. The first is the one who descends from him as a formal and bodily consequence, such as his offspring and those of his blood relations who proceed from him, for whom the accepting of charity is forbidden according to the Muhammadan shari ${ }^{-} a$; and the second is the one who descends from him as an immaterial and spiritual consequence, and these are his spiritual children among those

[^19]firmly-rooted in knowledge and the perfected saints and the divine sages who draw from his lamp-niche, whether they precede him in time or are contemporary [or posterior] to him." And there is no doubt that the second relation is surer than the first, and if the two are combined, then it is "light upon light," such as is the case with the well-known Imāms from the pure family (a.s.) And just as formal [material] charity is forbidden to his formal [bodily] offspring, likewise is spiritual charity forbidden to his spiritual children-that is to say, the blind imitation (taqlid) of another in the sciences and in true knowledge. ${ }^{103}$
Here the spiritual descendants of the Prophet are identified as those who "draw from [the Prophetic] lamp-niche," as well as those "firmly-rooted in knowledge"-a phrase that, as noted above, was usually understood as a reference to the Imāms in Imāmī hadìth literature. Thus these spiritual descendants of the Prophet, like the Imāms, have access to extraordinary sources of knowledge that place them in a category hierarchically above the ordinary believer. Sadrä then makes the apt analogy that just as the material (genealogical) descendants of the Prophet are forbidden from accepting material charity, so too are his spiritual descendants forbidden from accepting spiritual charity-that is, the blind acceptance of the doctrinal positions of others-since like the genealogical descendants of the Imāms, they are "fed" from a higher source. ${ }^{104}$

Sadrā does not put all "spiritual descendants" of the Prophet on equal footing. The Imāms who can claim both genealogical and spiritual descent from the Prophet occupy a unique rank-they are "light upon light." ${ }^{105}$ Elsewhere, STadrā tells us that the "trustees" (awșiy $\bar{a}$ ), meaning the Imāms, are "the most exalted of the knowers, the best and the greatest of them [other than the prophets], while the knowers are the lords of the [ordinary] people ( $n \bar{a} s$ ).. ${ }^{106}$ On the

[^20]basis of this comment, Șadräs conception of a spiritual hierarchy based on knowledge would place the prophets at the pinnacle, followed by the trustees ( $a w s$ siya"), then the saintly "knowers" outside the categories of the prophets and the awșiy $\vec{a}$, and finally, the ordinary people. This is similar to what one finds in Shili tradition as well, which recognized a hierarchical relationship between learned Shir $^{-c}{ }^{107}$ and the more purely devotional Shíi population, as well as non-Shīa. The learned Shīīs were the elite (khāsṣa) as compared with the "commoners" ('āmma or simply nās). In places, Ṣadrā seems to embrace the idea that the learned Shía occupy a spiritual and intellectual position above others, ${ }^{108}$ although this is somewhat belied by the greater extent to which he relies on non-Shīi thinkers as influences for his own philosophical thought.

Having explicitly expanded the concepts of "true knowers," "those firmly rooted in knowledge" and even the "People of the House" (ahl al-bayt) beyond identification solely with the Imāms, and having identified them as the awliy $\vec{a}$ and the "spiritual descendants" of the Prophet, Sadrā goes on to make bold statements about the cosmological and spiritual role of this expanded group. In particular, Ṣadrā attributes to the "saints" the same, or similar, access to extraordinary sources of knowledge as enjoyed by the Imāms, and indeed, as we shall see, even the prophets. While S.adrā often groups the prophets and the saints together as those who have access to the highest form of knowledge-knowledge that comes directly from the divine, rather than through human transmission-he usually refers to the divine inspiration received by the saints as ilhām, a less direct form of inspiration than that designated by the terms tanzill or wahy, usually associated with the prophets. In one passage, Sadrā comments on a hadīth attributed to the Prophet through Jaffar al-Şādiq which says, "For every harmful religious innovation (bid'a) that will arise after me, and that threatens to undermine faith, there will be a walī from the People of my House who will be charged with refuting it, speaking through inspiration (ilhām) from God,

[^21]publicly proclaiming and illuminating the truth. . . ${ }^{109}$ For Ṣadrā, this hadith, which employs the terms "people of the house" and "walī" in connection with ilhām, indicates that the awliy $\bar{a}$, along with the prophets and the Imāms, have an important role to play in bringing corrective divine guidance to the human community. In his commentary on this hadith, he presents the officially accepted distinction between the prophets and the awliy $\bar{a}$, indicating that the prophets are aided by wahy and evidentiary miracles ( $m u^{\prime}$ 'jizät), while the $a w l i y \bar{a}$ are aided by ilhām and lesser miracles (karāmāt). Nevertheless, he indicates that both types of divine "aid" are the result of the overflowing of divine light upon the hearts of the prophets and the $a w l i y \vec{a},{ }^{110}$ thus locating the origin of the epistemological and ontological status of both groups in their direct relationship with the divine.

Șadrā argues that true knowledge comes not from books or scholarly transmission, but only from divine inspiration that falls upon a heart spiritually prepared to receive it. ${ }^{111}$ Shī'i tradition, however, maintains that one of the primary sources of the Imāms' knowledge is a unique series of books and written texts in their possession, whereby the special knowledge of the Prophet, or even previous prophets, was conveyed to them. Şadrā does not refute this belief directly, but suggests that such references might be meant as metaphors for inward states of knowledge. ${ }^{112}$ Commenting on a hadith that states that the answers the Imāms give their disciples' come directly from the Messenger of God, Ṣadrā writes:

> Know that the meaning of what [the Imām] said: "I do not give you a response to anything except that it comes from the Messenger of God (s.a.w.a.s.)" is not what the exoterists (zähiriyyūn) among the people understand, namely that it is [the Imām's] vocation to memorize sayings from one generation to the next such that their superiority in relation to the rest of the people is the strength of their memorization of transmitted things, or the great number of things they have memorized.

[^22]Rather, the intended meaning is that their holy souls are filled with the light of knowledge and the strength of gnosis because of following the Messenger (s.a.w.a.s.) in spiritual striving (mujāhida), and spiritual exercises (riyäda), along with their inherent state of spiritual preparation (isticdād aslī) and clarity (safầ) and purity (ttahāra) of mind, such that they become like a polished mirror turned in the direction of the truth through the intermediary of another mirror, or without intermediary. Do you not see that the mirror prepared for reflection and the reflection of the other mirror are turned in the direction of the sun and reflect the radiance of the sun to all? Thus the state of one who follows the Messenger (s.a.w.a.s.) with a true following becomes the beloved of the Real, the All-High, and in His words, the All-High: "If you love God, then follow me and God will love you" (3:31). And whomever God loves, He makes divine lights overflow upon him (afäda ‘alayhi), as He makes them overflow upon His beloved [Muḥammad] (s.a.w.a.s.), although the difference is firmly established between the followed and the follower.
And in general, one should know that the knowledge of the Imāms (a.s.) is not based on ijtihād, or on hearing transmitted reports through the senses. Rather their knowledge is unveiled (kashfiyya), presential (laduniyya), the lights of knowledge and gnosis having overflowed upon their hearts from God, glory be to Him, not through the intermediary of something based on sensible hearing or writing or upon a report, or anything of this sort.
An indication of what we have just explained and its clarification is [found in] the saying of the Commander of the Faithful, ['Alī] (a.s.), "The Messenger of God taught me one thousand doors of knowledge, each door opening upon a thousand doors. . .
And the meaning of the Messenger's teaching (s.a.w.a.s.) was the preparation of ['Ali's] noble soul, receptive to the lights of guidance, over the course of his companionship [with the Messenger] and constantly being by his side,
> through his teaching him and guiding him as to how to travel on the path to God by taming the animal soul and strengthening it for what it has been commanded, and making it subservient to the divine, intellectual spirit; and [through] his teaching him by allusion the means of taming [it] and spiritual exercises ['Alī] (a.s.) was prepared for the extraction of hidden things, and to be informed about the unseen things. ${ }^{113}$

Thus the most important spiritual bequest from the Prophet to 'Alī was not specific religious teachings that could then be transmitted verbatim to other Imāms and their disciples; rather it was knowledge of the spiritual exercises-similar to those practiced by other mystics in Islam - which prepared the heart to receive the overflow of divine knowledge, and to be a clear mirror for the reflection of divine truth. Rather than "horizontal" knowledge that becomes attenuated as it is transmitted from generation to generation, the Prophet gave 'Alī the key to the door of "vertical" knowledge, coming straight from its eternal source. The implicit but provocative aspect of Ṣadrās commentary here is his suggestion that other human souls, perhaps all human souls, have the potential to acquire those same "keys" to vertical knowledge if they, like 'Alī, engage in the spiritual practices necessary to purify their own hearts and souls.

For those who succeed and thus reach the level of the awliyāa and the true "People of the House," Sadrā indicates that their degree of knowledge approximates, not only that of the Imāms, but even that of the prophets themselves. He writes:

> Thus the People of the House (a.s.) are those firmly rooted in knowledge, and they possess the interpretation of the traditions. The people of the outward husk are distanced from true knowledge of the inner meanings of the Qur $\bar{a} \mathrm{a}$, and the interpretation ( $t a^{3} w \bar{l} l$ ) of traditions; since the husk can only know the husk, while the kernel (lubb) is only known to the possessors of understanding ( $\bar{u} l \bar{u} l$-albāb). ${ }^{114}$ They are those whose spirits have

113 Ibid., 319-320.
114 For a similar comparison between the people of the husk and the people of the "kernel" ( $\bar{u} l \bar{u} l$-albāb) as it relates to knowledge of the Qur'ān in particular, see Asfär, 7:39-40.
been conveyed from the world of form and sense to the world of spirit and intellect, for they acquire their knowledge from God through the light of [spiritual] states, while others acquire their knowledge from men, whose method is but the collection of words.

Know that the difference between the People of the House (a.s.)-that is, the perfected saints-and other learned men with regard to the inheritance from the Prophet (s.a.w.a.s.) is that the saint, protected against error ( $m a^{\prime}$ sum min al-khata'), does not acquire that knowledge, which is the inheritance of the prophets and the messengers, until God inherits it from [the prophets] and sends it to [the saint]. And as for other men, learned in written documents, they acquire knowledge transmitted from generation to generation . . . while the relation [to the initial source] becomes increasingly remote. As for the saints (a.s.), they acquire the inheritance of the prophets (s.a.w.a.s.) from God, insofar as it is His inheritance and He gives it freely to them, for they are heirs to the messengers and the transmitters of their traditions, through something like the exalted and preserved authority that does not allow falsehood to enter into it from in front or from behind-a revelation (tanzil) from the Wise, the Praiseworthy. ${ }^{115}$
A number of extraordinary claims are put forth here. Șadrā ascribes to this expanded group of "spiritual descendants," whom he here refers to as the "perfected saints" (awliy $\vec{a}$ ), immunity from error ('isma) and a form of divine inspiration (tanzil) that is usually said to be the preserve of the prophets and the Imāms. These two distinctions are directly related. Ordinary knowers receive knowledge by way of human transmission from one generation to the next. As the transmission becomes more remote from its initial source, it becomes increasingly attenuated and sometimes corrupted. The "perfected saints," however, acquire prophetic knowledge directly from God-who bequeaths it to the prophets, and takes it back upon their deaths, and then transmits it in pure, unadulterated form directly to the $a w l i y \bar{a}$. Sadrā refers to this transmission of prophetic
knowledge through the intermediary of divine inheritance and bequest as a kind of tanzil-a remarkable statement, considering the nearly exclusive association of this term with historical prophecy, rather than with some form of inspiration (ilhām).

While Ṣadrä keeps the categories of prophet and wali nominally distinct, he elsewhere describes the nature of walayya in a manner that brings it very close to the status of prophethood. For example, Sadrā describes the saintly knowers as "following a clear proof from their Lord" ('alä bayyina min rabbihim), ${ }^{116}$ a phrase used repeatedly by the prophets in the Qurān to assert the divine provenance of their missions. ${ }^{177}$ In one passage that occurs in Șadräs commentary on a hadïth found in Kulaynỉs chapter, Kitäb al-ḥuja [The book of divine proof], he equates walāya with the lowest degree of prophethood, which is occupied by a prophet who receives a divine message in his own soul, perhaps through ilhām, but is not required to convey that message beyond himself. Here Ṣadrā adds:
... this is the degree of the awliy $\vec{a}$... except that the title, wali, was not applied to any of the awliy $\vec{a}$ (a.s.) before the sending of our Prophet Muḥammad (s.a.w.a.s.); rather they were called "prophets" (anbiyä"). For there is no difference between prophethood that does not bring with it a scriptural message (risāla) or a divine law ( $t a s h r i ̄$ ${ }^{-}$), and walāya, except in name rather than meaning. Thus before the sending [of Muhammad], every walī was a prophet ( $n a b \bar{i}$ ) in name. ${ }^{118}$
Şadrā is not alone in defining walāya in such a way that it approximates the level of prophethood, at least the level of the non-lawgiving prophets before the time of Muhammad. Ghazälī, for example, suggested that one can attain to the properties of prophethood through the "fruitional experience" that some acquire by following "the way of Sufism." ${ }^{119}$ Rūzbihān Baqlī, in his Unveiling

116 Ibid., 57.
117 See Qurān 6:57, 157; 7:73, 85, 105; 11:28, 63, 88; and also Naṣr b. Muzāhim, Waq̌at Șiffin, ed. 'Abd al-Salām Muḥammad Hārūn (Beirut, 1990), 484, where one of 'Alī's followers describes him in a similar manner.
118 Sharh, 423.
119 Abū Ḥāmid al-Ghazālī, Deliverance from Error, trans. R. J. McCarthy (Louisville, KY: Fons Vitae, 1980), 85; for the fuller discussion, 84-86.
of Secrets (Kashf al-asrār) asserts that God chose him for walāya, ${ }^{120}$ but also recalls that when he was a young boy, he heard a voice that identified him as a prophet. ${ }^{121}$ And Ibn al-'Arabī claimed to have reached a state of sanctity such that he became receptive to direct divine inspiration, reporting in his massive work, The Meccan Openings (Futūhāt al-Makkiyya), that all the words that would follow had been "dictated" to him by God. ${ }^{122}$

In fact, Șadrä's assimilation of the state of walāya with certain kinds of prophethood seems, in places, to have a strong Akbarian flavor. For example, in Ṣadrā’s commentary on a hadīth in Kulayni’s Kitāb al-hujja, he presents a metaphorical image of the Prophet Muhammad as the center point of a necklace, with the pre-Islamic prophets who came before him ranged on one side, and the saints (awliy $\vec{a}$ ) who come after him ranged on the other. Each saint is positioned opposite a pre-Islamic prophet whom he resembles in some way. Șadrā says that 'Alī, the closest of the $a w l i y \bar{a}$ ' to Muhammad, faces Jesus, who is correspondingly the closest of the prophets to him, and notes that 'Alī and Jesus resemble each other insofar as their spiritual stations were exaggerated by certain of their followers. ${ }^{123}$ The conceptual relationship between the $a w l i y \vec{a}$ and the prophets suggested in this passage is highly similar to Ibn al-'Arabi's discussion of saints who take on the spiritual characteristics of various Islamic prophets. ${ }^{124}$ Sadrā is not the first thinker to try to reconcile Twelver Shīí belief with an Akbarian conception of walāya; Haydar al-Āmulī is known for doing the same. But by comparison, al-Ämulī's formulation was more firmly wedded to Twelver Shī̄ imāmology. For example, he accommodates the doctrine of the occultation of the Twelfth Imām in this discussion of sainthood by identifying him as

[^23]the "seal of sainthood" (khātam al-awliyā'), just as Muḥammad was the seal of the prophets. ${ }^{125}$ Ṣadrā does not show similar concern for such doctrinal matters. His conception of walāya and the spiritual position and characteristics of the awliy $\vec{a}$, as he describes them, are more closely aligned with Sufi formulations of the term, and have a lesser, and at times almost nominal, connection to Twelver Shīī imāmology.

Like the Sufi thinkers who influenced his thought, Ṣadrā is aware of the hesitation and even repulsion with which ordinary people and "conventional" religious scholars viewed claims of divine inspiration outside the category of prophethood. Such a response would have to be expected, even from a metaphysical point of viewfor how can the lower grasp the higher, how can the limited know that which is free of those same limits? As he says above, those who receive their knowledge in this extraordinary way are "those whose spirits have been conveyed from the world of form and sense to the world of spirit and intellect." By virtue of the purification of their souls, they have acquired a form of prophetic knowledge through a divine conduit that has transformed their ontological state. Those who remain at a lower level of being-in the realm of sense and form-deny the existence of what transcends them:
... understanding the stages of walāya and prophecy are difficult [for those] at the stage of intellect the majority of people have reached. As it is the nature of common people to deny what they have not grasped, so it is also their nature to deny the state of walāya and its wonders, and the state of prophecy and its unique qualities. In fact, it is their nature to deny the next level of being and the life of the hereafter, which is the life of knowledge and of witnessing the angelic realm, because the ontological levels of walāya and prophecy are also among the manifestations of authority in the hereafter, and whoever denies the reality of the hereafter inevitably denies these two states. He does not recognize the prophet as a prophet, nor the wali as a wali. ${ }^{126}$

[^24]For Ṣadrā, who viewed all of reality as a gradated continuum of being, the existence of the state of waläya between prophethood and ordinary humanity was a logical necessity. Sharp ontological distinctions made no sense within the logic of this system, and so between the exalted stage of prophecy and the pitiful state of ordinary humanity, there had to be grades of closeness to the light of prophecy itself, and the movement upward through these grades of nearness and perfection was ontologically transformative. Not only should ordinary people not deny or begrudge the awliy $\vec{a}$ their ontological station, they should seek to reach it themselves through, in part, a humble obedience to these same perfected saints. ${ }^{127}$

## Conclusion

Sadrä’s commentary on Kulaynīs Uṣūl al-kāfi is naturally assumed to be an exercise in reconciling his philosophy of knowledge and being with the transmitted sayings and doctrinal positions of the Twelver Shici community to which he unambiguously belonged. Yet what we find in this commentary is a faithful presentation of the fluid, gradated, and hierarchal epistemology and ontology he expounds in his systematic, philosophical works. There is little evidence that Ṣadrā tailors his views to accord with the ahādīth on which he comments. Knowledge is intimately connected to being, it is the ultimate purpose of all human activity and the vocation of all human life, it is the path to salvation and the very essence of life in the hereafter. It is the light that leads the soul on its journey through higher ontological levels and degrees of spiritual perfection in this world, and that guides it across the sirāt in the next.

This journey is powered by the soul's own effort, but initially requires the guidance of true teachers and knowers, who not only possess higher levels of knowledge, but who also occupy a higher ontological level, although among them there is a hierarchy as well. There are the worldly knowers whose "light" is like that of a lamp, emanating from earthly, not celestial, sources; they provide limited guidance, but are saved by their knowledge if their teaching and learning are sincere. Then there are the true knowers, whose knowledge is taken directly from the prophets and the saints (awliy $\vec{a}$ ), and as such are like the moon, illumined by the light of the sun and transmitting it to those below them. And finally there are the
prophets and the awliy $\bar{a}$ themselves, radiant by their own essence like the sun, with knowledge bequeathed to them directly by God. These categories are not fixed: Every learner, in the right company, with proper intention and effort, may become a true knower. Every true knower has, in principle, the potential to reach the level of the awliy $\vec{a}$, occupied by the Imāms but not exclusive to them-like the iron rod that moves ever closer to the fire, and eventually becomes like the fire itself. The category of prophethood is exclusive to the prophets, although the status of the awliy $\bar{a}$ approximates it in ways many might find controversial.

The hierarchical nature of Ṣadräs ontology, its close correlation with degrees of knowledge, and its positing of an intermediate spiritual level between the Prophet and the ordinary believer are all consistent with the Shî'i religious perspective. But the lack of fixed ontological categories below the level of the Prophet, and Ṣadrä’s concomitant broadening of the category of the awliy $\bar{a}$ beyond the Imāms-even if he maintains a certain privilege for them within this category-challenged more traditional conceptions of the Imāms' uniqueness. Moreover, Ṣadrā’s inclusive definition of the category of awliy $\bar{a}$ puts the Imāms in the company, not of the exoteric Shîi religious scholars who claimed to be heirs to the knowledge and authority of the Imāms, but of the saints and gnostics who in Șadrā’s description look far more like Sufi mystics than Shīi devotees. The challenge to exoteric Shi'i tradition that this represents is largely smoothed over throughout the commentary by Ṣadräs use of multivalent terms-walī, ‘ālim, 'ārif, even imām-and the continual grounding of his spiritual hierarchy in the terminology of the Qur'ān- $\bar{u} l \bar{u} l$-albāb, rāsikhūna fillilm-terms used by Shīīs and Sufis alike as Qurānic proof texts for their own conceptions of spiritual hierarchy. But his view of the highest form of knowledge (the knowledge of unveiling), and of the penultimate rung on the human ontological ladder (waläya), are recognizably Sufi rather than Shīī in orientation. Given his reported and repeated demonstrations of reverence for the Imāms, Ṣadrās commentary is not likely meant to undermine their position, but rather to demonstrate the way in which the teachings of the Imāms, if read correctly, open onto an esoteric dimension missed by the majority of his scholarly contemporaries.

# Mullā Ṣadrā’s Ontology Revisited 

David B. Burrell

Convening in Tehran in 1999, the Mullā Ṣadrā Institute drew numerous participants who had never before heard of this philosopher. Indeed, I had known little more than the name until I read Henry Corbin's edition of a summary workLes penetrations metaphysiques-and was fascinated to find many affinities with the work of Thomas Aquinas, notably in his exposition of existence. ${ }^{1}$ The gathering itself inspired me to translate the passage on existence from Mullā Șadrảs magnum opus, al-Ḥikma al-mutaćāliya fil-asfär al-'aqilyya al-arba'a [The transcendent wisdom on the four journeys of the intellect]. ${ }^{2}$ The experience of translating encourages me to present Mullā Ṣadrā by extending the standard narrative of Islamic philosophy to make way for both Sunni and Shī ${ }^{-1}$ successors to Ibn Rushd, while making al-Ghazālī-the scapegoat of the standard narrative-into the axial figure in this recasting of the history of Islamic philosophy.

The new narrative will need a plot, which sustained efforts on the part of thinkers in each of the Abrahamic faiths readily supply: the struggle to articulate the relation between the created universe and its singular source. ${ }^{3}$ Moreover, what makes the relation quite ineffable is the unique "distinction" of creator from creation; a distinction that proves axial to each faith-tradition's averring that creating is the free act of one God. ${ }^{4}$ So it is not surprising that it

[^25]is philosophical theology that shapes the now extended narrative, moving us beyond the ways in which al-Fārābī and Ibn Sīnā employed the model of logical deduction to present creating as a timeless and even necessary emanation from the One. For while emanation is a metaphor that can move in diverse directions, as it clearly does in Plotinus, the deductive model inhibited a clear elucidation of "the distinction," since the initial premise of a logical deduction differs from its consequences only by its pre-eminent position. Even Ibn Rushd, who had little patience with al-Ghazälī's critique of "the philosophers" in Islam, had even less hope that Ibn Sīnä's scheme, adapted from al-Fārābī, could elucidate the act of creating. Yet his own attempt to clarify that, while subtly intimating Islamic tradition and Qur'ānic precedent in its focus on "practical reason," set the stage for further development more than it resolved the outstanding issues. This development would follow Islamic thinkers from Andalusia back to the heartland of the Levant, in the persons of Suhrawardī (1154-1191), Ibn 'Arabī (d. 1240), and Ṣadrā al-Dīn al-Shīrāzī [Mullā Ṣadrā] (1572-1640). All of these thinkers are explicitly beholden to Ibn Sinnā, yet each endeavors to adapt his philosophical mode of inquiry to articulate the relation between creation and the creator. So their agenda, singly and cumulatively, brings explicitly theological issues to the fore; however each of them is still taken up with philosophical concerns ancillary to that central task: Suhrawardī with epistemology, Ibn 'Arabī in searching for ways to articulate so unique a relation, and Mullā Ṣadrā with bringing a bevy of philosophical issues under the ambit of existing as resulting from the One who is existing.

As the last of this trio, Mullā Ṣadrā is hardly intelligible without his two predecessors in the Levant, so these efforts to identify his specific position and contribution demand that we present their achievements in the process of elucidating his. Yet economy demands that Suhrawardī and Ibn 'Arabī be included by way of background briefing, as we present specific issues in Mullā Ṣadrās thought. Superb explications of Suhrawardi are readily accessible in the work of John

Walbridge ${ }^{5}$ and Hossein Ziai, ${ }^{6}$ together with their joint translation of Suhrawardī's central Philosophy of Illumination,' and of Ibn 'Arabī in William Chittick's two works: Sufi Path of Knowledge: Ibn al-Arabi's Metaphysics of Imagination and Self-Disclosure of God: Principles of Ibn al-Arabi's Cosmology. ${ }^{8}$

I offer excerpts from our translation from Mullā Ṣadrā’s Asfār to convey the flavor of his mode of inquiry, utilizing as well the work of Christian Jambet, ${ }^{9}$ illuminating articles by Hamid Dabashi, ${ }^{10}$ Hossein Ziai, ${ }^{11}$ and Seyyed Hossein Nasr. ${ }^{12}$ A lasting gratitude is due to Henry Corbin, whose pioneering work opened this field to so many, most of whom will also endeavor to reflect the particular orientation he celebrated in Ishrāqī ["oriental"] thought. It should be clear by now that this later extension of Islamic philosophy enjoys far less publicity than the earlier Peripatetic phase; yet, unless it is brought into focus, to show how it both develops and alters earlier themes, any presentation of Islamic philosophy will unwittingly falsify the picture. It has surely been the case, however, that short of a distinctly "postmodern" sensibility, philosophers have found their inquiries bordering on the esoteric, and are thus hardly fit for sober

philosophical elucidation. Indeed, Corbin's presentation had the effect of intensifying those fears, so the guides whom I have indicated are intent on offering an alternative view of their work, as am I. Yet the fact remains that any attempt to elucidate the ineffable relation between creator and creatures, which is the central task of these thinkers, challenges categories exclusively tailored to created things.

## The Primacy of Existing over Essence

Mullā Ṣadrā is best known for taking issue with Suhrawardī, and insisting that existing take precedence over essence in explicating the metaphysical composition of creatures, as well as their mode of emanating from the Creator. But the very distinction between existing and essence, as well as the role it played in offering a way of identifying creatures as created, anchors our narrative in Ibn Sinā, and shows the inherent continuity in a philosophical saga whose second phase often appears to be very different from the first. Yet both, as we shall see, were shaped by Ibn Sīnā. The overall context is Mediterranean, and lest this sound banal, we need only remind ourselves that the bulk of western reflection on medieval philosophy was crafted in western and northern Europe. So the standard accounts we have received spoke little of the philosophy (or the philosophers) in the Muslim or Jewish traditions, yet we have found that they were, where possible, in contact with one another, and beholden to one another. ${ }^{13}$ Yet all three traditions had to contend with Plotinus' radical adaptation of Aristotle to focus on the origination of the universe, retrospectively seen as paradigmatically "neo-Platonist." For it had come to occupy the philosophical center stage, so that later thinkers who sought to incorporate a revealed creator into the Aristotelian worldview would spontaneously begin with a Plotinian scheme, with which some found it necessary to contest. This is especially clear in al-Fārābī, who adopts the emanation pattern quite directly to signal the relation between "the First" and all that emanates from It; that is, everything else. ${ }^{14}$ Ibn Sinnā modifies the scheme inherited from al-Fārābī (and so from Plotinus), and introduces his initial version of the essence/existing distinction to clarify how al-Fārābī's "First," now Ibn Sīnās "necessary being,"

[^26]relates to everything else: being possible in itself, when it exists, becomes 'necessary' by the existence it derives from the One, who is distinguished from all else as necessary being. It will prove crucial to the later development of the essence/existing distinction that this One, ancestrally related to Plotinus' One (explicitly "beyond being") is now denominated "necessary being." The Jewish interlocutor in this discussion, Moses Maimonides, was well-instructed by Ibn Sīnā, yet took issue with his apparently seamless adaptation of the Farabian/Plotinian scheme to display the free creation of the universe by the one God, now revealed in the Torah. In so reacting, he may well have been emboldened by al-Ghazâli's trenchant critique of Ibn Sinnäs apparently necessitarian picture of creation, for Maimonides' cultural context was thoroughly Islamic. ${ }^{15}$

The opening lines of Abū Naṣr al-Fārābī's cosmological/ political treatise, Mabādi arā̄ ahl al-madīna al-fādila [On the perfect state] offer the following straightforward assertion of the original distinction, with clear intimations of the metaphysical one:

The First Existent is the First Cause of the existence of all the other existents. It is free of every kind of deficiency, whereas there must be in everything else some kind of deficiency. . . but the First is free of all their deficiencies. Thus its existence is the most excellent and preceded every other existence. No existence can be more excellent than or prior to its existence. Thus it has the highest kind of excellent existence and the most elevated rank of perfect existence. Therefore its existence and substance cannot be adulterated by non-existence at all. It can in no way have existence potentially, and there is no possibility whatever that it should not exist. ${ }^{16}$
He continues with a host of nearly equivalent statements, capped by: "it is the existent for whose existence there can be no cause,.. and it is impossible for anything else to have the existence it has." Note that he has not taken the boldest step of all: to identify the First in what it is (its essence) with existing, for he still speaks of the First as "having" existence. But he has taken us to the brink, by

[^27]emphasizing how utterly different is the "First Cause" from all that emanates from it; that is, from all else. Ibn Sīnā, with Maimonides in his wake, makes that further precision.

Ibn Sīnā takes the next step of integrating the original (creator/ creature) distinction into the very metaphysical "composition" of every created thing, thereby offering a signal innovation to Aristotle's metaphysics of substance. This may indeed reflect his awareness of the aporia that Edward Booth has identified as central to the Aristotelian tradition: that between the essence of a thing and the individual thing itself. ${ }^{17}$ Aristotle had, of course, taken pains to identify the individual existing thing with its essence, precisely to avoid Plato's notorious "third man" argument; much as he had insisted that the paradigm for substance is the individual existing (even better, living) thing. Yet when it came to his exposition of substance in book Lambda (VII) of the Metaphysics, the best he could do in explicating substance was to identify it with form. ${ }^{18}$ So in the end, if you will, Plato won, despite Aristotle's opening polemic (in the same book) against Plato's apparent insouciance for individual things. This aporia recurred throughout the commentary tradition, which largely attempted to suppress it rather than address it; much as it will emerge in the course of an introductory class. Nor did Ibn Sīnā himself succeed in neutralizing it, though the distinction he proposed helped others to resolve it. Like Aristotle, in other words, he has the essence in mind, but unlike Aristotle, he needs to offer an explicit account for its existing only in individuals. That is, of course, Aristotle's anti-Platonic assertion, but he was unable to explain how it works; while Ibn Sīnā saw clearly that Aristotle's paradigmatic individual existence cannot be accounted for by the essence itself. So, in what we might dub a neo-Platonic manner, Ibn Sinā identified essences with possible beings, and asserted that, "as regards the possible existent, . . . it necessarily needs some other thing to render its existing in actuality." ${ }^{19}$

[^28]As if to show how the distinction for which he is reaching reflects the original distinction of creator from creatures, Ibn Sinā draws the contrast in philosophical language. There is one alone whose existence is necessary, and that One, "the first, has no essence [mähiyya] except in its existence [anniyya]." So necessary being has no essence [mähiyya] except that it be necessary being, and this is its existence [anniyya]. ${ }^{20}$ By proposing another term for the essence of necessary being, dhāt, Ibn Sīnā intended to remove consideration of its whatness from that attending creatures, whose quiddities [the Latin answer to the question 'quid est?, or 'what is it?', as mähiyya functions in Arabic] will ideally be articulated in the normal form of genus/species (e.g., 'speaking animal'). Contrary to the essence of the one necessary being, however, Ibn Sīnā’s insistence that all other essences require something else to bring them into existence introduces a new mode of composition into all creatures, beyond that of matter and form, which he presumes throughout: one of essence [mähiyya] with some other factor that causes the individual thing to be. That factor is never identified by Ibn Sīnā; the elusive term anniyya expresses the "real existence of a particular individual" rather than identifying what it is that makes the individual exist. Yet by distinguishing what something is from that which makes it be, he seeks to introduce a notion of essence without any qualification: "mere essence," best parsed as what the normal formula (e.g., 'speaking animal') signifies. Neither universal nor particular, essence is taken simply as what can be predicated of individuals, in which it alone exists, thereby formulating what Aristotle was reaching for. (C. S. Peirce shows how the modern proclivity to identify essences with universals misses the point of the relation peculiar to predication; for in saying that Socrates is a man, we are not saying something universal about him, but simply stating what he-in all his individuality-is.)

So far, so good; a brilliant stab at the kind of reformulation of Aristotle required to accommodate the grounding fact that all such substances are created. Yet some infelicities remain. One respects identifying such essences with possibility, and doing so in such a way that "they" receive existence, which he would name (in Arabic) as an "accident," or something which "happens" to essence. Ibn

[^29]Rushd fastens onto this error, which any student of philosophy can quickly identify: if existing is an accident, there would have had to be something in which it could inhere. But "simple essences" cannot be said to be, nor is it possible for there to be anything to receive existence. Later commentators on Ibn Sinnā will neutralize the aporiae stemming from a simple-minded identification of existing with an ordinary accident, but the dilemma imbedded in the language of "receiving existence" will perdure. ${ }^{21}$ The identification of "simple essences" with possibility, and especially with "possibilities," extends to discussions in our day, so Ibn Sinnā cannot be said to have the last word, either on the subject itself, of relating created to uncreated and creating being, or on the distinction intended to suggest that relation without pretending adequately to display it.

Ibn Sinä's distinction set the stage not only for comparing essence with existing, but also for employing the distinction itself to find something of their source mirrored in creatures. Yet since the essence of a thing corresponds quite simply to what it is, and revelation tells us that things are created according to their kinds, essences structure the created universe without bespeaking its dynamic. So the obvious candidate for articulating the founding relation of creation would seem to be existing. Yet when it came to articulating that relation, Suhrawardì contented himself with the classic metaphor of light to model the issuing forth of creatures from the creator. ${ }^{22}$ Moreover, in this respect, Mullā Șadrā parted company with his distinguished master, Mïr Dāmād, who may be considered the founder of the illustrious "school of Isfahan" in which Mullā Sadrā can be located. ${ }^{23}$ Hamid Dabashi offers this translation of Mīr Dāmād's way of arguing for the primacy of essence over existing:

The essence of a thing, in whatever shape or format it might be, is the occurrence of that very thing in that vessel; not the attachment or appendage of something

[^30]to it. . . . Yet the bringing into being of a thing in itself is the bringing-into-being of that thing in that thing. ${ }^{24}$
Taken by themselves, these words do little more than re-state philosophers' general predilection for essences as grounding "scientific" inquiry into things by their kinds. Little or nothing is said about the "bringing-into-being" of things. So we might be prepared for Mullā Ṣadräs passionate recounting of his "conversion" from this default position:

In the earlier days I used to be a passionate defender of the theist [belief that] the quiddities are extramentally real while existence is but a mental construct, until my Lord gave me guidance and let me see His own demonstrations. All of a sudden my spiritual eyes were opened and I saw with utmost clarity that the truth was just the contrary of what philosophers in general had held. Praise be to God who, by the light of intuition, led me out of the darkness of the groundless idea and firmly established me upon the thesis which would never change in the present world and the hereafter. As a result [I now hold that] the individual existences of things are primary realities, while the quiddities are the "permanent archetypes that have smelt even the fragrance of existence." The individual existences are nothing but beams of light radiated by the true Light which is the absolutely self-subsistent existence. The absolute existence in each of its individualized forms is characterized by a number of essential properties and intelligible qualities. And each of these properties and qualities is what is usually known as quiddity. ${ }^{25}$
As we shall see, Mullā Ṣadräs account depends directly on Suhrawardi's master metaphor of light to depict the relation between self-subsistent existence and existents, yet identifies the active principle with existence itself. So it seems accurate to say that his move to assert the primacy of existing offers an attempt to articulate the relation between existing things and their source. We shall also have

[^31]to explore the way he identifies essences with "permanent archetypes that have smelt even the fragrance of existence," in an effort to ascertain what such "things" might be. So let us examine his sober prose rendition of this spectacular "conversion," by attending to the introductory remarks of his magnum opus, the Asfär, as they locate this inquiry in a wisdom tradition that sees our life and inquiry as a journey with significant stages.

The First Journey: from creation to the One who [alone] is real and true [al-Haqq], by way of investigating the nature of existence $[w u j \bar{u} d]$ and its essential attributes, in distinct stages. The First Stage: the knowledge which human beings require for this task, from among all the [modes of] knowing, with an introduction and six stations.
Introduction. Concerning our knowledge of philosophy with its primary divisions, its goals and its dignity.
Know that philosophy is able to perfect the human soul by bringing it to know the reality of existents according to their proper essences, as well as accurately assessing their existence by way of proofs grasped by the mind; or else accepted by tradition, as befits the majority of human beings. Now if you wanted, you could say that the order of the universe is intelligibly ordered according to human capacity, which can attain to a certain qualified resemblance [tashbih] of the Creator most High, since human beings came to be as something kneaded from dough-that is, [by way of] intelligible form together with created sensible matter-"We created man from clay, from earthy substance duly fashioned" (15:26). Yet there is also a dimension of the soul which remains independent and separate, capable of being attracted to wisdom, as is the case with the party of the zealous and whoever is endowed with power to continue inquiry into things free of matter, and such intellectual endeavors.
For inquiry with these aspirations [has the effect of] drawing out the soul, along the lines of the form of existence, to [perceive] its order, its expression and its perfection, after which it can become knowing and
rational and conformed to knowledge of things seen not in matter but in their forms, thereby adorning, [21] shaping and embellishing the soul. Indeed, this sort of wisdom is that to which the chief Messenger-praise and blessing to him-aspires as he asks in his invocation to his Lord, saying: "Lord, show us things as they really are." And also to the friend of God [Abraham] - may he be praised and blessed, when he asked: "Lord, grant me wisdom" ( $4: 83$ ). Now the wisdom in question must be right judgment regarding existence, attending to what may be needed to conceive things properly.
So it is clear that such an inquiry will entail a spiritual journey, as intimated in the very title of the work itself, and clarified in these introductory remarks. As we shall see, each thing is linked with its creator by its very existence, so the link itself will share in the inexpressibility of God. In this way, a philosophical inquiry into existence cannot be a merely conceptual (or "abstract") endeavor. It is fascinating to note how carefully Mullā Ṣadrā proceeds, altering ways of inquiry already standard to "philosophers," notably Ibn Sīnā, to meet his stringent demands for articulating existence as the link of creatures to their creator.

So it seems that the best way one can proceed here is by an interior path, since there can be no definition of existence, and so no demonstration regarding it. For definition and demonstration can only proceed when the definitions concern those things between which we can distinguish [by weighing them] on proper scales. But what if one must believe what one cannot perceive, without perceiving anything else preceding it? So, for example, when we wish to know whether intelligence exists, we must first have arrived at yet other beliefs, yet will certainly come in the end to a belief without any other belief preceding it [27], indeed one necessarily [imbedded] in the soul, offering a primary elucidation from the intelligence itself-like saying that something is a thing. ${ }^{26}$ For a thing has nothing contrary to it; while

26 Avicenna on being as the first notion in the intellect: "We say: ideas of 'the existent', 'the thing', and 'the necessary' are impressed in the soul in a primary
two contraries cannot come together, nor can one be elevated above the other in position or according to position, for were one to reason that way, one would be entering the realm of conceptions. ${ }^{27}$ Yet here there is no need to begin conceiving prior conceptions, as one must in any [sequence of] conceptions, for [any such sequence] will certainly be able to be traced back to an initial conception-like necessity, possibility or existence-not dependent upon a preceding conception. Now these conceptions, and those similar to them, provide trustworthy meanings at the very center of the intellect, inscribed in [our] intelligence by the inscription of the first intelligence [fitr]. So when one intends to clarify these meanings by way of kalām, that can act as a stimulus to the mind, [turning them into] objects of attention by focusing on them as significant signs among the other items at the center of the intelligence. Indeed, these [conceptions] are better known than others, since they do not come to the mind from things.
So existence will partake of the primary notions available quite naturally to intellect, yet there will be further peculiarities with this "notion" which must be more than a notion, since what it expresses cannot properly be expressed in a predicate form. For that reason Ibn Sinā̄s strategy of articulating existence as something which "comes to" [arada, accidit] the essence will not do, for existing must be more interior to existing things than a feature of them could ever be. One way to see this is to remark on the inherently ambiguous character of the term 'exists' as we apply it. And closely linked to that, we shall notice his recourse to participation. He begins chapter 2 by announcing its subject.
[1.35] On understanding [that] participated existence [is] predicated according to the ways in which what [participates in it] comes under it: gradated predicates rather than conventional predicates.

[^32]Given that essences participate in existence in such a way that existence brings them nearer to the first beings, it is also the case that intelligence mediates between one existent and another by way of relation and similarity, while nothing can mediate between an existent and nothingness. For if existents were unable to participate in a [single] understanding, so that they would differ in all respects, their situation would be like that of existence with respect to nothingness: no relation at all between them. . . . But we have here before us an infinity of things that can be understood, though one can only consider each one of them singly, asking whether it participates [36] in existence or not; unless it were [clear that] its existence is participated, so one would not need to inquire into it. ... Regarding existence being attributed to what is below it in gradated ways-that is, regarding their being unities or one or eternal or perduring-existence in some existing things is determined by their essence, while in others it issues from them by way of nature, while in still others it will be perfected and powerful. Now the existence which has no cause has primacy over what takes its existence from another, and so is naturally prior to all existing natural things. Similarly the existence of each one of the active intelligences is prior to that of subsequent ones, as the existence of substance is prior to the existence of accidents.
The Aristotelian way of speaking of "systematically ambiguous" discourse, which Aquinas will ennoble as "analogous," proceeds "according to prior and posterior." ${ }^{28}$ Mullā Ṣadrā explores this route to help us see how terms used equivocally may lead to unambiguous understanding.
[37] Indeed, without considering existence, there can be no priority or posteriority, since being prior or posterior, perfect or deficient, strong or weak, are found in existents,

28 G. E. L. Owen, "Logic and Metaphysics in Some Earlier Works of Aristotle," in Aristotle and Plato in mid-Fourth Century, ed. I. Düring and Owen (Goteborg, 1960).
which properly give rise to them without [needing] any other thing. For with regard to things and essences taken in themselves, their existences do not properly belong to them, as you saw again quite clearly in this chapter, following the investigation of such ambiguities in this book, where it has already been clarified how existencein so far as it can be understood-is something common to be predicted of existing things according to differences and not merely conventionally.
Yet the most telling ambiguity in the term "existence" stems from its ordinary use to identify individuals, by contrast with its more "philosophical" use as "common existence," an ambiguity already present in Aristotle's Metaphysics. Mullā Ṣadrā takes great pains to separate these two meanings in chapter 3: "That common existence, [known] spontaneously, is equivalent to intellectual existence, and so differs from what subsists or is individual."

So we [must] say: this distinction between things and existence is not part of our comprehension of existing things, but involves attempting to grasp them together in general terms, which is like melding two discourses. For the being of an existent may or may not involve things other than existence, but its existence will shine forth in the measure that what is fitting to it emerges from the properties of a thing rather than from an attempt to comprehend existence itself. What Ibn Sinā says in his [book on] metaphysics (al-Shifäa) clarifies this: "necessary existence is already understood by the very [expression] 'necessary existence,' just as unity is already understood by the very [expression] 'one"' (al-Shif $\vec{a}^{\top} 1.6$ ). Now one can understand by this either that the essence of necessary existence is like that of humanity, or that it is an essence quite different from other essences like humanity; it simply is what it is: necessary existence. Recall what we understood about unity: whatever anything is-something or its very self or humanity, it remains one. So let it be said: we must distinguish unity or existent as essences attributed to
something, from unity and existent in so far as a thing is one and existent.

This last animadversion should remind us of Plotinus' insistence that we cannot even say that the One is one! So existing, as what links the One with the many, will share in that same ineffability. Yet now, it appears, Mullā Ṣadrā is ready to say what can be said.

Moreover, the following corollaries must be noted as well: should I be asked whether existence is existent or not, the answer should be that it is existent in the sense that the true reality of existence is existent: that is, existence is what existentializes. This can be confirmed by what is found in renowned commentaries, namely that understanding a thing need not involve an understanding of speech, for example, unless there be an accident shared within the field. Yet were one to consider the derived expression to be adequate to the thing [itself], matter would be transformed into a proper potency. [42] Hence that thing to which laughter belongs is human, which necessarily affirms the thing as what it is; for to speak of the thing in interpreting what follows upon [such considerations] can show clearly why the mind which speaks of it returns to it, which seems to be the way some recent thinkers consider the union of accidents with accidentality, but that cannot be verified. [43] Yet those allusions regarding the soul and the separate substances above it as unadulterated individuals and pure existences, presented by the divine shaykh [Ibn 'Arabī], might lead in that direction. But I cannot understand how he could be thought to have denied that existence is something happening to individuals, or if so, whether the contradiction is only verbal.
In other words, Ibn 'Arabī cannot elide the central insight of Ibn Sinnā regarding the crucial distinction of creator from creatures, as between that which exists "by right," and that to which existing is granted. Mullā Ṣadrā attempts to express this existing yet more intimately:

So we [must] say: if existence were not an individual true reality [haqīqa], distinct from the properties [a thing has], how could essences differing in themselves ever be described? Or different levels [of things]? Yet they are described in this way. Now necessary existence has no need of a cause to be what it is, while the existence of possible [beings] differs from it essentially. Nor can there be any doubt of the difference, by way of negation or privation, between need and lack of need regarding the necessity of essences or levels of essence. Therefore there can be no doubt that there is in every existent something beyond its properties: namely, understanding it to exist. Otherwise, how could existences differ essentially, as even those who go astray suggest; or [how could there be] different levels [of being], as yet other sects have noticed? Yet sheer generality, by analogy with properties, yields species without any differences. . . . To realize this, [know that] existence itself establishes the essence, for a thing is not established in its essence unless there be a way of proposing the essence be established. . . .
As the master [Ibn Sīnā] said in his inquiries: . . . existence which has emanated from another has its being dependent on that other, and subsists in it as though bestowed from another which subsists according to an existence necessary in itself (al-Shifă 1.6 ). Now the subsistence proper to a thing cannot be separated from it since it is proper to it. And he says in another place concerning this: either existence requires another and so is in need of another to subsist, or it is so well endowed with it that its subsistence is proper to it. So it would not be true [in general] that existence exists requiring another and depend on it as though it were not true that existence [also] exists well-endowed and independent, without subsisting from another but rather as an unlimited true reality. I say that a sensible intelligent person, exercising the power of intuition, understands from this discussion why we [47] resist proposing a demonstration of these matters, notably with respect to that time in which all
possible existents and ordered individuals depend on necessary existence for their consideration and their nature, along with the diffusion and blockage of light which does not subsist independently with respect to its very essence [huwiyya]. Now it is not possible to perceive [a thing's] proper individual essence separate [from this dependence, any more than we can perceive] individual existents independently, since what is natural is also dependent upon another. . .
Differing from a true reality [essence] in that it is pure individual realization and the bearer of individuality, [existence is what] individuates without needing any property to identify it. On the contrary, by its union with every essence it affords distinction and realization to the essence, bringing it out of obscurity, ambiguity, and concealment. For true existence appears per $s e$ in all its ways of appearing, so appearing [69] in everything else that essence appears to, with, in, and from existence. . . [71] It is as though one were to think of the degrees of existences as glowing with the light [proper to] necessary true realities, manifesting the true divine existence as it is manifested in the form of individuals, colored with the colors of possible essences, yet blocked by their created forms from [manifesting] the identity of the divine necessity.
While there can be no demonstration of these matters, primarily since existing defies definition, we are nonetheless led to realize that we cannot understand created things properly without a sustained attempt to grasp the internal link they have with the creator in their very existing. Yet while this mode of inquiry exceeds the bounds of philosophical inquiry as normally practiced by Islamic philosophers like Ibn Sinā, it is arguable that they too realized that an authentically philosophical search must move into these more esoteric arenas. ${ }^{29}$ Yet Mullā Ṣadrā’s inspiration is clearly Ibn ‘Arabī. It is that connection which needs to be more thoroughly explored.

[^33]
## Ibn 'Arabi: "rationalizing mystic"

If Suhrawardī provides the indispensable background for Mullā Sadrā, Ibn ‘Arabī offers the bridge from Suhrawardī to Mullā Ṣadrā, by way of intensifying the "therapeutic" role of philosophy signaled to us by Pierre Hadot, in essays Arnold Davidson introduces with a phrase from Wittgenstein: "philosophy as a way of life." ${ }^{30}$ Sajjad Rizvi adopts the descriptor "rationalizing mystic" from Philip Merlan's way of depicting "later Neoplatonists, [to convey] absolute transparency between the knower, the known, and knowledge itself" in such a cognitive relation to the creator God. Indeed, what specifies this cognitive manner of relating to the creator, as articulated in "illuminationist [ishrāqī] philosophy, is its integration of spiritual practice into the pursuit of wisdom. ${ }^{3{ }^{31}}$ What is sought here is a way of articulating the relation itself between creator and creatures, parallel to that between existence and existents, a relation which one knows to be unique, unassimilable to relations between existents. Here the celebrated "distinction," articulated (albeit differently) in Ibn Sīnā and in Aquinas, is intensified by insisting that the One alone exists. Ibn 'Arabī uses Qur'ānic language to intimate the manner of bestowing a share of that existence on existents: He originates and brings back (85:13). While this verse had been understood to refer to "God's bringing people back at the resurrection," Ibn 'Arabī offers a more metaphysical reading linked to the conserving dimension of creating:

There is no existent thing to which the Real gives existence without finishing with giving it existence. Then that existent thing considers God and sees that He has come back to giving existence to another entity. So it continues perpetually and endlessly. ${ }^{32}$
God's creating takes the form of command, the "engendering command" God said: 'be' and it came to be (16:40). Though the Qurān is largely concerned with God's "prescriptive commands," the "Be that

[^34]brings creation into existence moment by moment is ... the more basic." ${ }^{33}$ Ibn 'Arabī's contribution to this essentially Qur'ānic view of God's creating lies in his identifying the ensuing relation with a Qurānic term adapted to this use: barzakh. "It stands between Unbounded wujūd [existence] and absolute nonexistence" in this way:

When the cosmos becomes articulated as the words of the All-Merciful, it reflects three fundamental realities from which it emerges-wujūd [existence], the Highest Barzakh, and nonexistence. . . Just as the Highest Barzakh brings together $w u j \bar{u} d$ and nonexistence, so also the cosmic barzakh brings together spirits and bodies. Through its very essence, a barzakh possesses the properties of the two sides. ${ }^{34}$
In other words, we are focusing on the ineffable relation between creator and creatures, to which Ibn 'Arabī finds an epistemological parallel in the imagination, posed as it is between intellect and sense, spirit and bodies. Yet the key to this partitioning is the unique relation to the creator.

Salman Bashier has delineated the key function of the barzakh as attempting to elucidate the relation between creator and creatures as the space of union-in-difference which characterizes such a form of knowing. ${ }^{35}$ Identified Qur'ānically as the barzakh, or the isthmus between heaven and earth, it represents the limit of human understanding which also serves to relate it to its source. As such, it is the "third entity," represented epistemologically as "the perfect man." This intermediate place is identified by Ibn 'Arabī with the "imaginal world," referring to the way in which "the cosmos is real, but its reality consists in the fact that it is/is not the real [Haqq]."36 Citing Chittick, we are reminded how,
according to Ibn al-'Arabī, the Realizers' [who have the
knowledge of the Saint: ‘ärifūn] answer to every question
33 Ibid., 251.
34 Ibid., 259.
35 Salman Bashier, Ibn al-Arabī's Barzakh: Concept of the Limit and the Relationship between God and the World (Albany: State University of New York Press, 2004), 68.

36 Ibid.
> concerning God and the world is "Yes and no," or, "He/ not He" (huwa lā huwa). This is "because the cosmos is imagination, and imagination is that which stands in an intermediary situation between affirmation and denial. About it one says 'both this and that' or 'neither this nor that.' The universe is neither Being nor nothingness, or both Being and nothingness." ${ }^{37}$

How else can a believer refer to created things, except to allude to their emanating from a creator as the continuing source of their being? Yet since what links them, being, cannot be a feature of things, we have no direct way of expressing the relating of creatures to their creator beyond (as Aquinas expresses it) to insist that their being must be a "being-to-the-creator."

Yet such a situation cannot but be paradoxical, since authentic knowledge of the source of being must be of One beyond our comprehension: "the possessors of knowledge see that their reason delimits everything that it knows, while the divine Essence remains beyond delimitation. Thus they come to know that the only knowledge about God that reflection can provide to reason is the knowledge of what God is not." ${ }^{38}$ This carefully constructed sentence deserves attention: knowledge, for reason, can only be "knowledge about" something, whereas the knowledge that seekers seek is "knowledge of" the One, which can only be parsed by reason as "knowledge of what God is not." Bashier cites Nicholas of Cusa at this point, for whom "the Essence of God can never be found, since it is beyond all limits," ${ }^{39}$ yet Ibn 'Arabī highlights this limit-situation by inviting a dialectical exchange between those in his tradition who declare God incomparable [tanzih] and those who declare God comparable [tashbih]: "this attitude holds that each of the contradictory views regarding the knowledge of the Real can be correct from a different perspective, despite the fact that the two views are exclusive to each other. The attitude of complementarity comes very close to the true knowledge of the Real." Another way of putting this is to parse Ibn 'Arabi as "saying that there is something that ties the real to creation, but that this something is not something added to

[^35]the real and creation. He is actually stating that there is something and that this something is nothing; . . . the closest definition of the limit situation. ${ }^{30}$ So readers are taxed to follow this philosopher into regions which lie beyond the articulation to which philosophers have become accustomed, a space epitomized by Ibn Rushd. Yet what impels philosophy beyond itself is the call to articulate the faith assertion of free creation. This exercise in philosophical theology itself displays the contours of that hybrid inquiry.

However difficult it may be for contemporary philosophers to follow such a hybrid inquiry, especially those who cannot avail themselves of a faith tradition of free creation, all could nevertheless be assisted by Chittick and Bashier to move beyond the stereotype of Ibn 'Arabī as a "monist"-that is, one who elides "the distinction" of creatures from creator. For the precise function of the barzakh is to highlight the relation between creator and creatures, which however paradoxical it may be for us to formulate, remains a relation, even though comparing it to an ordinary relation between creatures effectively elides creation itself-as Maimonides saw so clearly. On this reading, what makes Ibn 'Arabī so radical is not a heretical denial of "the distinction" between the One and all-that-is, but rather a thoroughgoing attempt to keep that distinction from being so trivialized that the One ceases to be "the One" or "the Real," and becomes "the biggest thing around." ${ }^{41}$ Yet to negotiate such paradoxical articulation demands the practice of a set of "spiritual exercises," as we have noted to be the hallmark of classical Hellenic philosophy as well as of later Islamic philosophical theology, yet already intimated in the later allegorical writings of Ibn Sinā.

## Concluding Remarks

There are many other features of Mullā Ṣadrā’s thought worthy of attention, for which clear treatment can be found in Jambet, Nasr, Ziai, Rizvi, and most recently in Bonmariage. ${ }^{42}$ Hamid Dabashi ${ }^{43}$ gives especially illuminating "deep background" on the sociopolitical

40 Ibid., 139.
41 David Burrell, "Creation, Metaphysics, and Ethics," Faith and Philosophy 18 (2001): 204-221.

42 Cécile Bonmariage, Le Réel et les réalités: Mullā Ṣadrā Shīrāzī et la structure de la réalité (Paris: Vrin, 2007); Jambet, Lacte détre; Ziai, "Mulla Sadra"; Rizvi "Mysticism and Philosophy."
43 Dabashi, "Mir Damad."
situation in Isfahan and Shiraz, which helps us to appreciate the difficulties which philosophers faced in this time of otherwise spectacular development and opulence. I have focused on the relation between creator and creatures, and Mullā Ṣadrā’s identification of existence as the philosophical strategy for articulating that relation in order to offer some suggestions how his inquiry may attend to issues that continue to bedevil philosophical theology.

# Mullā Ṣadrā’s imāma/walāya: An Aspect of His Indebtedness to Ibn 'Arabī 

Shigeru Kamada

This brief paper examines the role of the Shaykh al-Akbar Ibn 'Arabī (d. 1240) in the formation of Mullā Ṣadrās thought, by examining the short passages that he quotes from an Akbarian text.

Ibn 'Arabī's thought has been widely disseminated in Muslim countries from Andalusia to China. ${ }^{1}$ The philosophy of Mullā Sadrā (d. 1640) was also heavily influenced by the worldview of Ibn 'Arabī, often epitomized in the doctrine of the Oneness of Existence (wahdat al-wujūd). ${ }^{2}$ All existents are different manifestations of the Absolute, which is technically explained as manifestations of the absolute non-articulated Existence. However different they are, all existents are one in the sense that all are different manifestations of the same Absolute. Mullā Ṣadrā reformulates this mystical intuition in his philosophy and presents the thesis of the Primacy of Existence (aṣālat al-wujūd). ${ }^{3}$ He grasps different existents as different modes or different articulations of one Reality, namely, Existence, giving them their reality with different shades of meaning. Their identities, insofar as they are different from others, derive from their corresponding different quiddities (mähiyya), which are

[^36]mentally constructed in the human mind. Through their quiddities, non-articulated Existence transforms itself into actual things different from each other. Similar to Ibn 'Arabī’s worldview, Mullā Sadrā intuits unity or oneness in different existents of the phenomenal world in the depth of pure Existence. In this way, Ibn 'Arabī and Mullā Ṣadrā share the same kind of mystical intuition, that is to say, the actual phenomenal world seemingly consists of many different things, but is one in the real sense, because seemingly different things are simply different manifestations of the same Absolute or Existence.

In Ibn 'Arabī's thought, the idea of the Perfect Man (al-insān al-kāmil) also plays an important role as a mediator of the process of the self-manifestation of the Absolute in the actual world. ${ }^{4}$ A hierarchy of a series of Perfect Men spiritually controls the world. In his discussion of the spiritual hierarchy, Ibn 'Arabī introduces such various notions as messengership (risāla), prophethood (nubuwwa), and sainthood (walāya), in addition to Sufi terms like pole (qutb), pillars (awtād), and substitutes (abdāl). His idea of spiritual hierarchy has enormously influenced later Islamic mysticism, as well as Shī̄ī mystical philosophy, ${ }^{5}$ in which Mullā Ṣadrā’s work is counted.

It is clear that Mullā Ṣadrā is heavily indebted to his great predecessor Ibn ${ }^{\text {c }}$ Arabī, especially in his formulation of the Primacy of Existence, which has a cardinal significance in his philosophy. Although the concept of al-insān al-kāmil or walāya may not occupy such an important position as wujūd in his system of thought, Mullā Sadrā discusses the issue in some of his works.

[^37]In his al-Shawāhid al-Rubūbiyya [Divine witnesses], ${ }^{6}$ one of the smaller compendia of his philosophical system, Mullā Ṣadrā deals with various topics on prophethood and, in its last part, with sainthood. In the present study, I take the idea of prophethood, or sainthood, and show Mullā Ṣadrās indebtedness to Ibn 'Arabī in a more concrete way.

## Mullā Ṣadrä’s Idea of Sainthood ${ }^{7}$

The human being who attains a degree of perfection combines in himself the three worlds that correspond to the different principles of cognition of sensation, imagination, and intellection. ${ }^{8}$ He who reaches the stage of comprehensiveness (jam'iyya) of the perfection at these three levels is one of the very few men who has the status of the divine vicegerency (al-khiläfa al-ilähiyya) and is entitled to the leadership (riyāsa) of human beings (khalq). He is called a messenger ( $r a s \bar{u} l$ ) of God. Thus, the person who combines three levels of perfection in himself can be called a prophet in a general way. ${ }^{9}$

According to his emanative cosmic view, all knowledge is eternally recorded (predetermination, qada $\bar{a}$ ) in the Preserved Tablet, which is never altered. From the Tablet located at the intellective level, the noble tablets at the psychic level receive emanation in the form of imaginal forms. When human souls establish a connection with the noble tablets, they receive the imaginal forms, which are knowledge of the particulars. The knowledge that the messengers of God transmit to people can be explained as emanation of realities from the One with the intermediary of the Preserved Tablet and the psychic tablets. ${ }^{10}$

Mullā Șadrā enumerates three channels of the soul's reception of knowledge. They are [1] acquisition (iktisäb), [2] inspiration [or intuition] (ilhām, hads), and [3] revelation (wahy). These three

[^38]channels are specific to the ordinary speculative thinkers (nuzzār), saints (awliy $\vec{a}$ ), and prophets (anbiy $\vec{a}$ ), respectively. The common characteristic that acquisition and inspiration share is the knowledge acquired through either channel; a knowledge that is based on the emanation of forms of knowledge (fayadān al-suwar al-'ilmiyya). The only difference is the ways the veils disappear and its direction. In a similar way, the difference between inspiration and revelation is a matter of degree; namely, difference of intensity of clarity (wudūh) and of luminosity (nūriyya). They are common in receiving knowledge through angels, that is, the productive intellects (al-ruqūl al-fačala), and the difference between them is that one (i.e., revelation) is accompanied with the vision of an angel, while the other is not. In this way, the substance of the revelatory knowledge consists of emanated forms, just as that of speculative thinkers, but it completely differs in its intensity from knowledge of inspiration or acquisition. ${ }^{11}$

Of all creatures, human beings unite in themselves angelic and animal aspects, and are higher in degree than either angels or beasts because of their comprehensiveness. Among the various groups of human beings are those who sit on the common border between the world of the intelligible and that of the sensible. They are sometimes with the Absolute (al-Haqq) in His love, and sometimes with creatures (khalq) in mercy (rahma, shafaqa) to them. They are messengers ( mursalin) and saints (șiddīqī). ${ }^{12}$ They comprehend in themselves the two aspects, namely, the intelligible realm and the sensible. They can receive divine messages and give proper guidance to their fellow men. They can communicate either with God or with creatures. Thus, they are men who have the most comprehensive ability, and, therefore, occupy the highest position among creatures. The prophets or the messengers of God come under this category of human beings. In Mullā Ṣadrā’s understanding, prophets in general have two kinds of specific abilities; one is the ability to receive knowledge from the Preserved Tablet, and the other is a keen sense perception that affects matter and causes miracles. ${ }^{13}$

Mullā Sadrā elucidates the necessity of prophets in the following way. Human beings cannot live as isolated individuals,

[^39]and civilization, society, and cooperation are necessary for them when they live in this world (duny $\bar{a}$ ). They are essentially social beings. Without the regulation of the social life, they would violently compete with each other; all of them would perish and their progeny would cease to exist. The divine law (shar ${ }^{\text {c }}$ ) is absolutely necessary for the existence of human beings. From the necessity of shar ${ }^{\text {c }}$, a lawgiver (shāric) is naturally indispensable. A lawgiver must be human, because angels cannot properly work on the earth to teach human beings and animals cannot lead them because of their lower status. ${ }^{14}$

In sum, the prophet is a comprehensive existent who comprises in himself perfection at the intellective, psychic, and sensual levels. He receives knowledge as emanation from the Absolute One with the intermediary of the cosmologic psychic tablets. At the same time, as a human being, he communicates his knowledge, or sharī ${ }^{-} a$ to his fellow people with miracles if necessary.

## Mullā Ṣadrā’s Adaptation of Ibn 'Arabī's Text

As discussed, divine law and its transmitter, namely the prophet, are indispensable for human existence. The question arises, how do human beings order their lives once the prophet passed away? Divine law that the Prophet left is enough. This is one possible answer. But there are those who are not satisfied with this answer and search for an extension of the idea of a prophet. In addition to Ibn 'Arabī, Mullā Ṣadrā in particular and Shǐa in general are among them.

In the last section of the Shawāhid al-rubūbiyya, ${ }^{15}$ Mullā Șadrā discusses the problem of the continuation of prophethood. This section is an almost complete quotation from Ibn 'Arabī's magnum opus, al-Futūhāt al-Makkiyya (Meccan Revelations), though the name of the original writer is not mentioned. ${ }^{16}$

[^40]With regard to the continuation of prophethood, Mullā Șadrā
in the sense of Islamic jurisprudence. However, from one of Mullā Ṣadrā’s minor works, the Kitäb al-'arshiyya (Arabic edition and Persian translation by Ghulām Ḥusayn Āhanī [Isfahan: Intishārāt-i Mahdawī, n.d.]), 64; English translation by J. W. Morris in The Wisdom of the Throne-An Introduction to the Philosophy of Mulla Sadra (Princeton, NJ: Princeton University Press, 1981), 233-234), we know that 'ulam $\vec{a}$ (fuqah $\vec{a}{ }^{\prime}$ in another reading in the footnote) and mujtahids are the followers of the Prophet (nabī) and his Trustee (wasī), both in the rational sciences ('ulūm 'aqliyya) and in the legal understanding (furū̌‘ fiqhiyya) until the Resurrection. About the ‘ulamä’s authority, another of his works, al-Mabda' wa-l-máād, ed. S. J.-D. Āshtiyānī (Tehran: Anjuman-i Shāhanshāhi-yi Falsafa-yi Īrān, 1354S/1976), 489 mentions that the 'ulamä are mediators (wasāit ${ }^{\text {t }}$ ) between the Imams and the general believers ('awāmm).

In the same paragraph (377) of the Shawāhid where appears the word mujtahid to which the present note refers, Mullā Ṣadrā, based on Ibn 'Arabī, states that they (ahl al-dhikr, taken from Q 16:43, i.e., mubashshir, imäm and mujtahid in his context) give him (who lacks knowledge) formal legal opinions ( $y$ uftūna-hu) through that to which their independent judgment (ijtihäd) leads, and again, that to everyone a mujtahid provides law (shir $a$ ) out of his proof (dalil). He also writes on the following page (378) that after the awliy $\bar{a}$ take it (al-warätha; divine inheritance) as the Prophet's inheritance, the scholars of formalities ('ulamā’ al-rusūm) take it (al-warātha) in place of forefathers (I read khalafan 'an salafin, based on Ibn 'Arabi's text, instead of salafan 'an khalafin in Mullā Ṣadrā’s) until the Day of Resurrection.

In the Shawähid and some of his other works, Mullā Ṣadrā presents his discussion on the mujtahid in a framework of Islamic legal thinking, namely, that a mujtahid is qualified as a scholar of the formal aspect of religion, with a function of giving a fatwā. From his several references above to mujtahid, we may infer that in Mullā Șadrā’s understanding, the 'ulamä', or mujtahids, serve as intermediaries between the Imams and the general believers until the Day of Resurrection and that their important function is that of the Islamic jurists as the heirs of the Prophetic authority.

Mullā Ṣadrā does not discuss law a great deal and, therefore, gives us no clear view of his understanding of it. However, his sporadic references to legal matters, in which he seems to use the word ijtihād in a legal sense, may lead us to understand that he is sympathetic to a rational type of jurisprudence in which ijtihād has a significant role. Since the passages that refer to mujtahid in the Shawähid are based on Ibn 'Arabi's text, the opinion expressed there may not exactly reflect Ṣadräs own idea. However, he quotes them from Ibn 'Arabī without alteration while he changed the texts in other quotations where he thought changes necessary. It seems to me, therefore, that Mullā Ṣadrā accepts the authority of mujtahids as heirs of the Prophet and Imams. His position might be close to that of the Shīic Ușūlī school, though he has no clear reference to Ușūlī or Akhbārī legal positions. Sajjad H. Rizvi's judgment of Mulla Ṣadräs legal position may be what we can say in the present state of research. Cf. Sajjad H. Rizvi, Mullā Ṣadrā Shīrāzī: His Life and Works and the Sources for Safavid Philosophy (Oxford: Oxford University Press, 2007), 45.
(based on Ibn 'Arabī) states that, though prophets or messengers of God disappear from the earth and their message of God's revelation is interrupted with their death, "Prophethood (nubuwwa) and messengership (risäla), insofar as their quiddities and essential mode (hukm) are concerned, neither cease to be nor perish. ${ }^{1{ }^{17}} \mathrm{He}$ thinks that a certain essential part of prophethood is enduring and continues in different forms. Even after the disappearance of the prophets or the messengers, the prophetic authority remains in the form of bringers of good news (mubashshirāt), the infallible Imams (al-a'imma al-ma'șūmin), and expert jurists (mujtahidīn), though the titles of prophet or messenger are not applicable to them.

As he mentions, "Saints (awliy $\vec{a}$ ) have an especially large fountain in this messengership (risāla), ${ }^{18}$ the saints of God have very close common characteristics with the prophets and messengers. The term "prophethood" (nubuwwa) in this context of his thought is used either as that of the prophets in a specific sense, namely, as those who receive the revelation from God through the angel of revelation, or as that of the prophets in a general sense, which is usually expressed by the word "sainthood" (walāya). The prophethood in this general sense continues in the form of the infallible Imams and expert jurists.

From Mullā Ṣadräs discussion, we understand that prophethood of such messengers or prophets as Muhammad and Mūsā stops at the time of their death, while the essential aspect of prophethood does not cease; it continues in such different forms as imams or expert jurists (mujtahids). This idea may lead to the conclusion that Shīíl Imams and Shici expert jurists embody the prophetic authority.

Mullā Ṣadrā conducts the above discussion by quoting approximately one-third of the entire text of chapter 155 of al-Futūhāt al-Makkiyya. ${ }^{19}$ The quoted text correctly reflects Ibn 'Arabī's original text, though there are some minor but important additions and omissions in Mullā Sadräs text. By examining the alterations made by Mullā Ṣadrā, I would like to clarify his understanding of prophethood and imāma. He changed four places in Ibn 'Arabī's text, as follows.

Shawāhid, 377.
Ibid.
al-Futūhāt al-Makkiyya (Beirut: Dār al-Ṣādir, n.d.), 2:252-254. Ibn 'Arabī’s text occupies some 33 lines of the total 38 lines of the last section of the Shawähid.

1. InSERTION OF "AUTHORITY OF THE INFALLIbLE IMAMS"
(SHAWĀHID, 377, L. 2)
Ibn 'Arabī's text ${ }^{20}$ mentions only the authority of mubashshirāt ${ }^{21}$ and mujtahidīn as the enduring aspect of prophethood. Mullā Ṣadrā inserts between the mubashshirāt and the mujtahidin a phrase "the authority of the infallible Imams" (حكم الأئمة المعصومين عن الخطأ عليهم) (السلام

Mullā Ṣadrā retains the two words mubashshirāt and mujtahidīn in his text without further elucidations. In comparison to imams and mujtahids, which have definite significance in $\operatorname{Shici}_{i}^{-1}$ thought, the term "mubashshirāt" has no specific Shī̄̄ equivalent. We may understand it, based on its usage in the Qur'ān, as persons qualified to convey divine knowledge. Since his insertion of the Imams after mubashshirāt gives an appositional context to mubashshirāt, we can understand them here as those similar to the Imams. While mujtahid in the Sunni usage is restricted to a small number of great scholars of law, such as the founders of the authorized schools of law, in the Shī'i usage, it refers to an expert jurist qualified to make independent legal judgments, who has the authority in everyday legal rulings in the life of Shīī Muslims. In modern times, especially, the increase of the authority of mujtahid is remarkable. In Shī ${ }_{i}^{-}$ legal theory, mujtahids derive their authority from the idea of their vicegerency of the Imams, who are, in turn, successors of the Prophet Muḥammad. From Mullā Ṣadrā’s text, we thus draw the impression that he views both $\operatorname{Shi}^{-1} \mathrm{i}$ Imams and $\mathrm{Shi}_{1}^{-c} \mathrm{c}$ expert jurists (mujtahids) as heirs of the prophethood.

How can we understand this passage in $\mathrm{Ibn}{ }^{\text {c } A r a b i ̄ ' s ~ o r i g i n a l ~ c o n t e x t ? ~}$ Mullā Ṣadrā gives no elucidations of these terms, i.e., mubashshirāt and mujtahidīn, though Ibn 'Arabī explains them in detail.

20 al-Futūhāt al-Makkiyya, 2:252, l. 3 from the bottom.
21 The word mubashshirāt is found in the Qurān 30:46 in the sense "bearing good tidings." The word mubashshir/bashir (or mubashshirūn) is, in most cases, paired with mundhir/nadhīr (mundhirūn) in the Qur'ān (e.g., 34:28, 17:105, 2:213, etc.) and refers to a prophet (nabī or rasūl Alläh). Ibn 'Arabī's usage of mubashshirät certainly has a wider connotation than that which we find in the Qur'ān. According to Ibn 'Arabỉs text (2:252, 1. 3 from the bottom), an aspect of prophethood (messengership), namely, the concrete presence of a prophet, ceases to be, while another aspect, namely, mubashshirät and hukm al-mujtahidin continues to be.

With regard to the mubashshirāt, Ibn 'Arabī presents some examples ${ }^{22}$ that Mullā Ṣadrā omits. They are told as his own experience; in a dream Ibn 'Arabī meets the Prophet Muhammad and finds that the Prophet does not like for the bier of the funeral procession to enter the mosque, or for the male corpse to be covered with an additional piece of cloth on the shroud. Further, the Prophet ordered Ibn 'Arabì himself, in his dream, to prepare hot water to conduct ablution for the major ritual impurity, since it was a cold day. In the dream Ibn 'Arabī receives knowledge directly from the Prophet. Thus it is the mubashshirāt who acquire knowledge through such a supra-sensory function as a dream. Ibn 'Arabī himself is one of the mubashshirāt. The quality of mubashshirät is, essentially, sainthood, in the context of Islamic mysticism. It has no connotation of Shí ${ }^{-}$i imāma that strictly limits its qualification to the Prophet's direct descendants.

Ibn 'Arabī also refers to mujtahid and ijtihād as related to the essential aspect of prophethood. A mujtahid is a man who is entitled to independent judgment in legal questions. Ibn ${ }^{\text {'Arabī }}$ counts as mujtahids the most respected scholars of law established in Sunnī Islam, namely, Abū Ḥanīfa, Mālik, al-Shāfíí, and Aḥmad b. Henbal ${ }^{23}$-all founders of Sunnī legal schools. Their opinions may differ from each other, but their position is high because they are concerned with the divine law (shar'), on which everything in this community (umma) is based, though their position (as mujtahids) is inferior to that of messenger of God. A mujtahid leads people to the right way, and in this way his work is similar to that of prophets or messengers of God; but the name/title (of nabī or rasūl) cannot be applied to him. A mujtahid is neither a prophet nor a messenger of God, but is an heir of the Prophet in his enduring aspect and shares a prophetic authority. Mullā Ṣadrảs insertion of the word "Imams" transforms Ibn 'Arabī's original idea that mystic saints and authoritative jurists are the heirs of the prophet into a $\mathrm{Sh}^{-}{ }^{-1}$ imamology, in which imams and (Shili) expert jurists are his heirs.

[^41]
## 2. INSERTION OF THE WORD IMĀM AFTER MUJTAHID

(SHAWĀHID, 377, L. 10)
The essential aspect of prophethood and messengership does not cease to be, "but either mujtahid or imām cannot be called prophet or messenger of God." Mullā Ṣadräs text runs in this way. But Ibn 'Arabī's original refers only to mujtahid with no mention of imām. I suggest that the addition of imām in this passage is done in order to harmonize the insertion of imām between mubashshirāt and mujtahidūn in the previous passage, which suggests that both Imams and mujtahids are heirs of the Prophet.
3. Addition of Hadīths: (Shawāhid, 377, LL. 11-14)

In order to support the thesis that saints (awliy $\vec{a}$ ) have a large share in the (enduring aspect of) prophethood, Ibn 'Arabī quotes only one hadith, namely, "He who retains the Qur'ān in his memory has a prophethood in his soul (janbay-hi)." ${ }^{24}$ In addition to this, Mullā Ṣadrā quotes two more hadiths. They are: "God has servants who are not prophets, but who are envied by prophets"25 and "In our community are those who are talked to and spoken to (by God)."26 These two hadiths may have nothing specific to Shi'i thought, but can be interpreted as referring to the Shiic Imams. The addition of hadith quotations gives much support to the enduring aspect of prophethood in those who are neither prophets nor messengers of God [i.e., Imams].

24 The text runs: "ان من حفظ القرآن قد ادرجت النبوة بين جنبيه." A similar ḥadith: "من ختت القرآن فكأنما ادرجت النبوة بين جنبيه" is found in al-Kulaynī, al-Uşūl min al-Käfí, ed. 'Alī Akbar al-Ghaffārī (Tehran: Dār al-Kutub al-Islāmiyya, 1388AH), 2:604.
25 This hadith in a longer version "لله عز وجل عباد ليسوا بانبياء ولا شهداء يغبطهم ونهر ونه "النبيون والشهداء لمقعدهم وقربهم من الله يوم القيامة is found in Ibn Hanbal, Musnad (Beirut: Dār Ṣādir, n.d.[repr. of Cairo 1313AH edition]), 5:341. See its Shī̄̄̄ versions in Muhammad Bāqir al-Majlisī, Bihāar al-anwār (Beirut: Mu’assasat al-Wafä', 1403/1983), 7:180 and 7:185. The servants (ibād) in the Shíi hadiths refer to the Party of 'Alī (shic $a t-h u$ ).
26 Muhaddath in this hadith refers to the second caliph, 'Umar, in the Sunni version, for example, Bukhārī, Șahịh al-Bukhārī (Beirut: Dār Ihyā̄ al-Turāth al-'Arabī, n.d.), 4:211; and Abū Naṣr al-Sarrāj, Kitāb al-lumá fil-taṣawwuf, ed. R. A. Nicholson (London: Luzac \& Co., 1963), 125. In the Shī'i interpretation, on the other hand, it refers to imams. Cf. al-Kulaynī, al-Ușūl min al-Käfi, 1: 270 ff. William A. Graham gives some other references in Divine Word and Prophetic Word in Early Islam (The Hague: Mouton, 1977), 37 and 46n99.
4. Omission of the word "Companions" (șAḤĀBA) and insertion of "People of the Household" (ahl al-bayt) (Shawāhid, 378, L. 2)
Mulla Ṣadrā writes: "Some of the saints take prophethood as a legacy of the Prophet, and they are those who witnessed him (Muhammad) like People of the Household." In this sentence, he regards People of the Household, namely, the direct descendants of the Prophet Muhammad, as the saints sharing the (essential aspect of) prophethood. However, Ibn 'Arabỉs original text runs as follows: "Some of the saints take prophethood as a legacy of the Prophet, and they are either Companions who witnessed him, or those who saw him in a dream." ${ }^{27}$

The Companions are the first generation Muslims who met the Prophet Muhammad, and they are the most respected Muslims in Sunnī Islam. Most of them did not accept 'Alī's leadership as imam immediately after Muḥammad's death. Therefore, Shīí Islam considers most of them unreliable in religious matters. It is natural that Mullā Ṣadrā, a Shīī thinker, erased the word "Companions" (sahāba) in the original text and inserted "People of the Household" in its place.

Mullā Ṣadrā basically accepts Ibn ‘Arabỉ's mystical framework of sainthood, though Ibn 'Arabī's idea, in its original form, does not relate to the Shī̄̄̄ concept of imām. Mullā Ṣadrā adapted Ibn 'Arabī's text to his own Shī' way of thinking when he incorporated it into his work. Specifically, he changed Ibn 'Arabī's reference to saints (in mysticism) to Shici imams; he omitted the connotation of mujtahid as Sunnī legal authority, and indirectly subscribed to the Shī'i concept of mujtahid; and he inserted a Shīī concept "People of the Household" in place of the Sunni "Companions." In this way Mullā Ṣadrā transformed Ibn 'Arabī’s mysticism into Shī'ī mystical thought.

## Conclusion

It is well known that Mullā Ṣadräs thought is much indebted to the mystical intuition of the Oneness of Being (wahdat al-wujūd) of Ibn 'Arabī, with whom Ibn Sīnā and the Shaykh al-Ishrāq al-Suhrawardī should also be mentioned. As an aspect of his indebtedness to his preceding thinkers, Mullā Ṣadrā incorporates or quotes in his works various texts of the forerunners of Islamic thought, with or without mentioning names. ${ }^{28}$ The present study, which takes a short section of his Shawāhid as an example to show how Mullā Ṣadrā modified Ibn 'Arabỉ's text to his own understanding, can help us better understand Mullā Ṣadrä’s text with Ibn ‘Arabỉ's original in the background. When we study Mullā Ṣadrās thought, we should pay more attention to the texts which Mullā Ṣadrā incorporates in his works often without mentioning the names of their original authors, in order to understand his thought better and more correctly.

28 For example, Mullā Ṣadräs treatise, Iksīr al-ārifín, relies heavily on Bābā Afḍal Kāshānỉs Jāwidānnāma. See William C. Chittick's introduction xvii-xix in Mullā Ṣadrā, The Elixir of the Gnostics (Provo, UT: Brigham Young University Press, 2003).

# "Substantial Motion" and "New Creation" in <br> Comparative Context 

Yanis Eshots

One of the earliest definitions of motion in Islamic philosophy belongs to al-Kindi: "Motion is a change of the state of the essence" (al-haraka tabaddul hāal al-dhāt). ${ }^{1}$ This definition, however, provokes more questions than it answers. What exactly is 'state'? Does the change of state necessitate the change of essence? If yes, in which way?

The problem of motion received a more substantial treatment in the works of Ibn Sīnā, who wrote in the Najāt: "[The word] 'motion' is employed to describe (1) a gradual change of a stable state in the body, in such a manner that through this change the body directs itself towards something and (2) the arrival through this change at this thing." ${ }^{2}$

He adds that motion must manifest itself as leaving the previous state and that this state must be capable of decreasing and increasing, because that from which the body gradually emerges, as it directs itself toward something [different], remains, in such a way that its remaining does not contradict [the body's] emergence from it-otherwise, this emergence would be an instantaneous affair, not a gradual one. Then, Ibn Sīnā continues, the state of such a body is either similar in every moment of this emergence, or not. But it cannot be similar, because, if it had been similar, then its emergence would not have occurred, since everything, the emergence of which occurs gradually, remains, without being similar in itself in respect of its state, during its emergence from this state. Such a thing, inevitably, allows increase and decrease.

Among the states that experience motion Ibn Sīnā names whiteness and blackness, heat and cold, length and shortness, nearness and

[^42]distance, greatness and smallness in volume. ${ }^{3}$ Following Aristotle, he describes motion as act $\left(f_{i}{ }^{c}\right)$ and the first perfection of the thing in potentiality, in that aspect in which it is in potentiality: "Motion is what is conceived from the state of the body, due to its gradual coming out of stable form (hay ${ }^{3}$ ), and it is coming out of potentiality into actuality in a continuous manner, not instantaneously." ${ }^{4}$

As is well known, Aristotle and Ibn Sīnā limited motion to four of ten categories-namely to place (or "where") ( $\pi 0 v^{\prime} /$ ' $a y n$ ), position ( $\kappa \varepsilon i \sigma \theta \alpha \iota / w a d^{c}$ ), quality ( $\pi \circ \iota o ́ v /$ kayf), and quantity ( $\pi 0 \sigma o v /$ kamm). ${ }^{5}$ Regarding substance (ov́ ${ }^{\prime} \alpha /$ jawhar), Ibn Sīnā’s view was that it does not experience motion. Although engendering (kawn) and corruption (fasād) of substance outwardly resemble motion, in fact they cannot be regarded as such, because, according to Ibn Sinā, they occur instantaneously, not gradually. ${ }^{6}$

In the philosophy of Mullā Ṣadrā, the (existence of) substantial motion is an undeniable and self-evident truth (the veracity of which Sadrā demonstrates in many ways). Perhaps only the principle of the analogical gradation of existence (tashkīk al-wujūd) can be regarded as more significant and entailing more important consequences than the principle of substantial motion (but, in fact, both are intertwined and inseparable from each other). In order to understand what Ṣadrā meant by "substantial motion" and why he was so firmly convinced of its existence, we need to examine his concept of motion first, finding out how it differs from that of Ibn Sīnā.

Şadrā describes motion as "a flowing state, whose existence is between pure potentiality and pure act and whose concomitant is a finite gradual continuous affair which has no existence that is described with presence and all-comprehensiveness (jam'iyya) elsewhere except in the estimative faculty (wahm)."7 This definition, in fact, represents a combination of two Avicennan definitions of motion, each of which deals with the latter in a different aspect. In the first definition, Ibn Sīnā describes motion as "a continuous intelligible

[^43]affair of the object, moving from the place of the beginning [of the movement] to the place of its end." ${ }^{8}$ This definition deals with the continuous (qat ${ }^{t}$ iyya) movement, which exists only in our mind (dhihn) or estimative faculty (wahm), but is not found in the outside, "among the entities" (fil-acyān). Notice that Ṣadrā treats it as the concomitant of the real motion that exists in the outer world.

The second definition describes motion as
an existential affair [that exists] in the outside and which consists in the body's being in an intermediate position between the place of the beginning [of its movement] and the place of its end, so that, whichever point between these two is taken, its [the body's] "before" and "after" is not in it [the supposed point]. This state lasts as long as the thing continues to be moving. ${ }^{9}$
This is the definition of the "instantaneous movement" (al-haraka al-tawassutiyya), i.e., the movement as it is perceived by our sense faculties. Ṣadrā describes it as a "flowing state" (hāla sayyāla) between potentiality and actuality. Despite his criticisms of the above quoted Avicennan definitions ${ }^{10}$ (which result from Sadräs extreme existentialist position and his denying any reality to quiddity), one cannot fail to notice that he develops his teaching on movement on the basis of Ibn Sinäs doctrine. In other words, Sadrā treats an instantaneous movement, understood as a flowing affair, as a reality that exists in the outside, while he views the continuous one as a concomitant of the former, which exists only in the estimative faculty-i.e., he sees the continuous movement as a shadow of the instantaneous one.

However, if we consider movement as the mobility of a thing (mutaharrikkiyyat al-shay ${ }^{2}$ ), it is nothing but self-renewal (tajaddud) and passing (inqid $\bar{a}$ ). Its proximate cause (al-cilla al-qariba), by necessity, must also be an affair which is not stable in its essenceotherwise, the parts of movement would not become non-existent. Or perhaps it is more appropriate to say that motion is an essential concomitant of the existence of this affair, which is fixed in its

[^44]quiddity and self-renewing in its existence-and, if it is so, it is more suitable to focus our attention on the accompanied ( $\operatorname{malz} \bar{u} m$ ), not on the accompanying (läzim). The accompanied affair, whose concomitant is motion, is, of course, nature ( $\left.\operatorname{tab} \bar{i}^{〔} a\right)$.

The proximate cause of every species of motion is nature, and it is the substance which constitutes the body and through which the body is actualized as a species, and it [and not motion] is the first perfection of the natural body in the aspect of its actual existence. Hence, it is established and verified that every body is an affair which is self-renewing in its existence and flowing in its ipseity (huwiyya), although it is fixed in its quiddity, and through this, it differs from motion, because the meaning of the latter is self-renewal and passing. ${ }^{11}$

In other words, there is no such a thing as a stable body, as far as existence is considered. On the contrary, every body should be considered as a particular aspect of the flow of existence-an aspect whose apparent stability results from an error of our sense perception. Motion is not external to such a body and is not predicated to it from outside. Rather, this is a certain quiddity which is predicated on this or that aspect or level of existence.

The principles of Peripatetic philosophy require an unchanging substratum for every change. In Ṣadrian philosophy, in which the body is viewed as an existentially self-renewing and perpetually flowing affair, it apparently cannot serve as such substratum. Șadrā solves the arising difficulty by stating that the requirement for the stability of the substratum applies only to those motions which are not existential concomitants of nature (for example, passage from one place to another, transmutation, and growth). As Țabātabāāī remarks in his gloss, this assertion, in fact, testifies that Ṣadrā believes that all categories move through the movement of the substance which is their substratum. Tabātabā̄ī also notes that non-concomitant movements, which occur in the categories of place, position, quality, and quantity, do not rely on the nature of the moving substance as such, but, nevertheless, the furthest limits of these non-concomitant movements are the concomitant ones that directly depend on the nature of their substratum. ${ }^{12}$

[^45]Another difficulty concerning the substratum of movement lies in the fact that, according to Aristotle and Ibn Sīnā, it consists of something potential and something actual. S adräs answer to them is that the postulate of the existence of two different affairs, one of which is potential and another actual, is a product of mental analysis ( $\left.\operatorname{tah} h \bar{l} l^{\prime} a q \bar{l}\right)$, while in reality the potential and the actual is one and the same thing and belongs to one existential direction. The fixity ( $t h u b \bar{u} t$ ) of movement manifests itself as its self-renewal, and, likewise, the fixity of that through which movement occurs, that is, nature which is engendered in the bodies, manifests itself as its essential self-renewal. But what is the mechanism of this fixity and self-renewal? According to Ṣadrā, it is based on the possibility of preparedness (imkān istic $\bar{d} \bar{d} d \bar{\imath})$, and the self-renewal of nature manifests itself as "dressing after dressing" (al-labs bacd al-labs). As Fazlur Rahman justly remarks, the self-renewal is perceived by Ṣadrā as an "essentially evolutionary and unidirectional individual process-entity." ${ }^{13}$

To understand this properly, we must keep in mind that the reality of prime matter is nothing other than potentiality and preparedness, while the reality of form is nature with its self-renewing temporal origination. Through its evolving preparedness, the prime matter receives a new form in every instant, each form having a different matter, which accompanies it by necessity. In turn, this matter is prepared to receive another form, different from that which necessitated it (matter) through preparedness. Thus we find that form is prior to matter in essence, but its (the form's) individual ipseity is posterior to matter in time. Hence, both form and matter possess self-renewal and perpetuity through the other. The popular belief that the form of a non-compound body remains forever the same and does not undergo any change arises from the similarity of the changing forms. In actual fact, however, these forms are one by their philosophical definition (hadd) and meaning, but they are not one in number, because they are renewed and replaced with each other in every instant, in a continuous manner. ${ }^{14}$ This made Ṭabātabāī conclude that Ṣadrā saw existence as a single continuous flowing affair, from which hypothetical limitations (i.e., the

[^46]intelligible quiddities-e.g., those of man, animal, plant, etc.) are abstracted by the mind. ${ }^{15}$

There is a single continuous (or: uninterrupted) individual existence, which has infinite limitations in potential in respect to instants, hypothesized in its time, and [therefore,] in it exist an infinite number of species-in potentia and in meaning, not in actu and in [actual] existence. ${ }^{16}$

The difficulty with the apparent lack of an unchanging and persisting substratum (mawd $\bar{u} \subset$ ) in substantial motion to which Ibn Sīnā pointed, is easily resolved if we agree to treat substance not as a static affair, but as a dynamic one and as an individual process. ${ }^{17}$

Although it is necessary that the substratum of every movement subsist through its existence and individuation, in the individuation of a corporeal substratum, it is sufficient that there is matter which is individuated through the existence of some [sort of] form, quality, and quantity, and it [matter] can change in respect to the particularities of each of them [i.e., form, quiddity, and quantity]. ${ }^{18}$

In other words, the subsistence of the substratum is achieved through the existence of matter and some indeterminate form, quality, and quantity. As Fazlur Rahman observes, this indeterminate form, quality, and quantity behave vis-à-vis the progressively emerging infinity of determinate forms, qualities, and quantities "as a genus does vis-à-vis concrete species." ${ }^{19}$ Hence, the persisting substratum is an unbound/non-delimited body (jism mutlaq), i.e., a body-in-general, not a particular body, while the unity of the moving substance is one of the process-entity or the event-structure. ${ }^{20}$

On the other hand, as Țabāṭabāì remarks, if the movement lacks the unity of continuity, the subsistence of substratum alone does not provide the unity of movement. Moreover, according to Țabātabā̄ī, while the subsistence of substratum is a necessary precondition of the accidental movements (such as the movements in quality, quantity, position, and place), because they are accidents, whose existence is only possible in substratum and whose individuation takes place

[^47]through it, this is not the case with the material substance, which exists through itself and, in its individual unity, does not require anything else apart from its own existence, which is simultaneously its individuation.

The material substance, says Tabātābā̄ī, insofar as it is considered the possessor of substantial motion, is both the movement and the moving one, because its selfhood, which is movement, is attributed to its selfhood which is substance. In sum, accidental movements in respect of their unity and individuality require a substantial substratum, a possessor of unity and individuality, as a root and basis of their flowing unity and individuality. ${ }^{21}$ While accidents need substance as their substratum and cannot exist without it, the substance in a substratum has no need for other than itself. Since Ṣadrā views every corporeal and psychic substance as an evolutionary and unidirectional process, its actual substratum is nothing other than the continuity of this process. ${ }^{22}$

Does Ṣadrä's theory of substantial motion, as gradual and evolutionary unidirectional movement toward perfection, constitute a revolutionary new teaching in the context of Islamic philosophy? By no means-the idea, probably stemming from the Neoplatonic concepts of processio and reditus, found its expression in the wellknown teaching of scala naturae, which was equally popular in medieval Europe and the medieval Muslim East. ${ }^{23}$ The uninterrupted chain of being, which ascends from the lowest and simplest to the highest and most complex creatures, was viewed as the product of gradual emanation and natural growth of things in perfection. Among the first Muslim philosophers to discuss the issue in their treatises in detail were the Ikhwān al-Ṣafā (Brethren of Purity). Thus, they wrote:

Know, O brother, that the sublunary beings begin from the most imperfect and lowest states and then ascend towards the most perfect and eminent state. This occurs with the passage of time and with every instant, since their nature does not receive the emanation from the

[^48]spherical forms at one single time, but gradually, one thing after another. ${ }^{24}$
Sadräs merit lies in discussing this Neoplatonic theory in terms of Peripatetic philosophy and in overcoming the resistance of the latter by interpreting material substance as a continuous flow and evolutionary process, instead of viewing it as a static and unchangeable entity. While the Ikhwān al-Șafā` focused their attention on the universal chain of being, Ṣadrä’s main concern was with a particular corporeal or psychic substance. It was not mineral becoming plant and plant developing into animal that concerned Ṣadrā, but body becoming soul and soul becoming intellect, this world growing into the other (the hereafter) and the transformation of the first (corporeal) configuration (al-nash'a al-ülà) into the other (spiritual) one (al-nash'a al-ukhra). This is primarily an eschatological concern: this-worldly life, events, phenomena are regarded by Ṣadrā as (a) preparatory stage(s) and shadow(s) of the other-worldly one(s).

In the world of nature all substances are subject to substantial motion, because the existence of a material substance, regardless of the corruptibility (in the case of elemental bodies) or the incorruptibility (in the case of celestial bodies) of its matter, can only be envisaged as an unidirectional evolutionary process-or, more precisely, in respect to its existence, every material substance is an individualized unidirectional evolutionary process. During its development, this substance becomes subject to an infinite number of changes and alterations-"dressing after dressing," which means that, in order to assume a new and higher form, it does not need to take off the previous lower one (e.g., in order to assume the form of the animal soul, the substance does not need to abandon and take off the form of the vegetative soul). Quite the opposite, in order to be able to receive a higher form, the substance must first receive the lower one (thus, in order to be able to receive the form of the animal soul, the respective substance must first receive that of the vegetative soul). Sadrā calls this rule (the principle of) "the lower

[^49]possibility" (al-imkān al-akhasss) (which is to be understood as the necessity to previously actualize the lower possibility in order to allow the actualization of the higher one) and, in the ascending arc of being, places it opposite the well-known Peripatetic rule of "the higher possibility" (al-imkān al-ashraf), according to which the actualization of the lower possibility is only possible through and after the actualization of the higher one in the descending arc. More importantly, the existence of the natural body is only possible and can only be conceived of as substantial motion and stability in flow. The particular evolutionary path taken by a certain aspect of the flow of material existence (thought of in terms of substantial motion) is determined by its particular principle, referred to as its "nature" ( $\left.\operatorname{tab}^{-} a\right)$. This particular principle or nature of the body is, in fact, nothing but tenuity (raqiqqa) that links the reality (haqīqa) or immaterial archetype of the thing with its material idols. Although nature is the proximate cause of substantial motion, the ultimate goal of the latter is to bring the substance out of the world of nature, and place it among the inhabitants of the world of command, that is, increase the intensity of its existence to a level sufficient to make it possible for it to exist as pure disengaged dominating light ( $n \bar{u} r$ mujarrad qähir), or Intellect.

Sadräs theory of substantial motion can now be compared with Ibn 'Arabī's teaching on new creation (khalq jadīd). During the twentieth century it became almost commonplace for experts in Islamic philosophy to believe that Șadräs theory represents nothing other than a philosophical demonstration of Ibn 'Arabỉs teaching on new creation. (Ṣadrā himself was partially responsible for the spread and strengthening of the belief, since in his discourses on substantial motion he employed the expression khalq jadid a number of times). ${ }^{25}$ Here, I ask, is it really so? Or is Ṣadrä's usage of the aforementioned Qurānic and Sufi term merely a rhetorical technique, designed to capture the attention of the audience and to intrigue them? Before I try to answer these questions, I first briefly examine the concept of new creation and its history.

As Ibn 'Arabī himself acknowledges, his idea of the perpetual renewal of creation was, at least partially, inspired by the Ash'arī teaching on substances and accidents. As is well known, the Ash'arī

See, for example, Ṣadrā, Asrār, 63, 86.
believed that the world consists of immutable substances and ever changing accidents. Their famous axiom was "accidents do not remain for two moments" (al-aç räd lā tabqā zamānayn). While the Ash'arī viewed substance as the underlying substratum of accidents, they held that the substances of which the world consists have no independent existence in themselves, but wholly depend on God's power, which continually recreates the world in every instant (needless to say, such an understanding of substance (jawhar) makes it practically synonymous with atoms (al-jawhar al-fard, literally-"an indivisible particle"). ${ }^{26}$ In the twelfth chapter of the Fussus, which contains one of the most important discussions on khalq jadid, Ibn 'Arabī admits that two groups-the Ash'arī and the Relativists (hisbāniyya) - in their reasoning approach an understanding of the mystery of perpetual creation, but, he states, both fail to penetrate its heart and core. As for the Ash'arī, they have grasped the perpetual renewal of some of the existents, namely the accidents, but they have not realized that the world in its entirety represents nothing other than the totality ( $m a j m \bar{u} c$ ) of accidents, for which reason it entirely changes in every moment. In turn, the Relativists apprehend that the world perpetually changes in its entirety, but fail to notice the oneness of the entity of the substance which receives the form of the world and which only exists through it (whereas the form also cannot be conceived other than through this substance). ${ }^{27}$

Importantly, in this discussion Ibn 'Arabi defines the new creation as the "self-renewal of the affair with every breath" (tajdid al-amr máa al-anfās), ${ }^{28}$ which (self-renewal) is necessitated by the fact that "God manifests Himself [anew] in every breath" ${ }^{29}$ and "a [particular] self-disclosure is never repeated." ${ }^{30}$ (However, Ibn 'Arabī's commentator Mu’ayyad al-Dīn al-Jandī remarks that God's essential self-disclosure is one and eternal, and, if considered without any relation, never changes in any way. The perpetual change and alteration of the self-disclosures of the Real witnessed by (certain

[^50]strata of) mystics are occasioned by the change of the preparedness of the receptacles). ${ }^{31}$

One notices that each a new creation is necessitated by and depends on a new breath. These breaths represent fragments or instances of the all-encompassing Breath of the Merciful (nafas al-Rahmann). It seems not unreasonable to assume that perpetual origination, in a way, results from the fragmentation of the Breath of the Merciful in respect to its particular receptacles, which, due to their limitations and difference in preparedness, cannot receive this all-encompassing breath in its entirety at one time, but are only able to do this gradually, dividing it in different directions and aspects according to the division that exists between God's names. Hence, in the same way as no human being, due to the narrowness of his breast, can partake of the Breath of the Merciful, except through a series of subsequent breaths, our mystical intuition cannot conceive of creation other than as an (infinite) chain of self-disclosures, every link of which simultaneously marks the appearance of a new form and the disappearance of the previous one. Thus, the teaching of new creation in Ibn 'Arabī's thought deals mainly with the relationship between the limited existence and the unlimited one.

Due to its confinement in time and space, the material universe is also confined in meaning-or probably the actual case is vice versa: its limitation in meaning manifests itself as spatial and temporal limitation(s). The narrowness of the receptacle, thus, makes the act of the Real actualized gradually, step by step, instant after instant (breath after breath), creation after creation. (Ṣadrā would certainly say that this narrowness and confinement results from the weakness / lowness of the intensity of the natural existence-or that at its lower degrees of intensity existence manifests itself as natural, i.e., as an existence that is confined in time and space and cannot simultaneously assume more than one particular form.)

A number of passages found in the Futūhāt testify that the perpetual new creation of the world is necessitated by the narrowness of the receptacle. However, to Ibn 'Arabī, this receptacle is existence (=finding) itself:

[^51]Within the Treasuries are found the individuals of genera. These individuals are infinite, and that which is infinite does not enter into existence, since everything confined by existence is finite. ${ }^{32}$
The possible things are infinite, and there cannot be more than the infinite. But the infinite does not enter into existence at once (dafcatan); rather it enters little by little, without an end. ${ }^{33}$
But, upon a more careful examination of the above quotations, one realizes that what the Greatest Shaykh understands here by existence is the external and natural existence.

Furthermore, one notices that, to Ibn ' $A r a b \overline{1}$, new creation is not a unidirectional and evolutionary process-i.e., the subsequent form is not necessarily more perfect in any aspect than the previous one. Also, in new creation, through assuming a new form, the (material) existence unclothes itself of the earlier one, whereby the process must be described as "dressing after undressing" (al-labs ba'd al-khal'), not as "dressing after dressing" (al-labs ba'd al-labs), as is the case with substantial motion. Ibn 'Arabī is overwhelmed by the vision of the perpetual renewal of the world, which can probably be characterized as the attempt of the finite to grasp the infinite and the attempt of the limited to grip the unlimited-a task that can never be completed. Ṣadrā, in turn, envisages the material world as a flowing substance which, in every part and every instant, moves one-albeit an immeasurably small-step closer toward spirituality and perfection.

The new creation, as it is understood by Ibn 'Arabī, i.e., the limited's attempt to express and manifest the unlimited, takes place in keeping with a certain regular pattern (likeness is normally replaced with likeness, not opposite with opposite) that is cyclically repeated and recreated. For this reason, it can be described as a cyclical event and presented graphically as circular motion.

In turn, substantial motion as envisaged by Ṣadrā, i.e., as a unidirectional evolutionary process and gradual spiritualization of

[^52]material existence, occurs due to the increase of the latter's intensity, can be graphically presented as a half of the circle, i.e., as its ascending arc. What happens to the moving substance once it has reached the summit of the arc? According to Sadrā, it remains with the Godhead, becoming existentially one with its noetic archetype (the respective dominating light).

This difference in approaches results from a more principal difference between the visions of the two thinkers. For Ibn 'Arabī, existence is an accident of the entity, eternally fixed in the knowledge of the Real, the presence or absence of which does not in any way change the quiddity/whatness of the respective entity and its status in God's mind; to Șadrā, there is no such thing as an externally non-existent entity, eternally present in God's mind. Rather, the existence is the only thing which is/exists, whereas quiddities are nothing other than its potential limitations, which do not really exist, but are abstracted by the mind from the perpetual flow of (one and the same) existence and its different aspects.

The substantial motion, in brief, comes down to the increase of the intensity of the thing's (i.e., the essence's) existence. That is to say, an affair (e.g., the human soul), which begins to exist as an entirely corporeal thing, gradually comes to experience, first, imaginalization (takhayyul) and, subsequently, intellectualization (ta'aqqul). Although Ibn 'Arabỉ's teaching on the "new creation" (as numerous references to the latter, found in Ṣadrä's works, seem to suggest) is likely to have been one of the principal sources of Sadrä’s inspiration for proposing the theory of substantial motion, he appears to have missed the focal point of Ibn 'Arabī's doctrine. Ibn 'Arabi defines the "new creation" (or: "new measuring out") (khalq jadidd) as "the renewal of the affair with every breath" (tajdīd al-amr máal-anfās $)^{34}$ or "the change of the world with every breath [occurring] in one entity."35 This renewal or change results from the difference of the relations of $w u j \bar{u} d$ in respect to each possible thing in every instant ${ }^{36}$ and is based on the mystical intuition that perceives the world (cosmos, 'ālam) as the Real's imagination (khayāl). Though Ibn 'Arabi sometimes refers to the process of new

34 Ibn al-'Arabī, Fuṣūṣ, part 1, 125.
35 Ibid.
36 See ‘Abd al-Razzāq al-Kāshānī, Isțilāhat al-ṣūfiyya, ed. M. Hādīzāde (Tehrān: Intishārāt-i Ḥikmat ${ }^{3381 S h}$ ), 133 .
creation (as perceived by a particular mystic) as taraqqī ('advancing, developing'), ${ }^{37}$ this advancing is not to be interpreted as advancing toward and achieving a certain final and ultimate perfection, e.g., a child becoming adult or a minor clerk's becoming the director of a company. Rather, this is an imaginal advancing-the kind of advancing that we experience in dreams (and, therefore, it is called by Ibn 'Arabī taraqqī ba'd al-mawt, 'advancing after the death'), ${ }^{38}$ and is not unlike the Real's advancing from task to task. ${ }^{39}$

Şadräs" "substantial motion," in turn, is a finite unidirectional evolutionary affair. Upon attaining the desired perfection (be it physical or psychic-as we know, according to Șadrā, there is no haraka jawhariyya in the world of intellect, because intellect is a fully perfected soul), it ceases. Therefore, substantial motion (also referred to by Ṣadrā as the increase of the intensity ("strengthening") of the thing's existence (tashdìd al-wujūd) must be understood as the gradual return of the instance to its archetype (lord of species). The expressions haraka jawhariyya, tashdìd al-wujūd, and tajawhur ('substantialization'), thus, are all used by Ṣadrā to describe the process of the thing's gradual return to its root and principle (assl).

Both concepts-"new creation" and "substantial motion"-are employed by their creators to describe certain journeys toward perfection. However, in each case, this journey appears to be of an entirely different character. While Ibn 'Arabī has in mind an infinite journey in the realm of (the cosmic) imagination, Ṣadrā is concerned with the finite journey of a physical and psychic instance to its intelligible archetype.

[^53]
# MULLĀ ṢADRĀ ON ESCHATOLOGY IN 

 AL-ḤIKMA AL-ARSHĪYYAZailan Moris

The Asfār or al-Hikma al-mutáāliyya fi al-asfār al-'aqliyya al-arba'a [The transcendent wisdom concerning the four intellectual journeys of the soul] which extends over a thousand pages in Arabic, is Mullā Ṣadräs magisterial work. The Asfär is a compendium of nine hundred years of Islamic learning; ${ }^{1}$ it discusses in great detail and depth the intellectual journey of the human soul in quest of true and certain knowledge to transform it from an ignorant and carnal soul "inciting to evil" and dwelling in darkness to an enlightened and perfected soul "at peace." ${ }^{2}$ The Asfär is Mullā Ṣadrä’s definitive philosophical work that demonstrates his particular perspective, style, and unique manner of approaching philosophy. Mullā Ṣadrā also wrote several comprehensive philosophical texts which can be regarded as abridgements and summaries of the Asfär. Although these comprehensive texts have different emphases depending on their individual foci, they each provide the reader with an overview of Mullā Șadrä’s transcendent philosophy or al-hikma al-mutáāliyya. ${ }^{3}$ Mullā Ṣadrā’s philosophy deals essentially with knowledge of the origin (al-mabdac) and of the return ( $a l-m a^{\top} a \bar{d} d$ ), or the knowledge of being and becoming and knowledge of the soul and its ultimate destiny. These comprehensive philosophical texts that condense the materials in the Asfär all share

[^54]the same intention: to guide the reader to the highest understanding of metaphysics (ilähiyyāt) and eschatology (al-máād).

Al-Hikma al-'Arshiyya ${ }^{4}$ is one such philosophical text. Extending to approximately eighty pages in Arabic, it has been ably translated into English by James W. Morris as The Wisdom of the Throne: An Introduction to the Philosophy of Mulla Sadra. In the Prologue to the 'Arshīyya, Mullā Ṣadrā states that this text, dealing with two of the "noblest of the true forms of knowledge through which man can become part of the host of 'angels drawn near to God",' is written as a guide for "discerning travelers" (al-sulläk al-nazirin) on the spiritual path. ${ }^{5}$ The 'Arshiyya is divided into two major parts, termed "places of illumination" (mashriq). The first part, or "place of illumination," deals with "knowledge (al-'ilm) of God, His attributes (al-sifat), His names (al-asmā $)$ and His signs (al-āyāt)," and it contains sixteen principles ( $q a w \bar{a} \subset i d$ ). The second "place of illumination" is subdivided into three sections or "illuminations". The first "illumination" deals with "the true inner meaning of the soul (ma'rifat al-nafs)," the second with "the true reality of the return (haqiqqat al-ma'ād) and the manner of resurrection of the body (hashr al-jasad)," and the third with "the states (ahwāl) that occur in the other world (al-äkhira)." The first "illumination" contains eleven principles, the second has five principles, and the third has seventeen principles.

## Eschatology (al-Māād)

Mullā Ṣadrā begins his discussion on eschatology, which constitutes the second part of the 'Arshīyya or the "second place of illumination," with a discussion of the knowledge of the soul (márifat al-nafs). Here it is important to note that Mullā Ṣadrā uses the term márifawhich signifies inner experiential knowledge obtained by means

4 Al-Hikma al-arshiyya means 'wisdom from the divine throne'. The term 'arsh is used in the Qur āa to refer to the divine Throne. In Islamic cosmology al-arsh is used as a symbol to delineate the boundary between the created order and the divine order. For a study of al-hikma al-arshiyya, see Zailan Moris, Revelation, Intellectual Intuition and Reason in the Philosophy of Mulla Sadra: An Analysis of the al-Hikmah al-Arshiyyah (London and New York: RoutledgeCurzon, 2003).
5 Şadr al-Dīn Shīrāzī, al-Hikmah al-Arshīyya (Isfahan: Shahriyar Books, 1342/1962), 219. James W. Morris, The Wisdom of the Throne: An Introduction to the Philosophy of Mulla Sadra (Princeton, NJ: Princeton University Press, 1981), 92. Translations throughout are based on Morris' translation, with slight modifications by the author, citations are to both texts.
of intellectual illumination and intuition-rather than the term 'ilm, which means knowledge in general and when juxtaposed to $m a^{\prime} r i f a$ denotes a form of knowledge acquired through formal learning and discursive thought. The early Islamic philosophers, such as al-Färābī and Ibn Sīnā, employed the term 'ilm al-nafs to indicate the knowledge or science of the soul and treated it as a part of natural philosophy or physics (tabīivyät). ${ }^{6}$ The term márifat al-nafs came to be used in the later history of Islamic philosophy to distinguish a presential knowledge (al- - ilm al-hudū $r \bar{i}$ ) of the soul, from acquired knowledge (al-ilm al-husūuli) of it. Unlike earlier philosophers, Mullā Ṣadrā treats the science of the soul as a part of eschatology (al-máād), since it is the soul that will experience the return and the various eschatological events described in the Qurān and Hadith. Therefore, the differences in the terms employed for the science of the soul relate to the different sources of knowledge of the soul and their treatments reflecting their differing philosophic and experiential perspectives.

## Knowledge of the Soul

In the first principle of the "first illumination" (ishrāq al-awwal) on "the inner knowledge of the soul," Mullā Ṣadrā explains the necessity for illumination to attain esoteric knowledge of the soul. He considers esoteric knowledge of the soul as "one of the extremely difficult fields of knowledge" that cannot be attained merely by discursive thought and philosophical investigation alone. In the 'Arshīyya Mullā Ṣadrā states:

Know that the inner knowledge of the soul is one of those extremely difficult (fields of) knowledge in which the philosophers were exceedingly neglectful, despite the length of their investigations, the power of their thought and the frequency of their endeavors in this field. For this knowledge can only be acquired from illuminations drawn from (iqtibas) the lamp-niche of prophecy (mishkāt al-nubuwwa) and by following the lights of revelation and the divine message (anwār al-wahī wa-l-risāla) and the lanterns of the sacred book (maṣäbîh al-kitāb) and the tradition (sunna) that has

[^55]come down to us in the path of our Imams, masters of guidance and infallibility, from their ancestor the Seal of the Prophets. . . ${ }^{7}$
By using the terms mishkāt (lamp-niche) and maṣābīh (lanterns), Mullā Ṣadrā makes explicit references to the famous 'Light Verse' in the Qur'an (Q. 24:35). ${ }^{8}$ For Mullā S Sadrā, the Prophet or prophecy is the "lamp-niche" (mishkāt) illuminated by the "lantern" or "lamp" (miṣbāh) which is the Qur'ān. By receiving revelation, the Prophet was illuminated with knowledge. Similarly, those who assent and have faith in the veracity and guidance of the Qur'ān, Muhammad's prophethood, and the infallibility of the Imams on religious matters, ${ }^{9}$ may also attain true and certain knowledge such as that concerning the nature of the soul, and thereby receive illumination.

## Nature of the Soul

Having asserted the necessity of accepting revelation and prophecy for attaining esoteric knowledge of the soul, Mullā Ṣadrā then gives a philosophical exposition of the nature of the soul. According to Mullā Șadrā, the soul, from its origination to the end of its goal, has many levels (darajāt) and stations (maqāmāt). In the beginning, the soul is connected with the body and is a corporeal substance (jawhar

7 'Arshīya, 234; Wisdom of the Throne, 131.
8 Allah is the Light of the heavens and the earth. The similitude of His Light is as a niche (mishkāt), wherein is a lamp (miṣbāh). The lamp is in a glass. The glass is as it were a shining star. (This lamp is) kindled from a blessed tree, an olive neither of the East nor of the West, whose oil would almost glow forth (of itself) though no fire touched it. Light upon light, Allah guides to His light whom He will. And Allah speaks to mankind in allegories, for Allah is Knower of all things (Q. 24:35).

9 In Shîi theology, the "cycle of prophecy" (da'irat al-nubuwwa), which comes to an end with the Prophet Muhammad who is the "Seal of the Prophets" (khatm al-anbiyä), is succeeded by the "cycle of initiation" (daiirat al-walāya). Waläya, which means "dominion," "friendship," and "protection" refers to the esoteric aspect of prophecy, which is an eternal prophecy, unlike the legislative aspect of prophecy, which comes to an end with the Prophet Muhammad. In Shíci Islam, prophecy (nubuwwa) is succeeded by the Imamate (walāya); both the prophets and the Imams are the Friends or Beloved of Allah (awliyāa Alläh) who are guided by God and protected from error ( $m a^{c} s \bar{u} m$ ) on religious and spiritual matters. For a detailed treatment on this subject, see Henry Corbin, History of Islamic Philosophy, trans. L. Sherrard (London: Kegan Paul, 1993), 25-30.
jismānī). However, through the process known as 'transubstantial motion' (al-harakat al-jawhariyya) the soul becomes gradually crystallized or intensified (ishtidād) and its mode (tawr) of existence, or being, is likewise transformed until it is abstracted from the body or attains its independence (tajrīd), finally subsisting as spirit, at which point, it "returns to its Lord" (Q. 89:27). As summarized by Mullā Sadrā, the soul originates as body but subsists as spirit: "jismāniyyat al-hudūth rūhaniyyat al-baqā$\vec{a}$." ${ }^{10}$

Mullā Ṣadrā delineates the various stages of the development of the human soul from the vegetative soul (al-nafs al-nabatiyya) to the animal soul (al-nafs al-hayawäniyya) and then the rational soul (al-nafs al-nätiqa) with its practical intellect (al-'aql al-'amalī) and theoretical intellect (al-aql al-nazarī); the subsequent stages of development of the theoretical intellect from the intellect-inpotentiality (al-‘aql bi-l-quwwa) to the intellect-in-actuality (al-aql $b i-l-f i c$ ), finally attaining union with the Active Intellect (al- $a q l$ al-facāl). ${ }^{11}$ Mullā Șadrä’s delineation of the various developmental stages and faculties of the human soul is similar to teachings by Ibn Sīnā. Mullā Ṣadrā identifies the Active Intellect with the Holy Spirit (al-rūh al-qudus), or the Archangel Gabriel, who is the angel of revelation in Islamic tradition. In contrast to the Mashshā̄̄ (Peripatetic) philosophers, but in agreement with the Sufis, Mullā Ṣadrā considers human effort and labor alone insufficient to attain this highest station of unity with the Active Intellect. There is a need for divine aid and grace for the attainment of intellectual and spiritual perfection, as testified by a prophetic hadīth cited by Mullā Șadrā: "A single attraction ( $j a d h b$ ) from the Real (al-Haqq) outweighs all the effort of men and jinn." ${ }^{12}$

In the 'Arshīyya Mullā Ṣadrā states that human souls that have become fully actualized are very few in number. The vast majority of individual human souls are imperfect and have not attained the rank of 'intellect-in-actuality' when they become united with the Active Intellect. Nevertheless, the fact that these human souls have not attained the highest state of intellectual perfection does not mean that they will perish or are annihilated after death, as taught by

[^56]Aristotle and his Neoplatonic commentator Alexander Aphrodisias, whose works were well-known among the Muslims. ${ }^{13}$

Unlike Ibn Rushd, who agreed with Aristotle and Alexander Aphrodisias and considered only the intellect in man to be immortal and therefore the only part of the human soul that becomes actualized in the intelligible world and survives death, Mullā Ṣadrā viewed the individual human soul as immortal, as did Ibn Sīnā. In Mullā Șadrä's perspective, denial of the immortality of the individual human soul is contrary to the Islamic eschatological belief that explicitly states that every soul will be justly requited with what it has earned in this world.

According to Mullā Ṣadrā, the view of Alexander Aphrodisias is based on the supposition that there exist only two kinds of worlds: the sensible world of material bodies and the immaterial world of intellects. In this cosmological scheme, there is no place for imperfect souls that have not become fully actualized during their association with the physical body. In the 'Arshīyya Mullā Ṣadrā asserts that there is an imaginal world intermediate between the spiritual and sensible worlds. All souls that have not attained perfection or unity with the Active Intellect, which is also the station of the Universal Man (al-insān al-kāmil), will be placed in the intermediate world. It is in this intermediate realm of existence that souls will experience certain eschatological events of the Hereafter, as described in the Qurān and Hadīth. In the 'Arshīyya Mullā Ṣadrā explains this reality:

> But it is not like that [referring to Alexander Aphrodisias's view]. Rather, there is another world of being, alive and sensible (mahsūsa) by essence, unlike this (physical) world-a world that is perceived by these true (inner) senses (al-hawās al-haqūqa), not by these transient external ones (al-hawās al-zāhira al-dathara). That world is divided into a sensible Paradise (al-janna al-mahsūsa) containing the felicities of the blessed (na $\left.\bar{i} m ~ a l-s u u^{\prime} a d \bar{a}^{\prime}\right)$, including food, drink, marriage, sensual desire and

[^57]all that could delight the soul and give pleasure to the eyes; and a sensible Hell (nār mahhsūsa) containing the punishments of the wretched ('adhāb al-ashqiy $\bar{a}$ ), including hellfire, torments, serpents and scorpions. If this imaginal world did not exist, what Alexander mentioned would be undeniably true and that would mean that the revealed laws (sharāit) and divine books (al-kutub al-ilähiyya) were lying when they maintained the resurrection (ba'ath) for everyone. ${ }^{14}$
It is significant to note that Mullà Seadrā refers to the sacred law (sharī ${ }^{-}$a) and the divine book (al-kitāb al-ilāh $\bar{h}$ ) in the plural, thus indicating that the rejection of the immortality of the individual human soul is contrary not only to Islamic teachings, but also to the other revealed religions. He was obviously aware of similar debates over this issue among Christian and Jewish thinkers.

Elsewhere in the 'Arshīyya, Mullā Ṣadrā describes the remarkable nature of the human soul and its amazing potentiality:
> . . . the human soul is "the conclusion of the world of sensible things (nihāyat al-‘ālam al-mahsūsat) and the beginning of the spiritual world (bidāyat al- ${ }^{\text {Callam }}$ al-rūhāniyya). It is God's great gateway (bāb Allāh al-'azim), through which one can be brought to the highest kingdom (al-malakūt al-alā); but it also has "a certain portion of all the gates of Hell" (Q. 25:44). It is the dike standing between this world and the other world because it is the form (șurra) of every potency (quwwa) in this world and the matter (mādda) for every form in another world. ${ }^{15}$

Thus Mullā Sadrā views the human soul as the conjunction of the terminal point of the sensible world and the initial point of the spiritual world, or, using a Qurānic description: "the junction of the two seas" (Q. 18:59). ${ }^{16}$ It has the capability of having dominion over the physical world and the possibility of entering into all of the higher levels of reality.

[^58]
## The Immortality of the Imaginative Faculty

One of the most important doctrines discussed by Mullā Ṣadrā concerning the human soul is the immortality of the imaginative faculty (quwwa khayāliyya). In the 'Arshīyya Mullā Ṣadrā states:

In man, the imaginal power is a substance that is independent of this world (jawhar mujarrad), that is, the world of physical beings (al-akwān al-tabíciyya) and of the motions (haraka) and transformations of material things. . . But this power is not (totally) independent of the two realms of generated being (al-kawnayn), since in that case it would have to be (pure) Intellect ('aql) and an object of intellection ( $\left.m a^{〔} q \bar{u} l\right) .{ }^{17}$
By stating that the imaginal power in humans is a substance independent of the sensible world (jawhar mujarrad), Mullā Ṣadrā asserts that the imaginative faculty is immaterial and immortal and does not die when the body dies. Although the imaginative faculty is composed of a substance that is independent of the material world, it is not without connection or relation to this world. In the view of Mullā Sadrā, this imaginative faculty belonging to the inner senses of humans is not totally independent of the two worlds of generated being (al-kawnayn), namely, this world and the Hereafter. If the imaginative faculty were totally independent of both worlds, then it would be deemed pure immaterial intellect ('aql) or spirit.

For Mullā Ṣadrā, therefore, the imaginative faculty belongs to, or is a part of, the imaginal realm (al-şuwar al-khayāliyya). This imaginal realm of existence is a world that corresponds to, or is similar to, the material world we live in, but it is very much richer than the material world. As Mullā Ṣadrā explains:
... The being [of the imaginative faculty] is in another world, one that corresponds to this [physical] world in that it comprises heavens, elements, different species of plants, animals, and so on-only many times over [the things of] this world. Everything that man perceives and sees directly by means of his imaginative faculty (quwwa khayäliyya) and his interior sense (hiss al-batin) does not at all inhere in the "stuff" (jirim) of the brain or in some

[^59]faculty inhering in that locus [as Ibn Sinā had maintained]; nor is it located in the bodies of the heavenly spheres or in a world separate from the soul, as some followers of the Illuminationists [ishräqqī philosophers] have maintained. Instead, it subsists in the soul-not as something inhering in something else, but rather like an act subsisting through its agent. ${ }^{18}$
In other words, Mullā Ṣadrā does not consider our imaginative faculty to be located either in the material stuff of the brain, or in some area of the brain associated with its function-as Ibn Sinā conceived; nor is it located in a separate world independent of the human soul-as held by Suhrawardi. ${ }^{19}$ The imaginative faculty indeed has its locus in the human soul. Yet the relation between the imaginative faculty and the soul is not in the manner of something physically inhabiting or inhering in another thing, but in the manner that an act exists due to the existence of its agent. As he states in the 'Arshiyya:

These "forms" (suwar) present in the world of the soul may differ in manifestness ( $z u h u r$ ) and hiddeness (khifä ${ }^{3}$ ), in intensification (shadda) and weakness ( $d a^{\prime} i f$ ). The stronger and more substantial is the power of this imaginal soul-[namely] the more [the imaginal soul] returns to its own essence and the less it is preoccupied with the distractions of the body and employing the bodily powers of motion-then the more manifestly these forms will appear within the soul and the stronger will be their being. For when these forms have become strengthened and intensified, there is no proportion between them and the things in this world insofar as the intensity of their being, actualization, and their certainty of effect. It is not true, as is popularly supposed, that these forms

[^60]are mere phantom images without regular effects of real being as is the case with most dreams. ${ }^{20}$
In the view of Mullā Sadrā, the degree of manifestation (zuhūr) or hiddenness (khifä ${ }^{\vec{\prime}}$ ) and of intensification (shadda) or weakness (daif) of the imaginal "forms" being perceived by the imaginative faculty is dependent on the strength of the imaginative faculty itself. The greater the functional strength of the imaginative faculty, then the more manifest and intense the imaginal forms perceived by it. The soul's preoccupation with the body directly impinges upon the functional strength of the imaginative faculty by weakening and dissipating it. This explains why, for most individuals, imaginal forms are only perceived in the dream state, when the body is asleep and the soul is less preoccupied with body functions. These imaginal forms are not mere phantom images without objective existence or reality. The imaginal forms are objectively existent and they belong to a level of being that is higher and more intense than that of the sensible world. Yet for the majority of people, their imaginal forms are hidden from them and if manifested in the dream state are often weak; this is due to their souls' overwhelming attachment with the body. The complete manifestation of imaginal forms and the power of our imaginative faculty will only be fully experienced after death when the soul is separated from the body. In the posthumous state, the individual will perceive the full manifestation and intensity of the imaginal forms, and at that time come to realize that the sensible forms of the material world are indeed weaker and less real-relative to the imaginal forms. This is the reverse of the situation in this present world, where the imaginal forms that are perceived for the most part in the dream state appear less real than the vivid sensible forms of the world. Mullā Ṣadrā expresses this point in the 'Arshīyya:

The complete manifestation of these [imaginal] "forms" and the perfection of these forms and the perfection of the power of their being occurs only after death. [This is true] to such a degree that, compared to the forms man will see after death, the forms he sees in this world are like dreams. This is why the Commander of the Faithful ['Alī b. Abī Ṭälib] said: "Humans are asleep-when they

[^61]die, they awaken." Then the unseen becomes immediate vision. In this lies the secret of the return (al-máād) .... ${ }^{21}$
In the understanding of Mullā Ṣadrā, the human imaginative faculty is the end of this material world's sensory modality of being (äkhir hādhihil-nash'atil- $\bar{u} l a)$ and the beginning of the otherworldly spiritual modality of being (awwal al-nashati l-äkhira). ${ }^{22}$ When the soul is separated from the body it carries within itself the perceiving form (al-sūrat al-mudrika) that enables it to perceive sensory things by means of its inner sense (hissī al-bātin). ${ }^{23}$ Thus, although at death the soul is separated from the body and the external senses, the soul continues to perceive forms through its inner senses. In addition, when it is separated from the body the imaginative faculty can directly generate or originate (ibdāa) imaginal forms by its own volition (irāda). In the 'Arshīyya Mulla Ṣadrā explains the creative power of the soul to originate imaginal forms in the following manner:

Extended forms and shapes and structures can occur through the activity of the maker because of the preparedness of certain materials and in association with specific receptive conditions. But those forms may likewise occur by immediate creation (ibdā̃) purely by means of the conceptions and formative directions of the maker, without any association with a [material] receptacle and its location and preparedness. The being of the planets and the heavenly spheres is like that, through God's immediate conception of their principles and formative directions and through His knowledge. . . Those forms do not subsist in the corporeal substance (jirm) of the brain nor in the heavenly bodies, as some people have maintained, nor in a world of phantasmal images subsisting apart from the soul. Rather, they subsist by means of the soul and exist within the domain of the soul. ${ }^{24}$
Forms that have extension and shape can be generated by an individual when the appropriate or correct materials and conditions are present at his disposal. In addition, forms may also be originated

[^62](ibdāa') simply by means of the conception and formative directions of an effective agent, without the presence of the necessary materials and conditions. Here Mullā Șadrā gives the example of God's creation of planets and heavenly bodies as an illustration of such a creation. In Mullā Ṣadräs understanding, God created the heavenly bodies from nothing or without any preceding matter. God's act of creating or originating the heavens from nothing is denoted by the term $i b d \bar{a}{ }^{2} .{ }^{25}$ This is one of the terms used in the Qurān, along with others, such as khalaqa and takwin, to describe God's creative activity; $i b d \bar{a}$ signifies creating or directly originating something out of nothing. Thus, one of God's most beautiful names in Islamic tradition is al-Mubdic, "He who creates from nothing."

Mullā Ṣadrā, like Ibn 'Arabī, believes that the human soul is endowed by God with a similar power to originate forms out of nothing. In the 'Arshiyya he quotes Ibn 'Arabī on this point:

> One of the "people of realization" (al-muhaqqiqū$n)$ [that is, Ibn al-‘Arabī] stated: "Every man creates by his imagination things which have no existence outside the place of his intention... Yet his intention continues to preserve them without this act of preservation at all tiring him; whenever neglect overtakes him, though, that which he created disappears."2

The imaginal forms that originated out of nothing by the human soul exist within the soul. For Mullā Ṣadrā, such imaginal forms that originated by the soul, which exist within it, are "more substantial, more firmly established and permanent in their reality than material forms that are constantly changing and being regenerated. ${ }^{37}$ Invoking a Qurª̄nic analogy, Mullā Sadrā states that the material forms, when compared to the imaginal forms, are "like a mirage in the desert which the thirsty man mistakes for water" (Q. 24:39). ${ }^{28}$

In the posthumous state, everything that an individual conceives of, desires, or longs for, becomes immediately present to

[^63]him. Through the power of the imaginative faculty, the process of conceiving of a thing within our soul is the very same as its presence. Mullā Ṣadrā asserts in the 'Arshīyya that all that a man attains and is requited with in the Hereafter, whether it be the blessings ( $n a^{c}{ }^{\text {i }} m$ ) of Paradise, such as houris (hūr), palaces ( $q u s ̣ \bar{u} r$ ), gardens (jannāt), trees (shajarāt), and streams (anhār), ${ }^{29}$ or the sorts of torments ('adhāb) experienced in Hell, including burning in fire (nār), being bound by chains (salāsil), and bitten by scorpions ('aqārib), and serpents (tháābin) ${ }^{30}$ are "in the essence of his soul (dhat al-nafs): in his intentions (niyyät), meditations (ta'ammulāt), beliefs (i'tiqādāt), and character (akhlāq)."31 Thus, in the afterlife, the ambience of the soul is nothing other than the projections of its inner being. An indivídual's intentions, meditations, beliefs, and character will determine whether he will experience the felicity of Paradise or the suffering of Hell. Every human individual, whether he is among the blessed (su'adā̀) in Paradise or the wretched (ashqiy $\bar{a}$ ) in Hellfire, will experience his own particular complete and independent world specific to himself and his own unique conditions and faculties, in a realm more immense than this material world. Such is the power and potential of the imaginative faculty within the human soul.

In his account of Paradise and Hell, Mullā Ṣadrā makes use of Qurānic vocabulary and its portrayal of the Hereafter. Following the Qurān, Mullā Ṣadrā uses the term janna for Paradise, jahannam for Hell, su'ad $\bar{a}>$ for the blessed of Paradise and $a s h q i y \vec{a} \overrightarrow{ }$ for the wretched in Hell. The specific items mentioned by Mullā Ṣadrā in relation to Paradise and Hell respectively, such as jannät, anhār, hūr, nār, tha'ābin, and aqārib are also from the Qur'ān. The Qur'ān describes Paradise and Hell in vivid and sensuous imageries drawn from the things of this world. In the "third illumination" concerning the states that occur in the other world, Mullā Ṣadrā discusses in a detailed manner the symbolic meanings and significance of these sensual images in the descriptions of Paradise, Hell, and the various eschatological events that human souls will experience in the Hereafter. Mullā Sadrā̉s interpretation of the Qurān's symbolic descriptions of the afterlife may be regarded as a philosophical exegesis of the revealed verses. It is by positing the existence of an imaginal world
29 'Arshiyya, 250; Wisdom of the Throne, 162.
30 'Arshiyya, 252; Wisdom of the Throne, 166.
31 'Arshiyya, 251; Wisdom of the Throne, 164.
intermediate between the spiritual and sensory worlds, and the immortality of the individual soul with its creative power of the imaginative faculty to originate forms without requiring material instruments and receptacles, that Mullā Ṣadrā is able to assert and establish the traditional Islamic view of eschatology as contained in the Qur'ān and Hadith.

A most important principle expounded by Mullā Ṣadrā that is the key to understanding his eschatological views is the independence and catharsis (tajrid) of the imaginative faculty (al-quwwa al-mutakhāyyila) from the body. Mullā Șadrā’s treatment of the soul or psychology takes into account all the various faculties and stages of the development of the soul, from its origination with the body to its final perfection as a spiritual reality, wherein it becomes a perfect theophany of all the divine names and qualities.

## Conclusion

From the above discussion, it can be observed that in his delineation of the various types of souls and their faculties, Mullā Ṣadrā accepts and makes use of the Mashshāī views, primarily of Ibn Sinä’s analysis of the powers and functions of the soul. Mullā Sadrā, however, does not limit himself to the Mashshāī view alone. A significant point of departure of Mullā Ṣadrās psychology from the Mashshā̄ī doctrine of the soul relates to the relationship between the soul and body. If the Mashshā̄ī philosophers such as Ibn Sinnā consider the soul as the organizing principle and entelechy of the natural body, Mullā Sadrā, consistent with his metaphysical and eschatological views, regards the human soul as the organizing principle and entelechy of all subsequent "bodies" that the soul will create for itself, or project from within its own essence via its imaginative faculty, appropriate to the level of being wherein it belongs.

In his exposition of the developmental stages of the soul in the posthumous state, Mullā Sadrā relies heavily on Ibn 'Arabī's ideas, particularly his doctrine of the independence of the imaginative faculty and its creative power to originate forms out of nothing. Mullā Ṣadrā synthesizes Ibn 'Arabī’s teaching about the imaginative faculty of the soul with Suhrawardi's conception of the existence of the imaginal world by correlating the microcosmic imaginal reality with the macrocosmic world of images. With this synthesis, Mullā Ṣadrā establishes a clear and definite relation between the
microcosmic and macrocosmic world of images, which, in turn, provides a metaphysical basis for an intellectually and experientially satisfactory explanation of the Qur'anic eschatological doctrine.

Although Mullā Ṣadrä’s psychological doctrine involves a synthesis or integration of the Mashshā̄ī faculty of psychology, Ibn 'Arabī's view of the imaginative faculty, Suhrawardỉ's intermediate world of images, and Qurānic eschatology, it remains an original and coherent doctrine with its own distinctive perspective and principles. The various views and ideas on the soul and its destiny are synthesized by Mullā Ṣadrā in order to substantiate and demonstrate his own conceptions; hence the major points of difference between his doctrine and the variety of intellectual perspectives he has synthesized.

# The Nature and Significance of Mullā Ṣadrā’s Qurānic Writings ${ }^{1}$ 

Mohammed Rustom

It is fairly well-known among scholars of later Islamic philosophy that Mullā Şadrā wrote a number of works on the Qurān. These consist of some sixteen texts, thirteen of which are independent tafsīrs on select sūras and āyas, and three of which are compositions that deal with various theoretical aspects of the Qurān. Although attempts have been made in modern scholarship to describe each of Sadräs Qurānic works, we still lack a comprehensive overview of their nature and significance. ${ }^{2}$ The absence of a thorough presentation of Ṣadräs Qurānic writings has, in turn, proven to be a serious stumbling-block in discerning his function as an exegete. ${ }^{3}$ Given this lacuna in Ṣadrian scholarship, this article offers a detailed outline of the content, structure, and scope of each of Ṣadräs compositions on the Qur'ān. The material presented here not only broadens our understanding of the importance of Șadräs Quraànic works, but also sets the stage for a more nuanced approach to the theoretical dimensions of his scriptural hermeneutics. ${ }^{4}$

1 Thanks go to Todd Lawson, Maria Subtelny, Sebastian Günther, Shafique Virani, John Walbridge, Sajjad Rizvi, and Caner Dagli.
2 The first such attempt in modern scholarship is to be found in the monumental al-Dharīca ilā taṣānīf al-shī $a$ (Najaf, 1939-87) by Āqā Buzurg Țihrānī (d. 1391/1970). These entries can be categorized as follows: (1) "basic tafsir entries," that is, individual entries which simply list the tafsirs attributed to Ṣadrā (Dharī'a, 4:278-9, 20:76); (2) "isolated tafsir entries," which treat each tafsīr work individually (Dharíca, 4:331, 334, 336-8, 340, 343-4; 15:252); and (3) "isolated non-tafsir entries," which treat Șadrä's other writings on the Qurān individually (Dharī̌a, 2:39; 16:400; 19:62; 21:305, 337). The most recent description of Șadräs Qurānic works is in Sajjad Rizvi, Mullā Ṣadrā Shīräzī: His Life and Works and the Sources for Safavid Philosophy (Oxford: Oxford University Press, 2007), 77-87.
3 For a critical appraisal of the scholarly literature devoted to Sadräs writings on the Qur'ān, see Mohammed Rustom, "Approaching Mullā Ṣadrā as Scriptural Exegete: A Survey of Scholarship on His Quranic Works," Comparative Islamic Studies 6, no. 1 (2008): 75-96.
4 For one such attempt, see Rustom, The Triumph of Mercy: Philosophy and Scripture in Mullā Ṣadrā (Albany: State University of New York Press, forthcoming),

In the annotated list below, I have divided Șadrā’s Qur'ānic writings into four general categories: commentaries on individual sūras, commentaries on individual $\bar{a} y a s$, theoretical works on the Qur'ān, and Qur'ānic works of doubtful authenticity. The list is followed by an appendix that presents a tentative chronology of those works belonging to the first three catagories. These titles are considered in relation to themselves and with respect to S Sadräs other datable, non-Qurānic writings.

## Commentaries on Individual Sūras

## 1. Tafsīr Sūrat al-fātiḥa ${ }^{5}$

This book is Ṣadrā's last complete commentary on a Qur'ānic sūra. Appended to the 180 -page published edition of the tafsir are the philosophical glosses of Mullā 'Alī Nūrī (d. 1246/1830), ${ }^{6}$ a major follower of Ṣadrā’s teachings during the Qajar period, and someone whose writings have served as important philosophical and gnostic texts within the Sadrian tradition. ${ }^{7}$

In both its philosophical and mystical content, the Tafsīr Sūrat al-fätiha is arguably the most profound of Sadrä’s writings on the Qur'ān, as he brings to bear, in his function as commentator on this $s \bar{u} r a$, the entire range of his learning, synthetic abilities, and original insights. This work demonstrates in remarkably lucid fashion the manner in which Ṣadrā addresses issues in ontology, cosmology, psychology, and eschatology in the language of myth and religious symbolism, closely following the work of Ibn 'Arabī (d. 638/1240). ${ }^{8}$

Among the salient aspects of the Tafsīr Sūrat al-fätiḥa are Ṣadräs discussion of the cosmos and its contents as so many instantiations
ch. 1 .
5 Şadrā, Tafsīr al-Qurāan al-karīm, ed. Muhammad Khwājawī (Qum: Intishārāt-i Bīdār, 1987-90), 1:1-183; Majmū' at al-tafāsīr, ed. Ahmad Shīrāzī (Tehran, lithograph, $1322 \mathrm{AH} / 1904$ ), 2-41. On first mention of Ṣadrä’s tafsīrs, where applicable, I provide the page numbers to both the printed and lithographed editions; subsequent references to the tafsir work in question are to the printed edition only.
6 Sadrā, Tafsīr, 1:451-496.
7 For Mullā 'Alī Nūrī, see Seyyed Hossein Nasr, "The Metaphysics of Ṣadr al-Dīn Shīrāzī and Islamic Philosophy in Qajar Iran," in Qajar Iran: Political, Social, and Cultural Change, 1800-1925, ed. Edmund Bosworth and Carole Hillenbrand (Edinburgh: Edinburgh University Press, 1983), 190.
8 Cf. the pertinent remarks in Christian Jambet, L'acte d'être: la philosophie de la révélation chez Mollâ Sadrâ (Paris: Fayard, 2002), 402.
or modes of God's self-praise or hamd (signaled by Q 1:2), and his extended treatment of the question of the nature of idol-worship and the Akbarian doctrine of the "God created in faiths" (al-iläh al-makhlūq fil-‘aqäid). But the Tafsīr Sūrat al-fātiha's most important feature is undoubtedly Sadrā’s in-depth inquiry into the nature of God's all-pervading mercy in the afterlife and the resultant salvation of all human beings; an evaluation that is intimately related to the different paths taken by people during their earthly lives. Although Ṣadräs tafsīr and non-tafsir writings broach this and cognate topics, the Tafsīr Sūrat al-fätiha presents a unique soteriological argument, and one that is equally rooted in both Ṣadräs ontology and the structure of the Fätiha itself. ${ }^{9}$

## 2. Tafsīr Sūrat al-baQara ${ }^{10}$

This tafsir work is likely Ṣadräs last commentary proper. ${ }^{11}$ Although incomplete (it stops at the end of the sūra's sixty-fifth $\bar{a} y a$ ), it is his longest work dedicated to the Qurān, taking up over 1100 pages. Like the Tafsīr Sūrat al-fätiha, this commentary is accompanied by Mullā 'Alī Nūrī’s glosses. ${ }^{12}$

More than any of his other tafsirrs, Ṣadrā is, in a sense, the most "polemical" in this commentary: in a manner not unfamiliar to his method in several sections of the Asfär, he dedicates a good deal of time to refuting a number of the theological positions held by the Ash'arī and Mu'tazilī schools, particularly with respect to questions related to God's foreordainment and the role of human free will, the "eternal" nature of suffering in Hell, ${ }^{13}$ and the temporal origination of God's Speech (kalām).

STadräs concern with theology is evident in this tafsir as well. He tackles, albeit briefly, topics such as the "faith" of Pharaoh ${ }^{14}$ and

[^64]whether or not people will be able to see God in the next life. The most important discussion in terms of theology is the detailed section devoted to $\bar{i} m \bar{a} n$, or "faith," which forms part of his commentary on Q 2:4. After explaining the inadequacy of several of the definitions of $\bar{m} m \bar{a} n$, he divides its contents into fairly standard and broad categories: sayings (aqwāl), states (ahwāl), and actions ( $a^{c} m \bar{a} l$ ). What is interesting in his discussion here is how he relates these three categories to what he calls "the levels and ranks of faith" (darājāt al-ìmān wa-marātibuhu). Here, he makes it clear that everyone is a person of faith ( mu min ). What distinguishes one from another is the level of his understanding (fiqh). It is to the degree of one's understanding of his faith that he will be characterized as more or less faithful.

Important for Ṣadrās understanding of the Qurān is the section devoted to its inimitability ( $i^{\prime} j \overline{\mathrm{a}}$ z al-qur'ān), which he is prompted to discuss based on the challenge made in Q 2:23 to produce "a sūra like it" (sūra min mithlihi). Also, there is one particular section in this commentary in which Ṣadrā discusses the "detached letters" (al-ḥurūf al-muqatṭáa) of the Qurān, closely following Ibn Sīnā’s (d. 428/1037) al-Risāla al-nayrūziyya.

## 3. Tafsīr Sūrat al-Sajda ${ }^{15}$

In the introduction to this commentary, Şadrā lists eight tafsīrs that he had previously written. Based on Sajjad Rizvi and Muhsin Bīdārfar's observations, we can date four of them. ${ }^{16}$ These dates, along with some internal evidence in one of Sadrä's tafsirrs (see the entry on the Tafsīr Sūrat al-zilzāl below), allow us to safely conclude that the earliest this tafsir could have been written is $1037 / 1628$. The latest it could have been written is $1042 / 1632$, when Şadrā wrote his most important theoretical work on scripture, the Mafätī al-ghayb.

The Tafsir Sūrat al-sajda is 135 pages long. It offers a commentary on each verse, and contains an introduction and conclusion, but lacks chapter divisions. More than anything else, it is structured as a running commentary on Q 32. Although there are subheadings

[^65]throughout the work, as is the case with a number of Ṣadräs other tafsirs, they do not seem to play a significant role or have any discernable linguistic/stylistic unity. Rather, they appear to simply divide Sadräs arguments as he proceeds with his points.

Although Sadrā is concerned with questions of eschatology and soteriology in this work (and some of the discussions here may be the direct source of related sections in his Tafsïr Sūrat al-fätiha), his meditations on the nature of the Qur'ān and its mysterious letters are among its unique features. Several verses of the Sūrat al-sajda also prompt him to elaborate on his cosmology, especially as it relates to God's attributes and the temporal origination (hudūth) of the world-which leads to some interesting discussions on psychology, such as the nature of the heart and its relation to the divine Throne, the levels of the "Folk of God" (darajāt ahl allāh), and the function of the Perfect Man (al-insān al-kāmil). It can also be noted that when Ṣadrā discusses the Muḥammadan Light ( $n \bar{u} r$ Muhammadī) here, he seems to rely on his earlier tafsir works, such as the Tafsir Āyat al-kursī and the Tafsir Āyat al-nūr (for which, see below).

## 4. Tafsīr Sūrat yāsīn ${ }^{17}$

This commentary was written in 1030/1621. It is essential for dating Sadrā's other writings and for its incorporation of earlier materials, both by himself and the great Persian philosopher, Afdal al-Dīn Kāshānī (d. 610/1213-1214), commonly known as Bābā Afḍal. ${ }^{18}$ Over 450 pages in length and accompanied by Mullä 'Alī Nūrī's glosses, ${ }^{19}$ there are no real divisions in this book, although it does have a number of generic subheadings. Unlike any of his other works on scripture, this text contains an interesting discussion on the value and merit of poetry; this occurs in the context of Ṣadrä's refutation of the view that the Qurān is merely a form of poetry.

By virtue of the eschatological content of the sūra, the most significant aspect of this tafsir is its treatment of bodily resurrection and the states of the afterlife. Interestingly, the Tafsīr Sūrat yāsīn is

[^66]more concerned with issues of eschatology than any of Sadräs other books on the Qurān. He presents here his fully mature views on the modality of the afterlife with particular reference to the becoming of the soul and the forms it will experience in its posthumous states. Sadrä's psychology and eschatology as detailed here parallel some of his discussions in his al-Mabda' wa-l-ma'äd and his treatment of the states of the afterlife in the Asfär.

One of this tafsir's unique features is its heavy reliance upon the work of Ibn 'Arabī and his followers. Although this is clearly the case in Ṣadrảs other works, this particular text demonstrates the effectiveness of the formulations of the school of Ibn 'Arabī in discussing some of the most vexing and age-old philosophical problems. In particular, Șadrā attempts to address the Neoplatonic belief, discussed by Ibn Sīnā and defended by Suhrawardī (d. 587/1191), concerning the attachment of souls to celestial bodies in the afterlife in order to undergo physical punishment for sins committed on earth. A close reading of Ṣadrä's response to his predecessors reveals that, through the lens of Ibn 'Arabī and his followers, Mullā Ṣadrā offers a remarkable solution which is entirely consistent with his philosophical perspective. ${ }^{20}$ Indeed, Șadrā’s position here sheds a great deal of light on his understanding of the creative aspect of imagination in the next life.

## 5. Tafsīr Sūrat al-Ḥadīd ${ }^{21}$

This book was written around 1022/1613, and is Ṣadrä’s first tafsir work. ${ }^{22}$ It is over 280 pages, and contains an introduction and a conclusion. Like the Tafsir Sūrat al-sajda, it does not consist of chapters as such. Unlike the Tafsīr Sūrat al-sajda, however, it makes consistent use of subheadings throughout the work, each of which is referred to as an "unveiling" (mukāshafa). In its printed edition, Mullā 'Alī Nūrī's glosses are also appended to the text. ${ }^{23}$

[^67]This commentary contains a fine example of how Ṣadräs transcendent philosophy (al-hikma al-muta'āliya) relates to the Qur'ānic message. His doctrine of substantial motion is briefly discussed here, and is linked to his treatment of the increased levels of perception human beings experience in this world and in the next. Consequently, a good deal of this commentary is devoted to matters of psychology and eschatology.

Significantly, Ṣadrā draws on several well-known Qurª̄nic symbols, such as the "preserved tablet" (al-lawh al-mahfuzz) and the "inscribed book" (al-kitāb al-masțūr), to explain how the soul's descent into the world, its subsequent development and return to God, and God's foreordainment of its destiny tie into one another. Here, again, we clearly notice the influence of the school of Ibn 'Arabī upon Ṣadrä’s formulations, especially with respect to his identification of the heart as the locus of the name Allāh, and his understanding of the function of the divine names in the telos of the cosmos.

## 6. Tafsīr Sūrat al-wāqí ${ }^{\text {A }}{ }^{24}$

The date of the composition of this work is not known, but we can certainly place it between 1030/1621 and some time before Ṣadrā penned his Tafsir Sūrat al-sajda. ${ }^{25}$ This tafsīr is over 120 pages and comes with an introduction, subheadings (but no chapter headings), and a conclusion. It is a straightforward running commentary on the surra's principle themes: the final day and the afterlife.

Sadrā makes it clear in his introduction that one cannot understand these eschatological realities without "tasting" (dhawq) and a heightened state of consciousness (wijdān). Consequently, this commentary contains fairly detailed discussions concerning the states of the grave, the resurrection, and the ranks of souls in the afterlife. As in a number of his other books, Șadrā states that the forms of knowledge souls will have in the next life will be commensurate with their levels of knowledge in this life. In his treatment of the function of imagination and its relation to the levels of being, Şadrā bases himself on Ibn 'Arabī's al-Futūhāt al-makkiyya and Fuṣūs al-hikam. ${ }^{26}$

[^68]Perhaps the most interesting features of this commentary are Ṣadräs interpretations of the many eschatological symbols mentioned in the $s \bar{u} r a$. In this sense, this work resembles sections of Sadrä’s Tafsir Sūrat al-hadīd and the later parts of his Asrār al-āyāt, another of his theoretical works on the Qurān.
7. Tafsīr Sūrat al-Jumu ${ }^{\text {A }}{ }^{27}$

The exact date of this work's composition is not certain. Bīdärfar considers it to have been written between 1041/1631 and 1050/1640 (Șadräs commonly acknowledged death date), ${ }^{28}$ while Rizvi dates its composition between 1041/1631 and 1043-4/1634 (a year before Sadrä's newly proposed death date). ${ }^{29}$ In the introduction to his translation of Ṣadrā’s Iksīr al-‘̄ärifin, William Chittick argues that the $I k s i ̄ r$, itself a significant reworking of Bābā Afḍal's Jāwidān-nāma, was written in 1030/1621 or perhaps earlier, since the Tafsïr Sūrat $y a \overline{s i n}$, definitively composed in 1030/1621, contains an expanded version of material already contained in the $I k s i r$. This leads Chittick to conclude that the Iksir must have been written some time before the Tafsir Sürat yāsin. This is significant, Chittick argues, because the $I k s i r i$ itself contains an expanded version of material from Ṣadräs Tafsìr Sūrat al-jumu'a. ${ }^{30}$ If Chittick's observations are correct, the Tafsir Sūrat al-jumu'a would have to be placed before the $I k s i r$ and thus in an earlier phase of Ṣadräs career as opposed to a later phase. Bīdārfar and Rizvi, on the other hand, do not consider this particular tafsìr to be early, most likely because Sadrā does not mention it in the introduction to his Tafsir Sūrat al-sajda. But there seems to be another good reason not to consider the Tafsir Sūrat al-jumu'a as an early work, namely Ṣadräs explicit mention of his Tafsīr Sūrat yāsīn in the Tafsīr Sūrat al-jumu'a itself. ${ }^{31}$

Sadräs Tafsir Sūrat al-jumu'a is a complete commentary on this $s \bar{u} r a$, and is close to 200 pages in length. The commentary contains

27 Şadrā, Tafsir, 7:136-305; Majmū $a t$, 565-589.
28 Bīdārfar, "Taqdīm," 1:110.
29 Rizvi, Mullā Șadrā Shīrāzī, 84. For Rizvi's argument in favor of Ṣadrā’s earlier death date, see 28-30.
30 See Chittick, "Translator's Introduction," in Șadrā, The Elixir of the Gnostics, ed. and trans. William Chittick (Provo, UT: Brigham Young University Press, 2003), xix-xx.

31 See Şadrā, Tafsïr, 7:218. Moreover, some other internal evidence seems to suggest that this book was written after the Asfär (see Șadrā, Tafsïr, 7:256), which was completed in 1037/1628 (Rizvi, Mullā Ṣadrā Shīrāzī, 54).
an introduction, twelve chapters called "dawning places" ( matlaa), ${ }^{32}$ and a conclusion. Mullā 'Alī Nūri’'s glosses are appended to the work. ${ }^{33}$ Each of the matla's of Tafsir Sūrat al-jumu'a are centered around one verse of the $s \bar{u} r a$, the exception being the sixth matlac ${ }^{c}$, which contains comments on verses six and seven, and ninth and tenth matlac, which, combined, do the same for verse ten. The chapters are composed of the generic subheadings characteristic of a number of Șadrä's tafsirs. Each matlac generally contains several ishrāqāt (illuminations) and any one of a number of subheadings, with names such as "moonlight" (nūr qamarī), "earthly shadow" (zill farshī), "moon-shadow" (zill qamarī), and "throne-light" (nūr'arshī).

The opening lines of Sūrat al-jumu'a say that Whatever is in the heavens and the earth glorifies (yusabbihu) God. This verse allows Sadrā to introduce the well-known distinction between necessary and contingent being, since the fact that all things glorify God is itself an indication that they are contingent. Yet not all existents are the same, as some are less dense than others by virtue of their detachment from matter. Thus, the more an existent is characterized by materiality the less intense its glorification of God, and the less it is characterized by materiality the more intense its glorification.

Although it may seem that this commentary deals with questions of ontology more than anything else, ${ }^{34}$ this is only true with respect to the first matlac . The remaining matlac discuss in some detail the divine wisdom behind God's sending prophets to humankind, the nature of knowledge and wisdom, and the meaning of death and eschatology. As a corollary of the latter, some attention is paid to questions of psychology. Characteristic of some of his

32 Those familiar with the Sufi commentary tradition will immediately recognize the (Qur'ānic) term matlac (97:5), since it functions as one of the "senses" of Sufi Qurānic exegesis. It can be translated in several ways: anagogic sense, lookout point, or transcendent perspective. The way Ṣadrā employs the term here indicates that we should understand it within the context of his treatment of hierarchies (both cosmological and psychological), which are developed throughout the tafsir work. Thus, in this context, I have translated the term as "dawning place." For a discussion of this term within the context of the Sufi Qurānic exegetical tradition, see Kristin Zahra Sands, Ṣūfi Commentaries on the Qur'än in Classical Islam (New York: Routledge, 2006), 8-12.
33 Ṣadrā, Tafsīr, 7:446-67.
34 Cf. Ibrahim Kalin, "An Annotated Bibliography of the Works of Mullā Ṣadrā with a Brief Account of his Life," Islamic Studies 42, no.1 (2003): 39; Rizvi, Mullā Ṣadrā Shīrāzī, 84.
other writings, such as the Sih aṣl, Șadrā also spends a good deal of time contrasting people who love this world (especially worldly scholars) with those who love the next world.

This commentary's main area of focus is the "levels of faith" (marātib al-īmān), this is in keeping with Ṣadrä's pronouncements in his introduction to the text, where he states that the work contains "the mothers of the objectives of faith" (ummahāt al-maquasid al-ìmāniyya). ${ }^{35}$ Perhaps more than his other tafsirs, in the Tafsir Sūrat al-jumu'a Ṣadrā expands on that aspect of the religious life that complements faith, namely practice. Șadrās concern with religious practice comes out best toward the end of the tenth matlac, where he dedicates a profound discussion to the "levels of invocation" or "remembrance" (marätib al-dhikr).

## 8. Tafsīr Sūrat al-ṬĀRiQ ${ }^{36}$

This is the second shortest of S Sadrās Qur'ān commentaries. It was composed in 1030/1621. Just over fifty pages in length, the Tafsir Sūrat al-tāriq comes with an important introduction, several subheadings with various titles, and a brief concluding paragraph. In his introduction, Șadräs language betrays its indebtedness to the Sufi Qurānic exegetical tradition, as he speaks of his unveiling the "beauty of the brides" (jamāl al-'arä̀is) and "virgins" (abkār) of the Qur'ān's sūras and āyas. ${ }^{37}$ He also alludes to the function of the bestowal of divine mercy in comprehending the Qur'ān. ${ }^{38}$

Thematically, the Tafsīr Sūrat al-teäriq is similar to parts of the Tafsīr Sūrat al-wäqia. The most interesting section of the commentary is its discussion of cosmology and how the existence of the heavens (sama $\vec{a}^{\prime}$ ) mentioned in the opening verse of Sūrat al-tāriq point to the existence of God. Here Sadrā attempts to establish the contingency of the heavens, and, in doing so, goes on to show how that which is contingent necessarily points to that which is beyond itself, namely the Necessary (al-wājib). One aspect of this commentary not to be found in Ṣadrās other tafsīrs is his treatment of the stages of man's development (prompted by verses six and seven of the sūra). This point is a perfect complement to Sadräs doctrine

[^69]of substantial motion (al-haraka al-jawhariyya), although he does not explicitly draw the connection here.
9. TAFSĪR SŪRAT AL-ACLA ${ }^{39}$

Like several of the other tafsirs described above, this work was most likely written after 1022/1613, and certainly before the composition of Ṣadrā’s Tafsīr Sūrat al-sajda. A relatively short treatise (less than fifty pages), the Tafsīr Sūrat al-alā is the most structured of all of Sadräs writings on the Qur'ān. It contains an introduction, seven chapters, ${ }^{40}$ and a very short concluding paragraph. Each chapter is entitled tasbīh ("declaration of transcendence" or "glorification"), and each tasbīh is devoted to one or more of the su$r a ' s ~ v e r s e s . ~$

The sūra begins in the imperative, commanding readers to glorify the name of God (sabbih ism rabbika l-a ${ }^{c} \bar{l} \bar{a}$ ), and this is the reason Ṣadrā calls the chapters of his commentary tasbïhs. He begins his commentary by explaining that the primary denotation (al-maqṣu$d$ al-aṣlī) of the root s.b.h. is God's transcendence and exaltedness. Although the root denotes "glorification," it does so as a result of stating how other and far removed God is. Thus, each chapter begins with God's transcendence and then addresses a variety of issues, such as God's providence and solicitude for His creatures, His attributes, and the types of damnation and felicity people will experience in the afterlife.

## 10. Tafsīr Sūrat al-ZilzĀL ${ }^{41}$

By far the most modest of Șadrä’s commentaries on a Qur'ānic sūra-both in size and scope-this thirty-four page work contains a short introduction, generic subheadings, and a brief conclusion. We know that this tafsir was written some time before 1042/1632, since Ṣadrā refers to it by name in his Tafsīr Sūrat al-sajda. And, more significantly, he explicitly mentions his famous al-Shawähid al-rubübiyya in this tafsīr. ${ }^{42}$ As Rizvi observes, the Shawāhid must have been completed before 1041/1631, since in this text Ṣadrā speaks of his esteemed teacher, Mīr Dāmād (d. 1041/1631), as still alive. ${ }^{43}$ The Shawähid is a mature work and was the subject of a number of

[^70]important commentaries, the most significant of which is by the Qajar philosopher and follower of Ṣadrā, Mullā Hādī Sabziwārī (d. 1289/1873). According to Rizvi, the Shawāhid was completed between 1030/1621 and 1040/1630, but certainly before 1041/1631. Since the Asfär was completed in 1037/1628 and the Shawähid was in all likelihood written after the Asfär's completion, it would be safe to date the completion of the Shawähid somewhere between $1037 / 1628$ and 1041/1631. Since the Tafsïr Sūrat al-zilzäl mentions the Shawähid, the earliest it could have been written is 1628 . We can, therefore, locate the date of this tafsī's composition somewhere between 1037/1628 and 1041/1632.

There are a few instances in this tafsir where Ṣadrā directly links the notion of "scripture" to his ontology and cosmology. ${ }^{44}$ Some interesting points also emerge in his exposition of the nature of the scrolls (suhuf) of peoples' deeds which will be brought forth on the final day. Although this particular sūra does not mention these scrolls, its last two verses speak about people "seeing" their good and evil actions. The notion of "seeing" in the afterlife is therefore one of the major themes that runs through this commentary.

## Commentaries on Individual Āyas

## 11. TAFSĪR Āyat al-KURSī ${ }^{45}$

This work, which is over 300 pages long, was written around 1022/1613 and is thus one of Sadrä's earliest works devoted to the Qur'ān. Contrary to what the work's title indicates, it is not only a commentary on the Throne verse (Q 2:255). Half of the text is actually a commentary on the two verses that follow it. The book is divided into an introduction, twenty discussions (maqāla) with different generic titles, and a conclusion. The first eleven discussions are devoted to commenting on the Throne verse, discussions twelve to fifteen to Q 2:256, and discussions sixteen to twenty to Q 2:257. Like his Tafsir Sūrat al-baqara, Șadräs comments on the other two

[^71]verses of this $s \bar{u} r a$ also allow him to address issues related to the meaning of faith and unbelief.

The mention of "intercession" in Q 2:255, "the firm handle" (al-'urwat al-wuthqā) in Q 2:256, and God's walāya in Q 2:257 prompts Șadrā to discuss the institution of the Imamate and its legitimacy, as well as the reality of "intercession" on the day of judgment, concerns that he does not display in any of his other tafsirs. ${ }^{46}$ It is difficult to determine why the distinctly "Shī 1 " character of this book almost disappears by the time we reach Ṣadräs final tafsirr. At the same time, his last work on "scripture," the incomplete Sharh Ușūl al-käfi (completed in 1043-4/1634), is just as Shīī in nature as the Tafsir Āyat al-kursī.

Sadrā also deals here with the nature of being, God's mercy, and the divine names and attributes. Significantly, several key features of this work in matters concerning eschatology and soteriology, the significance of the tahlil formula, and the nature of God's essence and attributes, parallel or even correspond to sections of Ṣadräs Tafsir Sūrat al-fätiha, and thus partly serve as one of this text's main sources.

## 12. Tafsīr Āyat al-NŪR ${ }^{47}$

Completed in 1030/1621, Șadrä's extensive commentary on the light verse (slightly over eighty pages) contains an introduction, six sections (fusūul, often divided into subsections with various generic subtitles), and a concluding statement (khätima wa-wasiyya). Of all of his works on the Qurān, this tafsir has received the most attention in modern scholarship. There seems to be a good justification for this, since this particular tafsir represents many of Sadräs central concerns as a philosopher/mystic commenting upon scripture.

46 One of the alternative titles of this work is Tafsir al- ${ }^{-}$urwat al-wuthqū. This term may be linked with the intercession granted by the Imams and the wellknown hadīth of the "ship of Noah" (safinat Nūh). See Muhammad Khwājawi’s introduction in Șadrā, Tafsīr, 4:5. This title (i.e., Tafsir al-'urwat al-wuthqā̄) has at times been mistakenly attributed to Ṣadrā’s son. See Ma'ṣūm 'Alī Shāh, Tarảiq al-haqā̀iq, ed. Muhammad Ja‘far Maḥjūb (Tehran: Kitābkhāna-yi Sanā̄̄̄, 1960), 1:182. 'Abd al-Nabī Qazwin̄̄, Tatmīm Amal al-ämil, ed. Sayyid Ahmad Husayni (Qum: Maktabat Āyat Allāh Mar'ashī, 1987), 51, seems to attribute this work to Ṣadrä’s son as well, but refers to it as Tafsir Āyat al-kursī.
47 Ṣadrā, Tafsir, 4:345-427/Majmū $\operatorname{c} a t$, 358-375. Translated as On the Hermeneutics of the Light Verse of the Qur'än, trans. Latimah Peerwani (London: ICAS Press, 2004).

Since there is a fairly long commentary tradition on the light verse, Ṣadrā draws on the commentaries by Ibn Sīnā, Ghazālī (d. 505/1111), Fakhr al-Dīn al-Rāzī (d. 606/1210), and Naṣīr al-Dīn Ṭūsī (d. 672/1274). Apart from his citations from the Imams, he also demonstrates his familiarity with the sayings of the Sufis, citing figures such as Hasan al-Baṣrī (d. 110/728), Kharrāz (d. 286/899), Dhū 1-Nūn (d. 245/86o), Abū Yazīd Bisṭāmī (d. 234/848 or 261/875), Shiblī (d. 334/946), and, indirectly, 'Ayn al-Quḍāt Hamadānī (d. 526/1131).48

As would be expected in this commentary, Ṣadrā clearly identifies light with being and brings it to bear upon the verse's pregnant symbology. This then allows him to relate the fundamentality of light and the verse's symbols to his psychology, cosmology, and anthropology. The nature and cosmic function of the Perfect Man is brought out particularly well here. Unlike Șadrä's other tafsirs, there seems to be more emphasis in this text upon the question of self-knowledge, once again evincing the influence of the work of Bābā Afḍal.

## 13. Tafsīi Qur'ān 27:8849

This three-page, incomplete commentary on Q 27:88, And you look at the mountains, deeming them to be still. ... seems to have first been attributed to Ṣadrā by Āqā Buzurg. ${ }^{50}$ It might be best to place this work at a very early period in Ṣadrās career because of its distinctly Shici ic undertones. ${ }^{51}$ Assuming that this treatise is an early work, it might be a good example of what Sadrā had in mind when he spoke of his "miscellaneous writings" (mutafarraqāt) on the Qur'ān, and

[^72]which he distinguished from his more complete tafsirrs. ${ }^{52}$ Indeed, the work is "scattered" in that it reads like a set of stray reflections on Q 27:88. In terms of both style and content, this text resembles Sadräs other tafisirs, and so there is no good reason to assume that he is not its author, especially since the treatise clearly alludes to (but does not develop) Ṣadrảs doctrine of substantial motion.

## Theoretical Works on the Qur'ān

14. Mafātị̄ al-Ghayb ${ }^{53}$

In the final phase of Sadräs career, his writings on the Qur'ān took on a slightly different focus. Whereas before $1041 / 1631$ he had written a number of independent commentaries on sūras and $\bar{a} y a s$, from 1041/1631 to the end of his life he began to write books that deal with a variety of hermeneutical questions and themes related to the Qur'ān. This shift in focus is best evidenced in the Mafätīh al-ghayb (cf. Q 6:59) written in 1042/1632.

It is not quite clear why Ṣadrā did not devote a treatise to independent questions concerning the Qurān until a much later date in his intellectual life. It would be incorrect to say that the Mafátīh was written after Ṣadrā’s intellectual perspective had crystallized, since his first tafsir work is quite mature, and was completed a considerable time after the commencement of the Asfär. It would also be incorrect to say that Ṣadrā wrote the Mafätīh as an "introduction" to his Qurān commentaries, since there is little evidence in the Mafatith itself that suggests this. All that we can say with certainty is that, after having already written over ten tafsirrs, Ṣadrä’s perspective deepened by the time he penned the Mafátih , and he was thus in a better position to address the general hermeneutical questions and important themes related to the Qurā̄n. Thus, the Mafätīh can be said to present the epitome of Ṣadrảs hermeneutical approach to the Qurān. ${ }^{54}$

The published version of the Mafätih is over 700 pages and is accompanied by Mullā 'Alī Nūrī's extensive glosses. ${ }^{55}$ The book contains an important introduction and twenty chapters or "keys"

[^73](mafátih), the first ten of which comprise part one, and the last ten of which comprise part two. Each chapter consists of various subtitles, all of which have specific titles.

Technically speaking, the Mafätīh is not a work on the Qurān or on Qur'ānic hermeneutics, since only the first two miftāhs are concerned with the Qurān as such. Miftăh 1 (which is a significantly expanded discussion of several sections of Ṣadrảs Asfär and, to a lesser extent, parts of his Tafsīr Sūrat al-sajda) and miftāh 2 inform the remaining eighteen miftähs in such a way that, without them, understanding how the Mafatith in its entirety is meant to outline Sadrä's hermeneutics is impossible. Thus, miftăh 4 , which concerns the different types of "inspiration" (ilhām) a person may receive, cannot, in and of itself, function as an outline of Sadrảs hermeneutics, but it does inform what Ṣadrā says in miftäh 1, where he discusses "revelation" (wahy). This means that the book's chapters beyond miftāh 2-dealing as they do with such topics as the nature of knowledge, angelology, eschatology, the creation of the world, and wayfaring on the path to God-do not allow one to abstract Ṣadrảs hermeneutical theory proper. They function as practical applications of the theoretical considerations laid out in miftăh 1 and miftäh 2 , or, in rare cases, elaborate upon some of the ideas discussed in them. From this perspective, those sections in miftāhs 3-20, where Ṣadrā deals with the Qurăn, resemble his reflections on its verses to be found in his tafsir and non-tafsir works.
15. Asrār al-ĀYĀT WA-ANWĀr AL-bayyinā $T^{56}$

The Asrār al-āyāt was written during the final phase of Sadrā’s career. It is over 200 pages in length, while Mullā 'Alī Nūrīs glosses are longer than the book itself. ${ }^{57}$ The Asrār consists of an introduction and three sections (taraf). Each section is subdivided into several subsections known as "places of witnessing" (mashhad), each of which contains several principles ( $q \bar{a} \subset i d a$ ). The scope of this work is vast, for in it Ṣadrā discusses a wide range of theological and philosophical topics, often drawing upon verses of the Qur'ān in his discussions.

[^74]The Asrār deals with various philosophical and mystical issues: the path of the wayfarers to God and the method of those who are "firmly rooted in knowledge" (an allusion to Q 3:7), proofs for God's existence, the nature of the Supreme Name (al-ism al-a'zam) and its locus of manifestation (mazhar, i.e., the Perfect Man), the Muhammadan Reality, the temporal origination of the world, meditations on the transience of this worldly life, and eschatology. In the Asrār, Șadrā also discusses the names and qualities of the Qurān, the difference between God's speech and His book, the modality of revelation to the prophets, the nature of the divine book, God's address (khitāb) to His creatures, and the "Perfect Words" (al-kalimāt al-tāmmāt) referred to in a famous hadīth.

## 16. MUTASHĀBIHĀT AL-QUR ${ }^{2} \bar{A} N^{58}$

Although we do not have a date of composition for this short treatise on the "ambiguous" verses of the Qur'ān, it may have been written after the Mafãtih, since parts of the treatise seem to expand on shorter discussions in corresponding sections of the Mafätīh. ${ }^{59}$ The treatise itself consists of an introduction and five chapters (fusūl), and is no more than thirty pages long.

STadrā begins this text by summarizing the problem of the ambiguous verses and briefly highlighting the views of his predecessors. Here, he charges a number of Qurān commentators' interpretations of these verses as being nothing more than sophistry. Ṣadrā then launches an attack on the interpretations of scripture carried out by "the deniers of the divine attributes" (ahl al-ta' $t i t)$. After clearing the ground, so to speak, he moves on to his own treatment of the ambiguous verses, discussing the nature of metaphor and explaining how unveiling (kashf) functions in the interpretation of these verses. Sadrā is careful to tell his readers that not all verses that cannot be understood rationally are to be interpreted metaphorically. It is

[^75]precisely through "unveiling" that one can come to know the reality of those Qur"ānic passages that seem to defy reason.

## Qurānic Works of Doubtful Authenticity

17-19. Tafsīrs Sūrat Yūsūf, ṭalāq, and qadr
Carl Brockelmann ascribes the Tafsìr Sūrat Yūsūf to Ṣadrā. But no reference to this work is found in Ṣadräs writings; and there does appear to be one rather late reference to the Tafsir Sūrat al-talāq. ${ }^{60}$ There do not appear to be any extant manuscripts of the Tafsīr Sürat al-talāq or the Tafsir Sūrat al-qadr.
20. Tafsīr Sūrat al-ḍuḥā

Several authors, the first of whom appears to have been Āqā Buzurg, have ascribed this title to Ṣadrā. The Tafsīr Sūrat al-ḍuhā is listed in the "individual tafsir entries" of the Dharī ${ }^{-}$, ${ }^{61}$ but does not appear among the titles listed in its "basic tafsir entries." It is difficult to determine whether or not the first of the two "basic tafsir entries" was written before the entry on the Tafsīr Sūrat al-duhā found its way into the list of "individual tafsir entries." Although the former's entry number is 1283 , and the latter is numbered 1466 , its precedence relates to alphabetical order. Thus, it is not possible to judge whether or not $\bar{A} q \bar{a}$ Buzurg wished to amend his first list of "basic tafsir entries" but did not have the opportunity to do so. In fact, the volume in which both of these entries appear was edited and printed after Āqā Buzurg's death under the care of his sons. ${ }^{62}$ The problem is further complicated by the fact that the first list of "basic tafsir entries" says the source for its listing of Sadräs tafsirs is a collection of Ṣadrä’s tafsīr printed in 1333/1914. But the Tafsïr Sūrat al-duhā is reported by Āqā Buzurg to have been found in a printed collection of his tafsirs dating to $1332 / 1913 .{ }^{63}$ All subsequent entries in the Dharī a that make reference to this printed collection date it to $1332 / 1913$, so the $1333 / 1914$ date is likely to have been a slip of the

[^76]pen on the part of the author. The fact that Āqā Buzurg does not have an entry on this work in his listing of "individual tafsir entries" may also call its attribution to Ṣadrā into question. According to Nahīd Bāqirī Khurramdashtī and Fāṭima Asgharī, this title is extant in manuscript form. ${ }^{64}$

## 21. Tafsīr Sūrat al-IKhlāṣ̣ ${ }^{65}$

This title is not commonly ascribed to Sodrā, but is included in some of the more recent bibliographies of his works. ${ }^{66}$ Because the text cannot be dated to any particular period, if Ṣadrā is its author, he could have written it at any point in his career. Compared to his other tafsīrs, the Tafsīr Sūrat al-ikhläṣ is structured differently, and its discussions are not as detailed as those in texts of a similar size (i.e., less than forty pages). The tafsir is strangely divided into two parts, which seem to be two separate treatises. Part 1 consists of an introduction composed of six sections or "merits" ( $f \vec{a} i d a$ ), comments on the sūra's verses, and a conclusion that is composed of two "merits." The first part of the commentary is mostly concerned with proving God's oneness. There is nothing specifically Ṣadrian about this part of the commentary. The language is fairly straightforward, and a reliance upon the terminology of the school of Ibn 'Arabi is evidenced throughout.

The second part of the tafsir is also a running commentary on each of the verses of Q 112. In the introduction to the second part, which is the most important section of the Tafsir Sūrat al-ikhläs, the author briefly discusses the symbolism of the letters of the basmala.
 RUMŪZ AL-QUR'ĀN, AND TA'LĪQA 'ALĀ ANWĀR AL-TANZĪL
The $M a^{〔} \bar{a} n \overline{1}$ was first listed by Khurramdashtī and Assgharī ${ }^{67}$ They say that it is a short treatise that discusses some of the individual terms and/or phrases found in the Qurāan. Șadrā does not appear to refer to this work in his writings. In all likelihood, it too is an excerpt from a larger work. This hypothesis may be correct, since in Āqā

64 Nahīd Bāqirī Khurramdashtī (with the assistance of Fäțima Aṣgharī), Kitabshināsī-yi jāmic-i Mullā Șadrā (Tehran: SIPRIn, 1999), 72.
65 Ṣadrā, Majmū̄at al-rasā̃̉il al-falsafiyya, ed. Ḥāmid Nājī Iṣfahānī (Beirut: Dār Ihyā̄’ Turāth al-'Arabī, n.d., repr. ed.), 429-472.
66 See Kalin, "An Annotated Bibliography," 40; Khurramdashtī and Aṣgharī, Kitabshināsī-yi jämić-i Mullā Ṣadrā, 73; Rizvi, Mullā Ṣadrā Shīrāzī, 109. Khurramdashtī and Aṣghārī, Kitābshināsī-yi jamici-i Mullā Ṣadrā, 74.

Buzurg's content description of Ṣadrā’s Mafätīh, he states that one of the sections in miftāh 1 is about the "ma'änīal-alfäz al-mufrada" of the Qur'ān. ${ }^{68}$ Going on this description alone, it appears to correspond to miftäh 1:1-3. The Risäla fi rumūz al-qur'ān, which is only listed by Brockelmann, ${ }^{69}$ is likely to be the same as the Ma'ān̄ , or at least a part of it, since its title indicates that it corresponds to miftăh 1:1, which is about the symbols ( $r u m \bar{u} z$ ) of the Qurān.

Thanks to Ṣadrās inventory of books in his personal library, ${ }^{70}$ we know that he was familiar with the tafsir of the famous Sunni theologian and exegete, 'Abd Allāh al-Bayḍāwī (d. 716/1316), parts of whose Anwār al-tanzil were in his possession. ${ }^{71}$ However, the common attribution of a set of glosses on this text to Ṣadrā under the title Ta ${ }^{\text {Cİqqa }}$ alā Anwār al-tanzīl ${ }^{72}$ is, in all likelihood, mistaken. ${ }^{73}$

68 Āqā Buzurg, Dharīa, 21:305.
69 Brockelmann, Geschichte der arabischen Litteratur, Suppl. 2:589.
70 See Ṣadrā, Yāddāsht-hā-yi Mullā Ṣadrā hamrāh bā fihrist-i kitābkhāna-yi shakhṣī-yi Mullā Ṣadrā, ed. Muḥammad Barakat (Qum: Intishārāt-i Bīdār, 1377Sh/1998). It is reproduced in English in Rizvi, Mullā Ṣadrā Shīrāzī, 117-135. For the entry on Bayḍāwī, see ibid., 118-119. This inventory of works, although very useful, certainly does not present us with a complete listing of all of the texts in Şadrảs possession over the course of his career. According to the editor of the catalog of Șadräs personal library, the latest Șadrā could have drawn up this list would have been around two decades before his death (see Ṣadrā, Yä $d d \bar{a} s h t-h \bar{a}, 8-9)$.
71 For this work, see Bayḍāwī, Anwār al-tanzīl wa-asrār al-ta'wīl (Cairo: Dār al-Kutub al-'Arabiyya, 1911).
72 See, for example, Dihqan Mangabadi, "Mullā Ṣadrās Method of Qur'ān Commentary," in Eschatology, Exegesis, Hadith (Islam-West Philosophical Dialogue: The Papers Presented at the World Congress on Mullā Ṣadrā, May, 1999) (Tehran: SIPRIn, 2005), 441, where the author has "Hahiyyah (sic.) bar ( marginal gloss on) Tafsīr Baydari (sic)"; Muḥammad 'Alī Mudarris, Rayhānat al-adab (Tehran: Kitābfurūshī-yi Khayyām, 1369Sh/1990), 4:419.
73 See Rizvi, Mullā Ṣadrā Shīrāzī, 116.

## Appendix

## Toward a Chronology of Mullā Ṣadrā’s Qurānic Works

Below is a tentative chronology of Sadrā’s Qur'ān-related compositions which are of unquestionable authenticity. ${ }^{74}$ The first table considers these works alone, and the second with respect to his datable, non-Qurānic writings. In order to avoid confusion, I have only employed Gregorian dates.
A Tentative Chronology of Ṣadrās Qurānic Works

| Year | Title | Notes |
| :---: | :---: | :---: |
| ca. 1613 | T. S. Hadid | First tafsīr work; before T. $\bar{A}$. Kursi |
| ca. 1613 | T. Ā. Kursī | Shortly after T. S. Hadìd |
| ca. 1613 | T. Q 27:88 | Incomplete; likely a very early work |
| 1621 | T. $\bar{A} . N \bar{u} r$ | Before T. S. Sajda |
| 1621 | T. S. Tāriq | Before T. S. Sajda |
| 1621 | T. S. Yāsīn | Before T. S. Sajda |
| 1621-32 | T. S. Wāqia | Before T. S. Sajda; after T. S. Yāsīn |
| 1621-32 | T. S. Alà | Before T. S. Sajda |
| 1628-32 | T. S. Jumu'a | Before T. S. Sajda?; after T. S. Yāsīn |
| 1628-32 | T. S. Zilzāl | Before T. S. Sajda |
| 1628-32 | T. S. Sajda | After all of the above (but not T. S. Jumu'a?); before Mafātīh |
| 1631 | Asrār | Possibly after Mafätīh |
| 1632 | Mafātīh |  |
| 1632-34 | Mutashāb | Most likely after Mafätīh |
| 1632-34 | T. S. Fātiha | After Mafätīh |
| 1632-34 | T. S. Baqara | After T. S. Fātiḥa |

[^77]A Chronology of Ṣadrä’s Qurānic Works vis-à-vis His Datable, non-Qur'ānic Writings

| Year | Title | Notes |
| :---: | :---: | :---: |
| 1606 | Mabda' |  |
| * ca. 1613 | T. S. Hadìd | First tafsìr work; before T. $\bar{A}$. Kurs $\bar{\imath}$ |
| * ca. 1613 | T. $\bar{A}$. Kursī | Shortly after T. S. Hadīd |
| * ca. 1613 | T. Q 27:88 | Incomplete; likely a very early work |
| 1614 | Wāridāt | 1621? |
| 1618 | Kasr |  |
| 1606-20 | Sh. al-Hidāya | Completed around 1606, reworked in 1620 |

# Book Reviews 

## Christian Jambet

# THE ACT OF BEING: THE PHILOSOPHY OF REVELATION IN MULLA $\operatorname{SADR} \bar{A}$ 

Translated by Jeff Fort. New York: Zone Books, 2006. 497 pp.

Reviewed by: Robert J. Dobie

While the ostensible purpose of this book is to study the metaphysical thought of the seventeenth-century Iranian sage, Mullā Șadrā (1571-1640), Christian Jambet's book is more a metaphysical exploration of the very nature of things, using Sadräs work as a sort of launching pad. In three parts, Jambet traces the existential revolution that Mulla Ṣadrā initiates with particular reference to his great Iranian predecessor, Avicenna; the implications of this revolution for our understanding first, of being itself, and then for our understanding of divine revelation and human salvation.

We can separate three strands in Jambet's argument that cross and weave and ultimately come together. The first strand is, properly speaking, not metaphysical but historical: that is, it shows that Islamic philosophy did not come to an end with Averroes but, to the contrary, flourished, particularly farther east, in Shīi Iran, where a long tradition of esoteric Qurānic exegesis encouraged it. This is what David Burrell calls the "second phase" in the history of Islamic thought, in which al-Ghazāli's destructio of the "philosophers" was not an end but merely a dialectical turn in the development of Islamic thought. Thinkers such as Ibn 'Arabī, Nașr al-Dīn al-Ṭusī, and, of course, Mullā Sadrā pursued complex and extensive metaphysical projects, though under the rubric of theosophy ('ilm ilahiyya), "wisdom" (hikma), or Qur'ānic exegesis rather than that of "philosophy" (falsafa).

This brings us, then, to the second strand of the argument: that philosophical thought is itself exegetical. For Mullā Ṣadrā it is naïve to suppose that theology deals with the exegesis of authoritative texts while philosophy proceeds, with the aid of natural reason
alone, from reality itself. In fact, all thinking is interpretive, as Jambet makes clear:

Philosophy is not a discipline separate from exegesis; rather, it is a style of exegesis, although it uses its own means: judgment and demonstration. Metaphysics remains closely connected to other hermeneutic procedures, since its object-being-can be conceived only as the real and as coinciding with the nature of God, and since God gives Himself over to being known in scriptural revelation. Thus, we can speak of an exegetic philosophy, a philosophical exegesis of God, an exegesis of the book and its interpreters, an exegesis of the self. (46)

No discourse about the nature of reality can be separated from an examination of the self that comes to know it, nor can there be a discourse about the self apart from one about the reality of which the self is a constituent part. This is why philosophy is inherently exegetical, unlike the natural sciences. The latter presupposes a purely objective world, devoid of subjectivity, while philosophy, if it is to grasp reality as such, must grasp reality as an interplay between objective and subjective, between being and knowledge.

This is so because-and this is the third strand of the argumentbeing is in itself luminous and dynamic. Indeed, for Jambet, what most distinguishes the metaphysics of Mullā Sadrā is its dynamic character: being or existence as such is, for the Iranian philosopher, always pulsating with life and intelligence:

> The act of existing is the immediate luminous presence of the thing itself, its pure immanence. Quiddity had no other being than that which is conferred by the act of existence. Sadra thus explains that it is the shadow of the act of being. The quiddity of an existent is the share of darkness and shadow that marks the limit of its act of being. (77)

More fundamental than the static essence of the quiddity of being is the dynamic flow of existence: existence is a "flow" precisely because it emanates from the pure act of existing, which is God, and flows back to that source. Here, Mullā Ṣadrā is clearly indebted to the Neoplatonic scheme of emanation and return. But, like Aquinas
before him, Mullā Ṣadrā marries Neoplatonic existential dynamism to the rigor and precision of Aristotle's metaphysical thought:

The ontology of the act of being reverses the Aristotelian perspective, in that it does not exhaust the metaphysical quest by grasping ousia as quiddity but realizes it by grasping ousia as the effectivity of an einai, of a being. To on, the being, is brought back to its beingness, that is, to its einai; everything mawjud, everything "that is found" in the being, exits through its wujud, its "finding itself," its being there. (110)
Mullā Ṣadrā, again, much like Aquinas, thinks past the question of what things are and what sustains them in being to their very act of existence, to their very "presencing," an insight that Avicenna hinted at but never, according to Ṣadrā, brought out clearly. This "act of being" is also a self-luminous "finding itself" (wujūd or "finding," "existing") that reveals what things are. In that sense, "to be" is always "to be revealed," which, in turn, is always to be present to intellect.

Mullā Ṣadrā's concept of "substantial motion" is consistent with his exposition of a dynamic, Neoplatonic metaphysics. Motion is not, as Aristotle would have it, an accidental feature of substance but belongs, by virtue of its act of being, to the very essence of substantiality itself. The act of being is a pure action or actuality that develops in intensity according to the essential forms that limit it, moving from substantial conditions of more limitation to those of less, at least in the case of intellectual substances. Thus, according to Mullā Ṣadrā, the human soul is a substance that moves in a certain direction by virtue of its intellectual nature: from almost pure materiality in its "first birth" to pure intellectual substantiality after its death or "second birth."

Metaphysical knowledge, then, is not just a static and abstract knowledge of the "furniture" of the universe, but also a knowledge of the soul's trajectory within the universe, which is why, again, metaphysics is essentially hermeneutical: we cannot understand the structure of being apart from the motion of the soul itself. The actualization of the soul's intellectual nature is part of the emanation and return of the act of being to the First Actuality of all being, who is God. It is also a part and parcel of its knowledge of being. Thus, as Jambet notes toward the end of his book, "Revelation is existence;
existence is revelation" (404). To exist is to reveal the dynamic act of being "behind" and, in a sense, "beyond" all existent things or essences. To reveal is to make present the creature or essence to intelligence, which, in the case of the human soul, is to make the creature present to himself. Thus, the ontology of Islam is bound up with being, insofar as Islam is revealed religion-a revelation of being:

Islamic philosophy can no more be considered an epiphenomenon of Islam than Islam itself can be considered a cultural epiphenomenon. This philosophy is the ontology of Islam; it is the discourse that says, at each of its stages and according to prophetic revelation, what being is. As a discourse on being, it is also a discourse on revelation. As an exegesis of revelation, it accedes to being as being. It thus states the relation of Islam to the truth of being, that is, a constitutive moment of our own relation to being, of our own practice of truth. (21)
All knowledge of being as such, all genuine metaphysics, is a communication or revelation of being itself to the being who can receive that communication. As such, to the degree that a thought is aware of being as revelation and revelation as an "unveiling" of the truth of being, to that degree that awareness is a disclosure of being to itself or, better, God's disclosure of Himself to Himself in and through the intelligent believer. The revealed text, then, is that which "crystallizes" this awareness of the true nature of being as revelation.

Jambet's book is a profound meditation on a profound and powerful metaphysical thinker who deserves to be better known in the West. And yet, his meditative approach has its disadvantages. He pulls texts from the vast corpus of Mullā Ṣadräs works, but rarely alerts the reader as to the context of the passage under discussion. Also, Jambet does not take into account the development of Mullā Sadrä’s thought as much as some readers might want: as any scholar knows who has worked extensively on a philosopher, his or her thought is rarely complete but usually undergoes considerable development. Finally, the parallels between Mullā Ṣadräs doctrine of the act of being and Thomas Aquinas' doctrine of the actus essendi are too obvious not to raise questions and ideas in many readers' minds. While the focus of Jambet's book does not, strictly speaking,
obligate him to discuss these parallels, even a brief discussion of them would have left at least this reviewer more satisfied. It would have also, I believe, drawn the educated western reader even more deeply into Mullā Ṣadräs thought. Nevertheless, the virtues of this book far outweigh any shortcomings and it contributes much to our understanding of a neglected (at least, in the West) but important metaphysical tradition.

# Sajjad H. Rizvi <br> MULLĀ ȘADRĀ AND METAPHYSICS: <br> MODULATION OF BEING 

London: Routledge, 2009. xiii +222 pp.
Reviewed by: Omar W. Nasim

In this book, the learned author successfully presents a wideranging and detailed look at one of Mullā Șadräs central metaphysical tenets, namely, the "modulation" (tashkik) of being ( $w u j \bar{u} d$ ). The work before us, however, is one that is not easily accessible to the non-philosopher, and assumes on the part of the reader a good knowledge of not only Neoplatonism, Peripatetic philosophy, and the vast tradition of Islamic philosophy, but familiarity with contemporary analytic philosophy as well. As a result, the presentation is dense, at times terse and fragmented, but worth an engaged study, nevertheless.

Rizvi is at pains to show that Mulla ạadrā’s solution to the classic problem of the One and the many, which is described as "the primitive ontological struggle to reconcile one's phenomenal experience of multiplicity, of many existents, with the notion of unity, of One Being" (39), is also fundamental to Ṣadräs metaphysics as a whole. At the very heart of Șadräs solution is the Aristotelian notion of pros hen homonymy of the term "being", i.e., the term is not a universal or a genus, and that it is connected to "primary being," or a static category of substance. Unlike Aristotle and Avicenna, however, Șadräs notion of being is dynamic, "processual," and "modulated" by intensities (the analogy to music is operative for Rizvi), which is also reflected in Șadräs notion of a substance in motion. Like Ṣadrā, Avicenna too acknowledges four modes of being in his pluralism-extra-mental, mental, in linguistic expression, and in writing-but Şadrā is able to connect these otherwise different and independent modes into a hierarchical unity, thanks essentially to the scales of intensities in "the pyramid of being" (clearly a Neoplatonic influence, as Rizvi stresses). It is due to this identity-in-difference permitted by Ṣadrian ontology that we find a systematic and graded approach to the semantics of being (chapter 3, where being in linguistic expression
and in written form are collapsed into one category by Rizvi), mental being (chapter 4), and real being (chapter 5) in Rizvi's account of Ṣadrä's philosophy. Despite the disjointed nature of Ṣadrä’s Asfär as a text, it is surprising, therefore, that Rizvi would label Ṣadrä's philosophy as being "anti-systematic" (30).

The author's helpful introduction is dedicated to critically detailing the myriad ways in which Ṣadrā has been treated in the burgeoning literature on him, which include "Esotericism," "Comparative philosophy", "Avicennianism," and "Iranian nativism." While critical of each individual approach, Rizvi duly helps himself to the achievements of each in order to tackle Șadra̋s extensive philosophy. Chapter 1 lays down some preliminaries, such as his presuppositions concerning the role of pedagogy and oral transmission, and, of course, methodological and textual considerations.

After an essential chapter plotting out the history of being, chapter 3 begins with the semantics of being, which is supposed to be vital to Rizvi's interpretation of Ṣadrā, for it pays attention to an area largely ignored in the literature and permits Rizvi to engage analytic philosophy. Sadräs theory of meaning, truth, and reference are explicated, and his "realism" is stressed. While Quine and Kant are used to motivate certain problems of predication of existence and being (and their privation), Șadräs solutions are based on presuppositions and a vantage point so different from Quine and Kant that it is hard to understand why this would be a good strategy-unless, of course, more was dedicated to motivating the comparison to begin with, which is not the case (I return to this point again below). At any rate, the realm of semantic being is at the lowest rung of the pyramid of being, where dualisms remain, and where word, concept, and extra-mental reference are distinct yet semantically (and I would say, intentionally) connected.

Chapter 4 moves us up to the next level of being, the so-called "mental being" (wujūd dhihnī). This is probably Rizvis most important chapter, but also his most difficult. Not in their original order, the crucial aspects here are: (a) the distinction between mental beings and the beings of the mind; (b) the fact that concepts may be (as they are in the semantic realm) mental beings, but they may be, at a meta-level, beings of the mind, and are, as such, "secondary intelligibles," meaning they are "indeterminate insofar as they neither exist purely mentally or extra-mentally" (95); and (c) an
introduction to the Suhrawardian notion (adapted by Ṣadrā) of "knowledge by presence," which is posited in contrast to a semantic correspondence theory of truth (as outlined in the previous chapter), thus presumably escaping any kind of "me-world" dualism (89).
"Knowledge by presence" is a type of non-propositional knowledge in which the very presence of being, as an intuitional experience, justifies belief-it in fact justifies itself. It is a direct knowledge made possible by the intellecting subject's unification with the intelligible object. This leads Șadrā to an epistemology of particulars and an interesting form of intuitive empiricism. Despite the unity achieved between subject and object, this kind of knowledge is not forever indiscriminate, and may be "forged [into] a linguistic discipline," or "metalanguage" which is not public (93).

It is in this context that Rizvi takes up the apparent challenge presented by Wittgenstein's "private-language argument," which is construed as being in opposition to a "mental language" and is necessary, in different ways, to (a-c). Apart from the fact that Wittgensteinians have identified three or four dissimilar privatelanguage arguments (Rizvi only considers one of them), whichever of Wittgenstein's arguments one considers, they all assume the impossibility of intellection or intuition, which is essential to Ṣadrā’s perspective. Unless one tackles head-on this implicit rejection not only in Wittgenstein but also in much of analytic philosophy, I do not see the relevance of bringing up the private-language argument in this context, as it merely begs the question.

In the final chapter, we come to the highest level of being, namely, real being. The challenge here is primarily to demonstrate the reality of being in its concrete, actual, and extra-mental mode. Such a demonstration is necessary for a variety of reasons, one of the most important being the challenges posed by the Illuminationists' arguments against the reality of being. Since much of the chapter has been covered by others in Șadrian literature, Rizvi navigates a well-trodden path, highlighting some fascinating aspects along the way, such as the fine balance achieved by Șadräs "third way" between monism (Akbarians) and pluralism (Peripatetics) (here, one begins to fully appreciate the synthetic genius of Șadrā). From this perspective, namely at the highest level of being, one also comes to piece together loose aspects of the preceding chapters. In fact,
the reviewer would recommend reading the last chapter before beginning chapters 3 and 4 .

It should also be noted that no mention of, or comparison with, analytic philosophy is attempted in chapter 5, perhaps due to the esoteric nature of Șadrä's metaphysics. Also note that in Rizvi's summary of Ṣadräs argument for the existence of God, (126), there is a serious circularity-being and God are both already and explicitly in the premises. I am not sure if this circularity is a result of the author's summary or Șadräs thinking. Rizvi, to be sure, points out some difficulties with Șadräs argument (i.e., that it might be a tautology), but fails to notice the circularity embedded in his own presentation.

Finally, having arrived at the highest "intensity" of being, we still have not arrived, for as Rizvi aptly puts it, "Ultimately, modulation by intensity of being is a working theory, an explanation (bayān) of truth but not truth itself. The latter exists but is not so easily available to us through discourse or analysis" (135). However similar this may seem to the "mysticism" which Wittgenstein was accused of in his discarding the ladder of the sayable once he had arrived at what could only be shown, Rizvi emphasizes that in Ṣadräs case it has more to do with his philosophy's openness. In order to "provide an important corrective to the Nasr/Corbin approach" to Ṣadrā studies (11), Rizvi proposes that we take analytic philosophy seriously in relation to Șadrā. Yet, for this reviewer, such an approach remains an open question, given the ultimate role played by ineffability in Sadrä’s metaphysics.

In addition to being a kind of corrective, I do, however, see the significance of comparing Șadrā’s thought to elements of analytic philosophy, and to this end, I would make a few brief and general proposals, mainly in light of Rizvi's treatment. First, there is a recent rise of interest in non-propositional knowledge among philosophers, some of which might be of direct relevance and interest to the issues raised in chapter 3.

Second, the problem of intuitive knowledge plays a significant role in the development of early analytic philosophy, most notably in issues related to the nature of geometry, Frege's "third realm," and in the prevalent discussions surrounding immediate and direct knowledge by acquaintance. It might be particularly fruitful, especially in the latter case, to seriously assess the arguments for and
against intuitive knowledge as presented, for example, in the disputes between Henri Bergson and Bertrand Russell. Doing this might provide the arguments that lie at the root of analytic philosophy's overall rejection of intuitive knowledge, which may be employed in a direct engagement with Ṣadrās treatment of knowledge by presence and intellection.

Third, considering the amount of space Rizvi dedicates to the fascinating issues surrounding non-existent objects and predication, it might also be worthwhile to note another fertile area of comparison, namely, Meinongian ontology-a tradition in analytic philosophy still very active today. Of particular interest may be Meinong's introduction of the distinction between "Sein" and "So-Sein," which was meant to transcend the restrictions in the fundamental use of "the rule of presupposition" (qā̄ida far'iyya) (cf. 8o) by Ṣadrā and others.

## Ibrahim Kalin

# KNOWLEDGE IN LATER ISLAMIC PHILOSOPHY: MULLA $\operatorname{S} A D R \bar{A}$ ON EXISTENCE, INTELLECT, AND INTUITION 

New York: Oxford University Press, 2010. xxii + 315 pp.
Reviewed by: Ahab Bdaiwi

The present work is a revised edition of Kalin's doctoral dissertation at George Washington University (2002) carried out chiefly under the supervision of Seyyed Hossein Nasr, who, alongside the late Henry Corbin, inaugurated Sadrian studies in the West. This book attempts to accomplish two tasks, namely, examine Ṣadräs acute knowledge of the history of philosophy in the Greco-Islamic context, and his analyze his audacious (successful?) attempt to recast knowledge in terms of existence and its various modalities against the backdrop of Avicennan philosophy and the kaläm tradition. The work is appended with a translation of a short treatise on the unification of the intellect and the intelligible, Risäla fi ittihād al-āqil wa-l-máqūl, that illustrates Ṣādrās critiques of Avicenna's notions of knowledge as abstraction and representation, as well as the "theological corrections" Ṣadrā made to avoid the pernicious results of the representational theory of knowledge, in which God's detailed knowledge is posterior to His essence.

The work is thus comprised of three chapters and an appendix. Chapter 1 is divided into two parts. The first part considers the Greco-Alexandrian context and traces the history of the unification argument from Plato to Plotinus Islamicus. Starting with Plato, Kalin does well to highlight Plato's explanations of the relation between eidos and nous as primary agent of intellection, thus laying the foundations (at least according to Ṣadrās readings of Plato) for a relation of sorts between forms and intellect and, consequently, depending on the credibility of Șadräs 'hermeneutical appropriations,' making knowledge a mode of participation in the intelligible realm, viz., the Platonic Forms.

In reading the 'first teacher,' Mullā Ṣadrā, like his medieval predecessors, presents Aristotle as the author of the Uthūūujiyāa and a disciple of Plato, who blends in with Ṣadrảs reformulations
of philosophy as being illuminated by mishkāt al-nubuwwa. Ṣadrā makes no attempt to explain convincingly how he managed to overlook Aristotle's rejection of Platonic forms, temporal origination of the cosmos, and eternity of the soul; however, Ṣadrā highlights excerpts from the De Anima that appear to support the notion of unity between the intellect and the intelligible and thereby lends support to the unification argument. The reader, however, is left with at least one unanswered question: how does Ṣadrā manage this instance of hermeneutical appropriation by reconciling Aristotle's claim that knowledge is abstraction and S Sadräs claim that knowledge is presence?

The next section considers Alexander of Aphrodisias' influence on Sadräs predilections for existence as the ontic ground for sensibilia and intelligibilia, which, like much of Sadrä’s cosmology, is 'separated' by existential intensity or diminution. Alexander's deliberations on the unity of the intellect and the intelligible is discussed and quoted in Ṣadräs treatise on the subject; though Sadrā makes no valid excuse for placing Alexander within a Neoplatonist tradition. Alexander was, in fact, committed to Aristotelian noetics and had no obvious inclination toward Neoplatonism. The section is concluded with a discussion Ṣadrä’s relationship with Plotinus' corpus that features explicit endorsements of the unification argument upheld by Ṣadrā.

The second part of chapter 1 highlights Ṣadrā’s struggle to make a case for the unification argument against the backdrop of its rejection (at least in instances other than the case of God) by Muslim Peripatetics. Ṣadrā was perhaps unaware of al-Kindī's treatise entitled 'On the Intellect'; a treatise that makes clear that his position on the unification argument was ambivalent. It is probable that al-Kindī deliberately avoided passing personal judgement on the problem of unification on religious grounds because of its far reaching implications. As for al-Fārābī, there are two possible readings into how he deals with the problem of unification. In one reading, al-Färābī appears to reject the unification argument while accepting its vocabulary; in another reading, al-Fārābī appears to partially endorse unification based on his six-fold construction of the intellect. On this last, Sadrā appears to make another opportunistic attempt to construct a genealogy for his own goals by amplifying al-Fāräbī’s limited acceptance of unification. Kalin would have
done well to explore this hermeneutical appropriation technique favored by Ṣadrā.

Avicenna's erudition and philosophical acumen was held in high esteem by later philosophers, including Mullā Ṣadrā, who often referred to him as the 'chief master.' While there is valid evidence to suggest Avicenna's acceptance, albeit hesitant, of the unification argument in the case of God, he vehemently rejects it elsewhere and warns of its serious ramifications. In Avicenna's view, acceptance of the unification argument not only departs from traditional philosophy, but also amounts to metaphysical deception and sophistry, a mere poetical interplay of words to claim that something becomes identical with something else without either the former or the latter being destroyed. Interestingly, Avicenna later appears to contradict himself by endorsing unification in the case of self-knowledge and divine intellection, an eventuality that lends itself to Ṣadrảs argument.

Suhrawardi is the last figure taken up in chapter 1. From the outset he appears to echo the Peripatetic position by rejecting the unification argument because of the impossibility of substantial identification. The major problem for Ṣadrā in this case is Suhrawardi’s development of a theory of knowledge that circumvents the unification argument; a theory that was later adopted by Ṣadrā with some slight modifications. In response to Suhrawardi's theory of knowledge, Șadrā has recourse to his theory of 'gradation-in-existence'. In an attempt to respond to Suhrawardi's imperviousness to unification, Şadrā argues that the difference between them stems from different ontologies.

Chapter 2 presents a comprehensive examination of Ṣadrās theory of knowledge and its similitude to existence. In fact, Sadrā makes it clear that knowledge is an exercise in ontology based on a symmetrical relationship between ontological intensity and epistemic credibility; moreover, in relation to the soul's epistemic standing, disembodiment becomes a condition of intelligibility, and intelligibility is closely correlated to higher levels of existence, thus echoing mystical themes in which knowledge, existence, and axiology are synonyms for the same reality.

After discussing Șadräs critiques of the four theories of knowledge found in the major works of the Peripatetics, the chapter is brought to a close with an excellent set of deliberations on selfknowledge and God's knowledge of things as paramount examples
of Ṣadrä’s unification argument. Kalin notes one inconsistency and makes a strong case to point out the tension between the unification argument and the Peripatetic notion of the active intellect that is upheld by Ṣadrā. Kalin is correct to suggest Ṣadrā could have developed his theory of knowledge without requiring the active intellect of the Peripatetics.

Chapter 3 explores the implications of Sadräs onto-epistemological model that highlights Ṣadrā 'rational mysticism' as a basis for knowledge. In Ṣadräs thought, the meaning of things is revealed to the knower through his unification with the intelligible world on the one hand, and with the world of separate spiritual realities, on the other. All this hinges upon releasing oneself from material limitations. The chapter is concluded with a discussion on Șadrä’s doctrine of 'ontological vitalism', according to which beings interact with the world through various modalities of existence marked by intensity or diminution.

The appendix is a translation of Ṣadräs treatise in defense of the unification argument and a point-by-point response to Avicenna's rejections of unification. While the Risäla echoes many points made in the Asfär, it remains, nonetheless, an important treatise in post-Avicennan philosophy. The translation of the text contained in the work is fluent and reads well; neologisms and ambiguous terms are discussed as necessary.

Kalin's work is a welcome contribution to Ṣadrā studies. Useful translations of texts and clarity in exposition makes this contribution invaluable to anyone working in the field of Islamic philosophy.

# THE FUNDAMENTAL PRINCIPLES OF MULLA SADRA'S 

 TRANSCENDENT PHILOSOPHYLondon: London Academy of Islamic Studies, 2009. 238 pp.

Reviewed by: Sayeh Meisami

Reza Akbarian's The Fundamental Principles of Mulla Sadra's Transcendent Philosophy, published by London Academy of Iranian Studies in 2009, is a defense of Islamic philosophy in the face of those who pronounced it dead after Averroes. At the same time, it is also an introduction to Mullā Sadrä’s philosophy. Akbarian, a long-time scholar and teacher of Sadrā, talks on behalf of a great number of contemporary Muslim thinkers who are proud of the Islamic roots of Șadräs "transcendent philosophy," not apologetic about it. Next to an analysis of the components of Șadräs system, made up of revelation, intellection, and illumination (34), the book also regards its synthetic systematization as a major step forward in the spiritualization of philosophy that began before Ṣadrā, courtesy of Ibn 'Arabī and Suhrawardī. Mullā Ṣadrā is proudly presented as "a mystic and religious philosopher who benefits from mystical and religious achievements and particularly the doctrines of Shiite Imams in building up his philosophical framework" (267).

The book follows Mullā Ṣadrảs methodology, elucidating almost all of his major ideas against the background of both Peripatetic and Illuminationist philosophies. Thus, one of the greatest advantages of Akbarian's book is in placing the novelties of Ṣadrä's thought in the context of the Islamic tradition as a whole. In explaining Sadräs ontology, epistemology, cosmology, psychology, theology, and eschatology, we therefore find that Akbarian brings to the fore not only STadräs philosophical and mystical sources, but also the Qurānic influences upon his thought, all of which, Ṣadrā insists, serve as the sources of inspiration for his findings.

With the latter point in mind, we see, for example, that Mullā Sadrā managed to harmonize the philosophic concept of "effect" with "manifestation" within the domain of mysticism on the one hand, and "the revealed verses" of the Qurān, on the other (138). Moreover, the book does not merely take Ṣadrảs holistic approach for granted,
but expounds all of his teachings based on his essential principles, most importantly the primacy and unity of being. Akbarian brings to light Mullā Sadrä’s success in revolutionizing Islamic philosophy based on this principle. Indeed, Şadrā was convinced that once the oneness and graded nature of existence was apprehended by the soul, a host of philosophical problems (such as the nature of knowledge, the origin and destiny of the cosmos, the relationship between the human body and soul, the nature of God's attributes), and a number of eschatological mysteries, can be solved.

Interestingly, though the book is offered as an introduction to Mullā Ṣadrā, it also seeks to compare him with some important western philosophers, chiefly Kant. In a chapter which is mainly devoted to the meaning of existence in Ṣadrā and Kant, we see that although their views of existence as a predicate may seem similar at first glance, their approaches to existence are as different as their worldviews. Both Kant and Șadrā believe that existence is not an analytic part of the concept of which it seems to be predicated, inasmuch as in saying "A exists" nothing is affirmed of A over and above what the concept already includes. However, while to Kant existence is merely "copulative," for Ṣadrā, not only is it "predicative" in the sense of having a real referent outside the conceptual sphere, but it is also the only reality out "there" (p. 91). According to Kant, existence as a predicate, in an existential proposition, does not add anything to its subject; this is because it is not a real predicate at all. Mullā Ṣadrä’s rejection of the predicative role of existence in existential propositions is based on his belief in the primacy of existence in reality. In "A exists," what is real is an existence which is reflected in the mind as "A," and not otherwise.

Unfortunately, the attempts at comparison do not always go very well. Although the writer himself is aware of the differences of worldviews and conceptual systems between Ṣadrā and the giants of western philosophy (p. 85, 86, 231), he sometimes seems to ignore this and builds his comparative study on a misinterpretation of the western side. Moreover, in cases other than Kant, comparisons appear only in passing, which in some cases result in imprecise evaluations. For example, it is erroneous to consider the role of time in the trans-substantial motion of the human soul as "very close" to what Heidegger proposes, since, contrary to what Akbarian
suggests, there is no trans-substantial motion within the context of continental philosophy (cf. p. 231).

With respect to imprecise evaluations, for instance, we read that, "no other independent school of philosophy has been developed either in the East or the West to possess such universality, all-inclusiveness, and answerability to problems" (p. 47). And in the note on this statement, the writer denies such a perfect systematization even to Hegel, referring to his thought as "imperfect" (p. 78, note 24). I believe that if the book had devoted more space to comparing Mullā Sadrā with the likes of Hegel and Heidegger, it may have reached conclusions that would have shed more light on the deep differences between Islamic philosophy and late modern and contemporary western philosophy. In other words, although it is not necessary for an introductory book to engage in comparative categories, when it does so, it should be more precise.

All in all, Akbarian's book is certainly worth reading. It is hoped that future editions will correct the many linguistic errors, solecisms, and unnecessary repetitions found throughout the work. It would also be good to see, where possible, the presence of already-existent English philosophical terms employed for much of the cognate terminology of Islamic philosophy, thereby making the latter's thought-world seem less 'foreign' and, as a result, more accessible.

## Journal of Islamic Philosophy

## CALL FOR PAPERS

The Journal of Islamic Philosophy is published annually; submission deadlines are January 15 and June 15. The journal is interested in papers on ancient and modern Islamic philosophical topics; it cannot consider more general works on modern Islamic affairs, rather its sole focus is philosophy. The paper should present a central argument and contain rebuttals to reasonable refutations of the argument. Studies of the classical philosophers of Islam in the context of modern Western philosophy are especially encouraged.

## Guidelines

- Please include a 100 - to 150 -word abstract and a brief biographical statement.
- Papers should not exceed 15,000 words.
- Please include complete citations in the form of embedded footnotes.
- The Journal of Islamic Philosophy is published in English.
- The editors of the journal reserve the right to make necessary editorial and design changes prior to publication.
- Please see the website for details on formatting and use of diacritics.

## Submission

Papers may be submitted via email to editor@muslimphilosophy. com in MS Word (.doc) or (.rtf) format only. For more information on the journal style guide, please contact the editor, or see http:// www.muslimphilosophy.com/journal/cfp.html.

## On Mullā Ṣadrã

$S$adr al-Dīn Muhammad b. Ibrāhīm Qawāmī Shīrāzī, known as Mullā Șadrā, was the leading Iranian Shīī philosopher of the Safavid period. He was born in Shīrāz in 979-80/1571-2 and died in Basra in 1050/1640 on the pilgrimage to Mecca.

Mullā Ṣadrā synthesized existing systems of thought into a new philosophical system, usually referred to as "Transcendent Wisdom" (al-hikma al-muta'āliya). He was known to borrow from earlier schools of thought, including kalām theology, Ismá illism, Avicennan metaphysics, Ibn al-'Arabī, the Ishrāqī philosophy of Shihāb al-Dīn Suhrawardī, and the school of Isfahan. To these he added several original doctrines, most notably (1) the basic reality of existence ( $w u j \bar{u} d$ ) as against quiddity ( $m \bar{a} h i y y a$ ); (2) the unity of intellect and intelligibles; and (3) the movement of all beings in their substances, as well as in their qualities (haraka jawhariyya).

Among his works, the most important are al-Hikma al-muta‘āliya fil-asrār al-‘aqliyya al-arba'a, al-Hikma al-arshiyya, Kitāb al-mashäiir, Mafätīh al-ghayb, al-Shawāhid al-rubūbiyya, Sharh Uṣūl al-käfi, and the Sih aṣl (an important Persian work). Mullā Ṣadräs influence was relatively limited after his death in the eleventh/seventeenth century, but increased during the nineteenth century; in more recent times, his works have become widely popular in Iran, Europe, and America.

## Colophon

This volume is typeset in Adobe Minion Pro, a typeface designed by Robert Slimbach. The OpenType version was released in 2000. Minion Pro is inspired by classical, old style typefaces of the late Renaissance, a period of elegant and highly readable type designs. It combines the aesthetic and functional qualities that make type highly readable for text publishing needs. The main text of this volume was typeset in 11/13 point. The titles were set in Brioso Pro also by Robert Slimbach. The typefaces were modified to create additional glyphs needed for the transliteration needs of the Journal.

[^4]:    12 Qurāān 30:30.
    13 Qurāān 7:8-9; 21:47.

[^5]:    14 See Qurān 49:13: Truly the most noble of you before God is the most reverent.
    15 See Sharh, 61, where Șadrā says that "the provision ( $z \bar{a} d$ ) of the Hereafter is knowledge and piety (taqwā)," perhaps invoking Qur'an 2:197, where it says that the best provision $(z \bar{a} d)$ is taqwa .
    16 See also Qur'ān 6:50; 11:24; 13:16, 19; 35:19; 40:58.
    17 See, e.g., Qurān 3:7, 190; 13:19; 38:29.
    18 See, e.g., Qurān 7:179; 10:7; 16:107-108.
    19 See, e.g., Qurān 3:190-191; 10:24; 13:3; 16:11; 25:61-62.
    20 See, e.g., Qurān 7:146; 21:1.
    21 Sharh, 74 ; a similar point is made on 53 . See also 127 , where Șadrā comments, "knowledge is the root of every righteous act, whether it is an act of commission, such as worship, or an act of omission, such as renunciation (zuhd)."

[^6]:    22 Quoting the hadith he is commenting upon here, which is found on 14-15 of the Sharh.
    23 Sharh, 15-16.
    24 Ibid., 22-23.

[^7]:    25 Asfär, 8:134.
    26 Ibid., 1:108-115.
    27 Sharh, 5.

[^8]:    28 Ibid., 72.
    29 For Ṣadrā, both knowledge and being (wujūd) are analogous to light. For references to knowledge as light, see, e.g., Sharh, 96. It is, however, an "intellectual" light, not a "sensible" light, in that unlike sensible light, it is "radiant by its own essence" ( 96 ). For the analogy between being and light, see, e.g., Asfär, 1:63-64.
    30 Sharh, 4.
    31 Ibid. See also 28.

[^9]:    32 Ibrahim Kalin, Knowledge in Later Islamic Philosophy: Mullā Sadrā on Existence, Intellect, and Intuition (New York: Oxford University Press, 2010), xv.
    33 This is a reference to the Qur'ānic dyad, "sijjīn" and "illiyūn" (Qur'ān 83:7-8, 18-19), which some interpret as referring to the lowest level of Hell and the highest realm of Paradise, respectively.

[^10]:    34 An allusion to Qur'ān 24:35, the "Light Verse."
    35 A reference to Qurān 57:12.
    36 Sharh, 51-52.
    37 Sharh, 8-9; see also 76, where he says that the acquisition of knowledge is obligatory on the basis of sunna, consensus, and intellectual proof.

[^11]:    42 Ibid., 84.
    43 See Sharh, 3-4 where Șadrā cites several ahādīth on the status of the "men of knowledge" in the next world on account of their having taught others.
    44 Ibid., 88.

[^12]:    see Ṣadrā, 'Irfän va‘ārifnamāyān, trans. Bīdārfar, 97-98. In the passage above, however, he indicates that gaining real knowledge from others must precede this, at least for most people.
    47 Sharh, 50 ; see also 51 , where Ṣadrā says, ". . . the life of the Hereafter is life through knowledge."
    48 Ibid., 69-70. For the role of perception in the experience of the hereafter, see Asfär, 9:121-125.
    49 Sharh, 297; 315-316.
    50 Ibid., 211-212; see also 145, where he states, "But as for the supreme triumph in salvation, none attains it save the gnostics ('ärifin)."

[^13]:    54 A reference to Qurān 4:98. A hadith attributed to the Imāms adduces this same Qurānic verse to explain the status of those who do not subscribe to the Shici perspective, but fail do so out of inability, rather than willful rejection. See Kulaynī, al-Käfi, 2:383-385; Abū Jafar Muḥammad b. al-Ḥasan al-Ṭūsī, Ikhtiyār márifat al-rijāl, ed. Ḥasan al-Muṣtafawī (Mashhad: Dānishgāh-i Mashhad, 1969), 141-142.
    55 Sharh, 211-212.
    56 Ibid., 119-120; see also 214, where Şadrā states that one of the exquisite torments of the false or worldly knower in the hereafter is witnessing his former students who, unlike himself, took his teachings sincerely and used them to spiritually transform and advance themselves, in the bliss of paradise, while he is in hell; indicating that the power of knowledge exists independent of its conduit.

[^14]:    57 See Kalin, Knowledge in Later Islamic Philosophy, 201, and Rizvi,"Reconsidering the Life of Mulla Sadra Shirazi (d. 1641): Notes Toward and Intellectual Biography," Iran 40 (2002), 187.
    58 Sharh, 44.

[^15]:    69 Ibid., 4-5.
    70 Ibid., 55, 60.
    71 Ibid., 83 .
    72 See, in general, Rizvi, "Reconsidering the Life of Mullā Ṣadrā." Nonetheless, hints of political motivations behind at least some of his criticism can be seen in places where he chides the "worldly scholars" for aiding the "sulteāns of oppression" and the "commanders of injustice" (umarāal-jawr); see Sharh, 135.

[^16]:    73 Ibid., 57, 66-67.

[^17]:    76 Ibid., 211.

[^18]:    81 Ibid., 74-75.
    82 Ibid., 74, where he quotes Suhrawardi's Hikmat al-ishrāq, although the editor notes that the corresponding passage is found in Suhrawardī's Hayākil al-nūr.
    83 Kulaynī, al-Käfi, 1:269-270.
    84 Qur'ān 39:9.

[^19]:    99 See, e.g., Rizvi, Mullā Şadrā and Metaphysics: Modulation of Being (London: Routledge, 2009), 129-130, and Henry Corbin's introduction to his translation of Șadrảs Mashā́cir, 13-15, 80-82.
    100 See Sharh, 43, 66-67, 72, 157-158.
    101 Ibid., 41, 43.
    102 Ibid., 91-92.

[^20]:    103 Ibid., 41.
    104 See also, Sharh, 49-50, where Șadrā notes that a follower of the Imämī Shīi sect has a responsibility to be well-informed and have a deep understanding of the principles of religion and must not be a "commoner" who follows the doctrinal positions of others blindly.
    105 A reference to Qurān 24:35.
    106 Sharh, 48.

[^21]:    107 Ṣadrā distinguishes between those who identify themselves as Shīī because of their love and devotion to the ahl al-bayt, and those who truly understand the esoteric sciences taught by the Imāms, and the true interpretation of the Qur'ān and the sayings of the Imāms (see Sharh, 66-67), a distinction also articulated in the Shīi hadith tradition.
    108 See, e.g., Sharḥ, 49-50, 66-67.

[^22]:    109 Ibid., 290.
    110 Ibid., 290-291.
    111 See, e.g., Ibid., 322-323.

    39 According to the Qurān, every day He (i.e., God) is upon a [different] task (55:29).

[^54]:    1 For a detailed treatment on the Asfär, see Seyyed Hossein Nasr, Șadr al-Dīn Shïräzī and His Transcendent Theosophy (Tehran: Imperial Iranian Academy of Philosophy, 1978).
    2 "The carnal soul that incites to evil" (al-nafs al-ammāra bi-s $\vec{u}$ ) and "the soul at peace" (al-nafs al-mutmainna) are Qur'ānic terms for the different stages of realization or consciousness of the human soul.
    3 The term "al-Hikma al-Mutáāliyya," which means "an exalted or transcendent form of wisdom" is used by the disciples and students of Mullā Ṣadrā to refer to their master's philosophy and distinguish it as a new philosophical perspective and school. Mullā Ṣadrā himself did not refer to his philosophy directly and specifically by this term but he used it in the title of two of his works: the Asfär and al-Masāil al-qudsīyya.

[^55]:    6 For example, in his Kitäb al-najāt, Ibn Sīnā’s discussion of the soul forms the sixth section of the second book devoted to natural philosophy ( $\operatorname{tabī} \bar{i} i y y a \bar{t})$.

    28 'Arshīya, 256; Wisdom of the Throne, 173.

[^64]:    9 For an in-depth analysis of the sources, structure, and content of this work, see Rustom, Triumph of Mercy, chs. 2-5, 7.
    10 Ṣadrā, Tafsirr, 1:187 to the end of vol. 3; Majmū ${ }^{c} a t, 41-289$. Selections are translated in Jambet, Mort et résurrection en islam: L'au-delà selon Mullâ Sadrâ (Paris: Albin Michel, 2008), 209-218.
    11 At Tafsīr, 1:349, Șadrā explicitly makes mention of his Tafsīr Sūrat al-fätiha.
    12 Șadrā, Tafsīr, 1:496-513; 2:377-413; 3:475-528.
    13 Ṣadrä's view on the question of Hell's eternality finds its most complete expression in his Tafsir Sūrat al-fätiha, for which, see Rustom, Triumph of Mercy, ch. 7.

    14 For a helpful discussion of this problem in Islamic thought, see Eric Ormsby, "The Faith of Pharaoh: A Disputed Question in Islamic Theology", in Reason and

[^65]:    Inspiration in Islam: Theology, Philosophy, and Mysticism in Muslim Thought, ed. Todd Lawson (London: I.B. Tauris, 2005), 471-489.
    15 Ṣadrā, Tafsir, 6:1-135/Majmū́cat, 375-457. Selections are translated in Jambet, Mort et résurrection en islam, 232-244.
    16 Muḥsin Bīdārfar, "Taqdīm," in Ṣadrā, Tafsīr, 1:110-11; Rizvī, Mullā Ṣadrā Shīrāzī, 77-87. For Ṣadrä’s list, see Tafsīr, 6:6.

[^66]:    17 Ṣadrā, Tafsīr, 5:10-480/Majmū‘at, 457-493.
    18 See the entry on the Tafsir Sūrat al-jumu'a below. For an introduction to Kāshānī's life and thought, as well as a translation of more than half of his published works, see William Chittick, The Heart of Islamic Philosophy: The Quest for Self-Knowledge in the Writings of Afdal al-Dīn Käshān̄̄ (New York: Oxford University Press, 2001).

[^67]:    20 The discussion is prompted by the famous hadith of awakening. See Rustom, "Psychology, Eschatology, and Imagination in Mullā Ṣadrā Shïrāzī’s Commentary on the Hadith of Awakening," Islam and Science 5, no. 1 (2007): 9-22.
    21 Ṣadrā, Tafsīr, 6:140-327; Majmū $\mathfrak{}$ at, 518-565.
    22 See Ṣadrä, Sharh Uṣūl al-käfi, ed. Muḥammad Khwājawī (Tehran: Mu’assasa-yi Mutạalacāt wa-Taḥqiq̄āt-i Farhangī, 1366Sh/1987), 3:116. The text in question makes it clear that Șadräs Tafsīr Ayat al-kursī (a very early work) was written some time after his Tafsïr Sūrat al-hadīd.
    23 Șadrā, Tafsirr, 6:331-89.

[^68]:    24 Ṣadrā, Tafsīr, 7:8-134; Majmū‘at, 495-518. Selections are translated in Jambet, Mort et résurrection en islam, 245-263.
    25 At Tafsïr 7:93, Ṣadrā alludes to his Tafsīr Sūrat yāsīn, which was written in 1022/1621.
    26 Ibid., 7:36-7.

[^69]:    35 Șadrā, Tafsïr, 7:139.
    36 Ṣadrā, Tafsir, 7:308-59; Majmū‘at, 589-598.
    37 Șadrā, Tafsīr, 7:308.
    38 Ibid., 7:309.

[^70]:    Sadrā, Tafsīr, 7:362-407; Majmū̄at, 598-607.
    Cf. Kalin, "An Annotated Bibliography," 38; Rizvi, Mullā Ṣadrā Shīrāzī, 85.
    Ṣadrā, Tafsīr, 7:410-44; Majmū'at, 607-613.
    Ṣadrā, Tafsīr, 7:435.
    Rizvi, Mullā Ṣadrā Shīrāzī, 59.

[^71]:    44 For a helpful discussion of this phenomenon, see Shigeru Kamada, "Mullā Ṣadrā Between Mystical Philosophy and Qur'ān Interpretation through His Commentary on the 'Chapter of the Earthquake,"' International Journal of Asian Studies 2, no. 2 (2005): 275-289.
    45 Șadrā, Tafsīr, 4:8-342/Majmū ${ }^{\text {atat, 290-357. Selections are translated in Jambet, }}$ Mort et résurrection en islam, 264-285.

[^72]:    48 For discussions of Ṣadrā’s relationship to Sufism, see Carl Ernst, "Sufism and Philosophy in Mullā Ṣadrā," in Mullā Ṣadrā and Transcendent Philosophy (Islam-West Philosophical Dialogue: The Papers Presented at the World Congress on Mullā Ṣadrā, May, 1999, Tehran) (Tehran: SIPRIn, 2001), 1:173-92; Janis Ešots, "Mullā Șadrā’s Teaching on Wujūd: A Synthesis of Philosophy and Mysticism" (PhD diss., Tallinn University, 2007).
    49 Șadrā, Majmū̌at, 614-616.
    50 See Āqā Buzurg, Dharī̄a, 4:278.
    51 In two places, the text mentions the tafsir of a certain "Alī b. Ibrāhīm," which is most likely a reference to the important early Shīi Qurān commentator, al-Qummī (d. 307/919). Șadrā also makes a somewhat opaque reference to the "shiqshiqiyya", which he appears to link to the "people of intelligence" (ahl al-fatāna), from whom the reality of the final hour is not hidden. See Şadrā, Majmū̌uat, 615. To readers familiar with the Nahj al-balägha, the term shiqshiqiyya evokes the book's famous third sermon.

[^73]:    52 See Şadrā, Tafsīr, 6:6 and above.
    53 Ṣadrā, Mafātīh al-ghayb, ed. Muḥammad Khwājawī (Beirut: Mu’assasat al-Tārīkh al-‘Arabī, 2002), 75-782.
    54 See Rustom, Triumph of Mercy, ch. 1.
    55 Ṣadrā, Mafätīh, 787-881.

[^74]:    56 Ṣadrā, Asrār al-āyāt wa-anwār al-bayyināt, ed. S. M. Mūsawī (Tehran: Intishārāt-i Hikmat, 1385Sh/2006).
    57 Ibid., 223-522.

[^75]:    58 Ṣadrā, Sih risāla-yi falsafí, ed. Jalāl al-Dīn Āshtiyānī (Tehran: Markazī-yi Intishārāt-i Daftar-i Tablīghāt-i Islāmī, $1379 \mathrm{Sh} / 2000$ ), 257-284. A translation of this work can be found in David Dakake, "Defining Ambiguity: Early and Classical Commentary on the Mutashäbih Verses of the Qur'ān" (PhD diss., Temple University, in progress).
    Cf. Jalāl al-Dīn Āshtiyānī, "Muqaddima-yi mușahhihh," 77. Āshtiyānī's glosses to this text, which are to be found in Ṣadrā, Sih risä̀la, 285-310, mainly consist of those excerpts from the Mafätīh that discuss the Qur'än's mutashäbih verses.

[^76]:    60 Carl Brockelmann, Geschichte der arabischen Litteratur (Leiden: Brill, 1938), Suppl. 2:589.
    61 Āqā Buzurg, Dharíc a, $4: 338$. For my tripartite division of the Dharī $a^{\prime}$ 's entries on Ṣadrā’s Qurānic works, see n. 1 above.
    62 See Encyclopaedia Iranica, s.v.v. "al-Darīca elā taṣānīf al-s-ša" (by Etan Kohlberg).
    63 Āqā Buzurg, Dharī̌a, 4:338. The collection of Șadrā’s tafsirr used by Āqā Buzurg seems to be different from the lithographed edition in my possession, because the latter was printed some ten years earlier and, more importantly, because it does not contain the Tafsir Sūrat al-duhā.

[^77]:    74 The dates given in this tentative chronology are based on the following (in their order of usefulness): Rizvi, Mullā Sadrā Shiriāz̄̄, 51-135; references within Ṣadräs writings; Bidārfar, "Taqdīm", $110-1$; Chittick, "Translators' Introduction," xix-xx.
